# Fully Guaranteed Sawmill Machinery

This is the only kind for you to buy to ensure satisfactory and continuous operation throughout the entire sawing season.

All our sawmill machinery is sold on an absolute guarantee of proper operation and perfect construction.

Naturally, therefore, we buy only the highest grade materials and use only skilled workmen, and everything is built under the most careful supervision.

These things are necessary to produce well built machinery, but they would be useless without proper design—and the “know how” of designing sawmill machinery can only come after long experience.

We have such complete confidence that our machinery is correctly designed that our guarantee is:

**“These machines are guaranteed against defective materials and workmanship for the period of one year, and their proper and successful operation is also absolutely guaranteed. Should any parts fail through defects, we will replace them free of charge, or should any machine not work properly, we will remove it at our expense and refund any part of the purchase money which may have been paid to us.”**

This guarantee goes with all our machines and we have never had to take back a standard machine yet.

And back of this guarantee is our fifty years' experience building sawmill machinery for stationary mills only.

It will pay you to buy your machinery from us this winter.

# **Timber Limits for Sale** **on Georgian Bay**

The undersigned offer for sale in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; Tug Scow and other Lumber Equipment, including boom chains, plows, sleighs, etc.

The Limits, part of which have recently been sold, include: 440 square miles of licensed and deeded Pine, Hemlock, Spruce, Birch and other timber. The licenses from the Ontario Government include all timbers and are not restricted for time. Government dues are as follows: Saw Logs, White Pine, \$1.50 per M. ft., B.M. Saw Logs, Hemlock, Tamarac and other woods 75c. per M. ft. The timber is situated in the Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street. The Canadian Pacific, Canadian Northern and Grand Trunk Railways run through the limits, which makes some of the parcels offered for sale particularly desirable for small mill owners.

A circular giving full information, maps, terms and conditions of sale will be furnished upon application to

## GARLOCK PACKINGS

### Garlock Regular Rings

For all general purposes outside of high pressure work. This Packing is a special grade thoroughly lubricated with the celebrated "Garlock" compound, and is the perfected result of over thirty years experience in manufacturing fibrous Packings.

### Garlock Square Duck Packing

Made of good quality Cotton Duck and friction for cold water.

### Garlock High Pressure Gaskets

Absolutely heat proof, will not vulcanize or blow out under any steam pressure, being made of long fibre Asbestos Brass Wire Insertion.

### Garlock Red Sheet Packing

Made of high grade Rubber compounded in such a way as to give it great strength and reliability.

This Packing has established wide reputation on its own merits.

### Garlock Cloth Insertion Sheet

Used on cold and warm water pipes. Is unexcelled in pliability, smoothness of finish and strength of Cloth Insertion.

### Garlock Rubber Valves

Specially made to meet specific conditions—absolutely unaffected by oils.

Before placing your next order for supplies get our prices on Leather, Rubber and Canvas Belts, Hose, Brass Valves, Babbitt Metals, Saw Blades, Files, Emery Wheels, etc. Write for catalogue.

# Lumber

# Shingles

'MAINLAND' Brand "XXX" 6/2-16" Clear Red Cedar Shingles call for the careful consideration of every buyer and user of Shingles in America to-day owing to the fact that we cater to a high class trade only. Each shingle receives its full share of careful skilled attention and we produce an article of exceptional quality whether you judge them by one piece, one bundle or one carload. Shingles lend themselves to the best architectural designs and our 'MAINLAND' Brand are made from only live green Cedar, which defies time, and maintenance cost is nil.

We are equipped to supply all Lines of Coast Lumber and Shingles in straight or mixed carload lots.

Prompt shipments are a feature with us. Send us your inquiries whenever in the market—they will always have immediate attention.

### "DEFIANCE" WOOD - WORKING MACHINES

"The Imprint of Satisfaction"

Not only the workmanship, but material and general design, is what has put DEFIANCE quality foremost in the woodworker's field. All these sixty-two years of utter success has been due to their ability to "produce results" in an economical way such as has never been equalled by any other method.

We have studied the conditions of the woodworker and have perfected our tools accordingly

*Write us for catalog and prices. It will pay you to standardize with Defiance machines*

This shows some of the designs made with cutter-heads included in regular equipment. There are more in our big circular. Send for it. Those shown in the round are also made octagon or square.

## We Have Solved the Problem of Balusters In Small Lots Made Profitably by Machinery

The improvements in our No. 92 Turning and Variety Machine, and the complete variety of the cutter heads, which are arranged in sections, makes it easy to match very closely almost any detail design, and to make the change to any pattern, ready for turning.

**IN ABOUT 15 MINUTES  
WITHOUT LOOSENING OR ADJUSTING A KNIFE**

This is the only practical machine for the economical turning of inside balusters in small lots of different sizes or design, especially those made in two or three lengths for stair work. It is also an excellent Variety Woodworker, which can be kept profitably employed in countless ways when not in use for making turnings.

# A Belt which Conveys ALL the Power

Practical men know the drainage of power from a slipping belt, *and because they know*, they are buying

## GOOD YEAR RUBBER BELTING

### Which Neither Slips Nor Stretches

It is built up, layer upon layer, of close-woven, long-fibre, cotton fabric, rubberized and cured under Goodyear processes. And every Goodyear belt has in it the lowest possible minimum of stretch, because the belt is "cured" whilst stretched to the limit of safety in a special machine.

#### That is the Goodyear Method of Belt Manufacture

And the result is entirely satisfactory to belt users—a fact to which our enormously increased sales testify. What is the significance of this **CONTINUED SALES INCREASE — 50%** over last year? Simply that Goodyear Belting more than fulfills the claims made for it by the

Goodyear people—who know what a belt should do, and make a belt to do it.

It has cost us less than \$200.00 for claims or adjustment of every kind in connection with our total output for the past two years—a remarkable tribute to Goodyear reliability.

#### Look into the Belt for Yourself—Try to Tear It Apart.

Make a cut in the top layer—and then try to pull it apart. You will get a faint idea of its strength.

That is the result of forcing rubber at tremendous pressure through the fine cotton fabric—separating every strand—thus abolishing all internal friction or grinding. Whilst these layers of fabric are afterwards so compressed as to be almost homogeneous, the finished belt bends easily, the "duck" being so woven as to retain complete pliability in the finished belt.

### For Main Drives and High Speed Pulleys GOODYEAR Belting is the Best

It has all the tensile strength necessary to absorb tremendous strain without slip, stretch or rent. The grip of rubber and the prodigious strength of hard-twist cotton fabric are united, and prove equal to every emergency.

Where the power transmitted is high, and great tensile strength is essential, Goodyear Rubber

Belting proves its worth.

EVERY GOODYEAR BELT IS SUBJECTED TO A STRINGENT TEST BEFORE LEAVING THE FACTORY, and what is more, the materials used in the manufacture are also tested in the Goodyear laboratory before using.

#### IF YOU USE A BELT AT ALL IT WILL PAY YOU TO USE A GOODYEAR

Loss of power is loss of profit—and an inferior belt is dropping power all the time. Goodyear belting quickly earns its cost in power saved and trouble avoided.

#### TWO HUNDRED AND FORTY ROLLS—A TOTAL OF 72,000 FEET

We have just received an order for this quantity of GOODYEAR RUBBER BELTING from one business concern in the west, for the equipment of interior elevators. Such an order shows supreme confidence in the quality of GOODYEAR Belting.

If we have not just the belt you require we will make it for you.

In the choosing of belts our booklet would be of great assistance to you. We supply it free. Write to our nearest Branch for one.

## TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, \$2.00 per year in advance; other  
 foreign countries embraced in the General Postal Union, \$3.00.  
 Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest  
 of, and reaches regularly, persons engaged in the lumber, woodworking and  
 allied industries in every part of Canada. It aims at giving full and timely  
 information on all subjects touching these interests, and invites free discus-  
 sion by its readers.

Special care is taken to secure for publication the latest and most trust-  
 worthy market quotations throughout the world, so as to afford to the trade  
 at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For  
 manufacturing and supply firms wishing to bring their goods to the attention  
 of owners and operators of saw and planing mills, woodworking factories,  
 pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly  
 the most direct and profitable advertising medium. Special attention is di-  
 rected to the "Wanted" and "For Sale" advertisements.

Vol. 33

Toronto, January 1, 1913

No. 1

## The Demurrage Situation

In view of the growing dissatisfaction felt by the lumber trade  
 generally over the increased demurrage charges, it is without doubt  
 necessary for lumbermen to leave no stone unturned to collect as  
 much evidence as possible from their point of view so that, when  
 the time arrives for action to be taken, all necessary statistics may  
 be ready for presentation to the Dominion Board of Railway Com-  
 missioners. The present situation is one which undoubtedly needs  
 the energetic co-operation of both shipper and consumer alike. Al-  
 though at first sight it appears to affect the latter only, it also acts  
 indirectly on the shipper, as, any delay which the consumer may ex-  
 perience in getting his shipments, is retro-active the shipper in regard  
 to his payments.

Under these circumstances it is as well to consider seriously  
 the best methods to be undertaken to arrive at the required data.  
 A circular letter has reached us from the Campbell-MacLaurin Lum-  
 ber Company, Limited, Montreal, which seems to meet the case, and  
 we are therefore quoting it in full.

Board of Trade Building,  
 Montreal, Que., Dec. 6, 1912

Dear Sir,—

In the matter of the temporary advance from Dec. 15, 1912, to  
 March 31, 1913, in the demurrage charges from one dollar per day  
 to two dollars for the first demurrage day and three dollars for the  
 second and succeeding days, Asst. Chief Commissioner D'Arcy Scott  
 states:—

"The Railway Company are on record as stating that, if they get this  
 temporary increase, which I think should be granted, there will be very little  
 congestion, and few, if any, delays in the placing of cars. It will now be  
 incumbent upon them to carry out their undertaking. This temporary in-  
 crease in demurrage charges may be taken as a substantial contribution by  
 the shipping public towards the relief of the difficulties, and it will be for  
 the railway companies to do the rest. Unless greater effort is made by the  
 railway companies, with the view of more prompt transportation and hand-

ling of traffic, I do not believe that the increase in the demurrage charges  
 will make any substantial difference.

"There is almost a unanimity of opinion among the shipping public, that  
 they would cheerfully consent to the increase in demurrage charges, if a  
 measure of reciprocal demurrage was made effective at the same time; that  
 is, if the railway companies would pay a per diem allowance to the shipper,  
 or consignee, for unreasonable delays in the delivery of cars on the part of  
 railway companies. That is a matter which we cannot deal with in this ap-  
 plication."

So as not to have this advance in demurrage charges made a  
 precedent nor made permanent and in order to obtain information on  
 which to base a demand for reciprocal demurrage, it is necessary for  
 the shippers and receivers of freight to keep a written record of the  
 car numbers and initials, points of shipment, dates of shipment, dates  
 of arrival and the dates on which the cars are placed on the proper  
 sidings for unloading on all shipments made between Dec. 15, 1912,  
 and March 31, 1913, and to submit same through their associations  
 to the Railway Commission.

Yours truly,

Campbell-MacLaurin Lumber Co., Ltd.

We understand that some shippers are enclosing to their cus-  
 tomers, with advice notes of shipments, printed forms to be filled  
 up and sent, from time to time, with a letter to the Dominion Board  
 of Railway Commissioners. This is a step in the right direction by  
 the shippers and the consumers should appreciate this action on  
 their part by doing their share towards obtaining the object which  
 will benefit them both.

### The Door Difficulty—Dumping

The recent meetings held by the Ontario Sash & Door Associa-  
 tion, and the letters published in our last issue on the subject of  
 the importations of United States doors into Canada, indicate the  
 seriousness of the situation to Canadian door manufacturers. There  
 is no disputing the fact that doors from the United States are now  
 being sold in Canada, more particularly in Ontario, at a price con-  
 siderably less than cost. While it is admitted that labor can be ob-  
 tained in United States cheaper than in Canada, and that their meth-  
 ods of production are better, the fact remains that, considering the  
 price of lumber alone, without figuring upon the duty, United States  
 doors are put upon the Canadian market at an actual loss to the  
 manufacturer.

What conditions cause the United States manufacturers to sell  
 their doors at a loss is not a matter of vital importance to Cana-  
 dian manufacturers. The chief issue for them is to remedy the ex-  
 isting state of affairs, and how to attain this object is exercising the  
 minds of Canadian door manufacturers, and those interested in the  
 door trade.

While it is an established fact that there is a law against the  
 dumping clause, considerable difficulty is experienced in proving the  
 dumping. It is hard to obtain accurate figures as to the number and  
 value of the doors which are annually exported from the United States  
 to Canada, and an extraordinary fact in this connection is, that it is  
 easier to get information on this subject from the Government De-  
 partments at Washington than it is from our own Departments at  
 Ottawa. There is not much doubt that without definite figures to  
 place before the Dominion Government, little or no relief can be ex-  
 pected from them, and the process of obtaining this information is  
 likely to be a tedious and costly one.

It has been suggested that Canadian door manufacturers should  
 be able to meet the prices at which United States doors are being  
 sold in Canada, and various reasons have been offered to justify this  
 suggestion. It has been stated that Canadian lumbermen are charg-  
 ing the door manufacturers too much for their lumber. This, how-  
 ever, does not appear likely in any way to relieve the situation, as  
 lumber may be said to be worth as much as the lumbermen can  
 obtain for it, and there is no indication at present of anything to  
 cause any material decrease in lumber prices.

Another solution of the difficulty which has been mentioned, is  
 that at present, owing to the lack of recognized lumber grading rules,  
 door manufacturers have to buy a higher grade of lumber than should  
 be necessary to manufacture their doors. While the Canada Lum-  
 berman's views on the question are too well known to need repeti-

tion in this article, yet it does not seem that an agreement as to grading would meet the case.

Some manufacturers have expressed the opinion that the Government should be asked to raise the duty on doors, but this, if it took place at all, would most probably not obtain for a considerable number of years.

The only reasonable course of action therefore, appears to be for the door manufacturers of Canada to co-operate energetically and obtain, no matter the trouble and expense, the necessary particulars of the importation of United States doors, and approach the Government to enforce the law in this respect.

All loyal Canadians must be in sympathy with the door manufacturers, if this cause is just, as it would be a disastrous blow if such an important industry was forced to go out of business as the result of unfair competition.

## Improving Forest Reserve Management

Any steps which may tend to increase the efficiency of Forest Conservation should be eagerly welcomed, not only by lumbermen, but by the people of Canada as a whole, and it is therefore welcome news that great improvements are going to be made in this direction on the Brazeau and Athabaska divisions of the Rocky Mountains Forest Reserve. During the coming winter, "administrative site" surveys are to be made at different points on these reserves and it is proposed to erect ranger and lookout stations which will be no further apart than one day's trip by pack-train, along the primary trail system of the Brazeau Reserve. Three or four log cabins for the rangers will also be constructed. A telephone system is being planned whereby these ranger stations will be connected by telephone to the forest supervisor's office. This office is centrally located and telephone lines will run from it in all directions, much in the manner of the spokes of a wheel with the central office as the hub. This region is one of the richest coal regions in Canada and the future development of these coal fields will be amazing. A number of large mines are already in operation, and, with the completion of the branches of the G. T. P. railway now under construction, will be shipping thousands of tons daily.

With the future development of this country, the timber must be preserved. This region was once forested with very valuable timber, which has largely been destroyed by fires. There is still an abundant supply of mine-prop timber, however, and the whole region is green with young lodge-pole pine from ten to thirty years in age. If preserved from fire this will be an invaluable asset to the country, both for economic uses and as protection to the head-waters of all the rivers which rise in the foothills of the eastern slope.

## Lumberman Aids Anti-Consumption Movement

Mr. John Lumsden, the Ottawa Lumbermen, has offered his hotel at the foot of Lake Temiskaming, worth \$55,000, to the King Edward Memorial hospital for consumptives. Mr. J. M. Godfrey, Toronto, one of the fund trustees, has been authorized by Mr. Lumsden to formally convey the property. The hotel, known as the Bellevue, was formerly run as a summer resort, and is easily reached from Mattawa on the Canadian Pacific Railway or from Haileybury. It is in the midst of wonderful scenery, lake and forest. There are forty rooms for guests, all beautifully furnished, and a large dance hall, which could be made into wards without much expense. It is understood that Mr. Lumsden has in mind an institution for the case of miners who may be stricken with consumption, which is said to be becoming quite prevalent in Cobalt camps.

The figures for the lumbering operations in British Columbia for the month of November show a considerable increase over the figures for the same month last year. The total receipts from royalties and other fees this year amounted to \$48,919, as compared with \$43,687 in November, 1911.

## Layout of Woodworking Plant

**Increasing Demand Requires Highly Developed Capacity—S. Anglin & Company's Plant at Kingston, Ont.**

The planning and laying out of a modern woodworking factory involves far more careful study than might at first glance occur to one who passes through a completed plant in operation. The growth of the woodworking industry in Canada has been so extensive of late years that a modern woodworking plant bears little resemblance to one of the earlier days with the exception perhaps, that the same variety of noise is everywhere prevalent. The modern machinery with its fast feed and great variety of uses is a source of wonder to all who are not acquainted with its great capabilities. It would be an equal source of wonder to one who had been in the woodworking industry in the earlier days and had lost touch with its recent developments.

The great increase in building operations in Canada during the last five years, has led to the multiplication of woodworking factories in all parts of Canada. In Ontario, in particular, the woodworking industry has made wonderful progress. By way of illustrating the progress which has taken place, and in order to give our readers an interesting idea of the manner in which a modern woodworking plant is designed and also to illustrate the way in which machinery is laid out in order to secure the best possible results in the way of reduced cost of operation, we take pleasure in reproducing, on the opposite page, plans of the woodworking factory which is being added to the plant of S. Anglin & Co., Kingston, Ont. In order to keep up with the increased demand this company are erecting a woodworking factory 55 ft. x 106 ft., two storeys high, with high ceilings and an abundance of light, supplied from monitor lights on the roof and large windows in sides and ends.

The woodworking plant is a separate building from the saw and planing mill. It is of mill construction or slow burning type and has two sets of heavy 12 inch x 20 inch concrete beams and 12 in. x 12 in. posts running lengthwise in the centre, to carry the upper floor, all resting on solid concrete foundation. The posts are about 18 ft. apart, leaving plenty of floor space between. The sides of the building are constructed of 2 inch tongue and groove planks, covered with galvanized iron sheathing and the roof is covered with the best quality of asphalt roofing. In the construction of the floors, 2 x 4 in. has been used, laid on edge, with 7/8 in. hardwood flooring on top. This provides a smooth, hard bottom on which the trucks can be easily moved about. It also affords a floor with the additional advantage of being perfectly rigid and not subject to any vibration caused by running machinery.

### How the Machinery is Placed

The ground floor will contain the engine and dynamo and the heavy machines, such as planers, moulders, automatic turning lathe, drum sanders, stair machines, bandsaws, rip-saws, etc. All the heavy articles such as frames, stairs, tanks, columns, etc., will be manufactured on this floor, where they can be handled more easily.

The sash and door machinery will be located in the second storey, which will also house the smaller machines such as glueing apparatus, work benches, etc.

The power for the plant will be furnished by a 60 h.p. Watrous Automatic Steam Engine, connected directly to a Canadian General Electric Dynamo. Live steam is to be supplied from a separate boiler house, the exhaust steam being used for heating the factory, dry kilns, etc. Mill refuse will be used as fuel. The generator will be connected to the city current, so that outside power can be used, if it is ever required.

During the winter evenings the building will be lighted with thirty large 250 watt tungsten lamps, with 18 in. reflectors and several smaller lamps, the electricity being furnished by the dynamo on the premises.

The shafting, hangers, etc., are being supplied by the Fairbanks-Morse Co. of Montreal. An Otis Fensom elevator is also being installed.

### Capacity of the Plant

It is estimated that the woodworking factory will consume 250,000 ft. of lumber annually. This will be entirely in addition to the lumber manufactured by the saw mill and planing mill. When completed, the plant will have cost from \$15,000 to \$20,000. The company intend to manufacture all the different items required in the building line, especially material to architects' details which is not manufactured by other factories. S. Anglin & Co. have recently completed a contract for the interior and exterior woodwork of the new addition to the east block of the Parliament Buildings at Ottawa. During the last twelve years the company have had a wide experience in the manufacture of millwork for colleges, schools, banks, public and private buildings of various kinds. With their new equipment, they will be enabled to develop this end of their business much more extensively than in the past.

# The Forest Conditions of Nova Scotia

Valuable Report Presented by Dr. B. E. Fernow, Showing Forest Resources to the Potential Value of \$300,000,000—Recommendations for Future Management

An excellent report dealing with the "Forest Conditions of Nova Scotia," prepared by Dr. B. E. Fernow, L.L.D., Dean of the Faculty of Forestry of the University of Toronto, with the assistance of Mr. C. D. Howe, Ph.D., and J. H. White, has been published in book form by the Commission of Conservation of Canada. The report is one which reflects the greatest credit upon all who have had to do with its preparation. It was largely through the instrumentality of the Lumbermen's Association of Western Nova Scotia that the Government of Nova Scotia was induced to undertake a forest reconnaissance of the province. The work was carried on during the summers of 1909 and 1910.

The report contains a great deal of information of the utmost value to the lumbering industry in Nova Scotia and affords the first example in Canada of a complete stock-taking of the forest resources of any of the provinces. That the example will be followed by other provinces is greatly to be hoped. We take pleasure in reproducing some of the most important passages from the report. Dealing with the species of trees occurring in Nova Scotia, the report classifies them as follows:—

## Species of Forest Trees Occurring in Nova Scotia

### A. Conifers

White Pine (*Pinus strobus*) is a species universally distributed in mixed stands, the original stand being almost entirely cut, but in certain parts (Shelburne, Queens), it is well represented in second growth.

Red Pine (*Pinus resinosa*) is found only occasionally on gravelly soils, especially of granite origin, and on practically all sandy plains. If, in one place more common than another, it may be said to be in Lunenburg and Queens counties.

Jack Pine (*Pinus divaricata*) is found only in special localities on poorest sites in Colchester county. It is not of commercial value.

Red Spruce (*Picea rubra*) is the principal lumber tree of the province, found everywhere, but especially well-developed in the moister situations.

White Spruce (*Picea canadensis*) is not, as is so often believed and claimed, the principal species. It occurs in the virgin forest only in small numbers, hardly exceeding one per cent. But on pastures and openings, it rapidly takes possession of the ground, and in those conditions grows exceedingly rapidly. It occupies especially the coastal regions, and probably is most abundant in Digby and Yarmouth counties and on the Canso side of Guysborough county. The lumber is inferior to that of the Red Spruce.

Black Spruce (*Picea mariana*) is the principal spruce of the swamps, where it grows, rarely to large size; it is seldom found on uplands and in the lumber forest. In the swampy ground it is naturally a slow grower, and is useful only for mine props and pulpwood.

Balsam Fir (*Abies balsamea*) is confounded with, or called, White Spruce, especially in Cape Breton. It is the most ubiquitous and, numerically, the most frequent conifer. It is found in all parts of the province, but especially in Cape Breton, where, on the plateau, in the northern peninsula, it forms an almost pure continuous forest, with small additions of Red Spruce and White Birch. It is the species which most readily reproduces itself, being very shade-enduring, and grows as rapidly as the White Spruce, or even more so, but it is rather short-lived, and, at present, very generally liable to a disease and early rot. For pulpwood, it is as valuable as spruce.

Hemlock (*Tsuga canadensis*) is more localized in its distribution than the preceding conifers, with the exception of Red and Jack Pine. It is found in fresh soils, especially in the southwestern counties. Its value as a lumber tree is increasing.

Larch (*Larix laricina*), locally called "juniper," is associated with Black Spruce in swamps. The old growth has been destroyed by the sawfly, but the young live growth is to be seen frequently.

### B. Broad-Leaf Trees

Yellow Birch (*Betula lutea*). This valuable lumber tree stands third in abundance among the prevailing hardwoods, being outnumbered by beech and hard maple. In the eastern counties, however, it surpasses both of these in abundance.

Paper or White Birch (*Betula papyrifera*). Frequent through-

Dr. B. E. Fernow

out the province, but it is most abundant in the eastern portion, especially in Guysborough county.

Gray or Wire Birch (*Betula populifolia*). This is not a commercial species, except, as used locally for hoops, but it is one of the most common trees, since it generally takes possession of the burned areas.

Red Oak (*Quercus rubra*). This tree is found in deep soils along streams, especially in the western portion of the province. It is an inferior growth that often occupies rocky or gravelly ridges.

Beech (*Fagus americana*). This is the most common hardwood forest tree in the western counties. It is less common, although frequent, in the eastern counties. It frequently forms pure stands in patches on ridges and tops of hills.

Sugar Maple (*Acer saccharum*) is, next to the beech, the most common hardwood tree in the province.

Red or Soft Maple (*Acer rubrum*) is the common associate of fir in moist soils along the streams. It is also associated with wire birch on semi-barren areas.

American Ash (*Fraxinus americana*) is exceedingly rare.

Black Ash (*Fraxinus nigra*) is frequent in swamps.

In addition to the non-commercial trees, or those not occurring in commercial quantities, the following may be enumerated: (1) Aspen (*Populus tremuloides*); (2) Large-toothed Aspen (*Populus grandidentata*); (3) Balsam Poplar (*Populus balsamifera*); (4) Hop Hornbeam (*Ostrya virginiana*); (5) Blue Beech (*Carpinus caroliniana*); (6) Alder (*Alnus incana*); (7) Elm (*Ulmus americana*); (8) Mountain Ash (*Pyrus americana*); (9) Juneberry (*Amelanchier canadensis*); (10) Thorn (*Crataegus* sp.); (11) Black Cherry (*Prunus serotina*); (12) Choke Cherry (*Prunus virginiana*); (13) Bird Cherry (*Prunus pennsylvanica*); (14) Sumach (*Rhus typhina*); (15) Striped Maple (*Acer pennsylvanicum*); (16) Mountain Maple (*Acer spicatum*); (17) Red Ash (*Fraxinus pennsylvanica*); (18) Dogwood (*Cornus alternifolia*).

## Statistical Results of the Survey

Such difference in forest conditions was found to exist between the mainland and Cape Breton Island, that it was deemed proper to make separate statements for the two parts. The northern portion of the island, with the exception of the shores, is a continuous unsettled forest country on which man has, so far, made no impression, the forest being almost exclusively made up of balsam fir. This species is also the most prominent on the rest of the island.

Dealing with the classification of lands, the report says in part:—

The actual green forest area consisting of some five million acres and stated as occupying 52.5 per cent. of the area of the province, must be increased by the potential 5.8 per cent. of recently burned area and by nearly 12 per cent. of the better class barrens which can eventually be reforested, so that the actual and potential forest area may be set down as representing 70 per cent. of the land area. The balance, only some 10 per cent., is hopeless barren. This is a rather small percentage for waste land, and only conservative treatment of the woodland area, protection against fire, and recuperative measures in the old burns and hopeful barrens, will keep it there.

Less than 100,000 acres of virgin, or semi-virgin timber remain, and, altogether, not over 1,400,000 acres, one-quarter of the green forest area, are furnishing the log supply of the present mills, with a small addition from the 2,800,000 acres of severely culled forest and the 227,000 acres of second growth.

Of the green forest area, pure hardwood forest is represented by less than 7 per cent., and pure coniferous growth by 20 per cent., the bulk of the forest, namely 73 per cent. being of mixed type. With the culling of pine, spruce and hemlock from the latter, there is, of course, the tendency to give ascendancy to hardwood. Hence, the severely culled areas are apt to grow into hardwoods, and probably a considerable area, noted as pure hardwoods, was originally mixed growth from which the conifers have been removed. The two types of virgin and moderately culled hardwoods were combined, the differentiation being practically unnecessary.

A more comprehensive view of conditions as exhibited in figures may be gathered from the accompanying diagram and tables, which

show the areas of these land classifications as percentages of the area of the province as a whole, and by counties.

NOVA SCOTIA FOREST SURVEY, 1909-10  
CLASSIFICATION OF LANDS.—MAINLAND

|                                   | KINGS   |           | ANNAPOLIS |           | DIGBY   |           | YARMOUTH |           | SHELBURNE |           | QUEENS  |           | LUNenburg |           |

Percentage figures in parentheses represent the participation of each forest type in the total forest area.

### Cape Breton

As previously stated, the forest of the island of Cape Breton is of entirely different type from that of the mainland. Here the balsam fir becomes the prominent tree and hence, saw timber is scarce. Much of the woodland is of inferior character. Pulpwood and mine props are its main product.

The northern peninsula, especially, consisting of Inverness and Victoria counties, is an almost unbroken pure balsam fir forest, with only 15 per cent. to 25 per cent. of spruce, except in the black spruce swamps, and about three per cent. of paper birch. This part of the island, which is not subdivided into lots, was not investigated, since a private inspection had been made by the writer a few years ago for commercial purposes, and the information then gained was sufficient for the present purpose. The area distribution here, cannot claim a great degree of accuracy, since the total area involved is open to considerable doubt. The upper portion of the plateau is occupied by a continuous chain of moss barrens or muskegs from which the many

small rivers take their source. The total area of these barrens was estimated as 375 square miles and apportioned in the proportion of 5 to 7 to the two counties of Inverness and Victoria. Similarly, the remaining forest area, with a deduction for other waste land, black spruce swamps, alder brush, etc., estimated at 650 square miles, was so apportioned.

Much of the cleared land in Cape Breton county consists not of farms, but of mine dumps, mine areas, towns, etc.

It will be observed that the total forest area of the island, 1,535,-

CLASSIFICATION OF LAND, NOVA SCOTIA

000 acres, is in somewhat larger proportion to the total area than the mainland, and that the distribution in types also varies considerably.

### Estimating Timber Standing

Having ascertained the areas of timber of different type and their condition, we may, for the sake of arriving at a general statement of the amount of timber available for the axe, assign an average stumpage figure to each type. For this purpose, the cruising of actual properties would furnish a good basis. We have been fortunate in having had an opportunity to inspect estimates covering nearly one million acres in various parts of the province, and of perusing various descriptions, in addition to those based on the personal observations of the survey party. Since these estimates cover almost 15 per cent. of the total forest area, while in detail work by the strip system usually 2 to 5 per cent. are considered sufficient, the basis of the following estimates may be considered ample.

The different parts of the province show, to be sure, a different development of forest growth of the western portion being undoubtedly superior in quality and quantity per acre to that of the eastern part. We have, nevertheless, not attempted to make separate estimates for the different sections, but have chosen an average for each

type in the whole province, excluding, however, Cape Breton island, which stands in a class by itself, the greater part of it being without saw timber.

### Saw Timber

The following figures refer to coniferous timber alone.

While the best acres of mixed growth in which conifers prevail will rarely overrun 15 M feet B.M., and while a single lot of pure conifer growth may furnish as much as 30 M feet, the average of the virgin type over the whole area, may not be figured at over 12 M feet B.M. per acre.

The same differences will appear in the other types. Some of the lightly culled smaller areas may still contain as much as 6 M feet, and the better acres, even on larger areas, may average 4 M, but the general average can not be placed at more than 3 M feet. To this we may add the small area of second growth with the same rate, although this is somewhat too high.

Still more variable are the remnants on severely culled and burned areas, many of which contain no saw timber at all. Yet we may make an allowance of 1,000 feet per acre on the average, which would be liberal.

The barrens and old burns also contain patches of green timber besides pulpwood, and from the cruisings of a considerable acreage of these it would appear that, on the better class of green barrens, an average of as much as 400 feet might be found; the general average, however, could hardly be placed at over 300 feet.

We have then the following calculation, leaving out the pure hardwood areas:

### Estimate of Coniferous Timber on the Mainland

94,496 acres of virgin and semi-virgin . . . at 12 M=1,133,952 M ft.  
1,318,964 acres of moderately culled and second  
growth . . . at 3 M=3,956,892 M ft.  
3,192,175 acres of severely culled and burned at 1 M=3,192,175 M ft.  
1,138,730 acres of green barrens and old burns at 300 ft.= 341,619 M ft.

5,744,365 acres Total . . . . . 8,624,638 M ft.

It is then, tolerably certain that the mainland of the province contains less than ten billion feet of coniferous timber, and the saw timber to be found in Cape Breton would not swell the figure beyond this maximum.

These figures, it is to be understood, are based upon as low a standard of log diameter as possible. Anything that will make a 2 x 4-inch stick is being cut, the market, especially of the western counties shipping to the West Indies and South America, permitting this.

The character of the timber may be judged to some extent by mill tallies. At one of the larger mills such a tally had been kept for three years on a cut of around 5.5 million feet of rather a good class of timber, showing the spruce to run 17.5 logs to the M feet, the pine only slightly better, and the hemlock nearly 11 logs to the M feet. In the 84,000 logs involved, which probably represent the average cut in the region, in numbers, spruce was represented with 62 per cent., hemlock with 25 per cent., and pine with 13 per cent. Owing to the better size of the hemlock, however, the proportions in volume were 53 per cent., 36 per cent. and 11 per cent. respectively. The average spruce log would measure about 11 inches, and the average hemlock log about 14 inches.

If we apply the relative proportion developed by these mill tallies to the timber standing, there would, in round figures, be some five billion feet of spruce, and three billion feet of hemlock, with nearly one billion feet of white pine in existence, but, probably less than this.

### Pulpwood

In addition, a considerable amount of pulpwood swells the value of the forest resource. Here again wide differences exist. Cape Breton leads in quantity per unit, and on the whole. The plateau of Victoria and Inverness counties is a pulpwood or mine prop forest, consisting almost exclusively of balsam fir, with about 15 per cent. spruce and 3 per cent. paper birch; a small amount of saw timber, spruce and white pine being found in the northern portion. Only on the seaward slopes not in farms are hardwoods, sugar maple and yellow birch found.

In this balsam forest the trees run from 6 to 14 inches in diameter, occasionally up to 18 inches, with 36 to 40 feet log length, and ten trees to the cord. The crest being largely occupied by moss barrens in addition to alder swales and black spruce swamps, the productive area of the 1,200 square miles of plateau must be reduced by at least 35 per cent., and may be set down as around 500,000 acres in a solid body. In a private survey undertaken by the writer for commercial purposes some years ago, some 180 sample areas were measured, many running 50 to 60 cords per acre; or, say, 12 million cords in all.

Other parts of the island may add two million cords.

In the western portion of Nova Scotia proper, if conservative lumbering practices were followed, often as much as 15 to 20, and even 30, cords of pulpwood might be recovered in addition to the saw

timber, but, under present methods of lumbering, most of this is lost. The eastern portion contains much smaller timber and, hence, more pulpwood. The data for a close estimate are not at hand, but, if we might be allowed to guess, we would place the available pulpwood contents of the mainland at less than two cords per acre or ten million cords.

Of hardwoods, no estimate was attempted. The pure hardwood area comprises only 330,866 acres. The timber, generally, is of mediocre development. An allowance of six million cords for this portion would be ample. In Cape Breton, however, an additional two million cords of birch spoolwood might be found. In addition, the hardwood of the mixed type which runs frequently to fifty per cent. of the composition, would furnish considerable quantities—perhaps as much as twenty-five million cords—if it were not destroyed in the logging operations.

### Consumption

No attempt has been made to secure new data as to cut, as this is a matter, not of fieldwork, but of statistical inquiry for which this

†Owing to the fact that the cooperage returns for Nova Scotia for 1910 were very incomplete, those for 1911, which are comparatively complete, are given instead.

survey was not equipped. However, by combining census data for 1900 and 1906 with published and unpublished data for 1910, kindly placed at my disposal by the Dominion Forestry Branch, we are enabled to secure a very complete basis for estimating the wood consumption of the province.

From the tabulations of the Forestry Branch of the Department of the Interior we find that the annual cut for lumber is about three

hundred million feet B.M., which, in 1900, was valued in the log at less than two million dollars, but, in 1910, was valued as lumber, lath and shingles (240 mills reporting) at nearly three and one-half million dollars. In this cut, spruce participates to the extent of 62 per cent. and hemlock, 20 per cent. Pine represents still about 10 per cent. of the cut; hardwoods furnished only 4.5 per cent., worth \$158,706.

At least 80 per cent. of the cut was shipped out of the country, one-half by water.

Minor products, like railway ties, telegraph poles, cooperage stock, etc., and firewood, added, in the Census year, about one and one-half million dollars to the value of the annual forest product.

Wood using industries:

(a) Furniture and car industries used 17,306,000 feet, costing \$323,497. About 20 per cent. of this was grown in the province; 57 per cent. yellow pine; 13.7 per cent. oak (imported); 5.2 per cent. douglas fir.

(b) Agricultural implement and vehicle industries—small—only 394,000 feet used, costing \$10,640; practically all home-grown.

Pulpwood: In 1910, 29,606 cords costing \$135,965, were manufactured into pulp in the province.

Altogether, we are justified, from these figures, in estimating the total value directly to be credited to the forest resources as on the average, an even \$5,000,000 per year. The present cut for home consumption and export, estimated at not less than 400 million feet, when set against our estimate of eight to ten billion feet standing, indicates 20 to 25 years' supply for such a cut, if what young growth may contribute towards lengthening the supply is left out of consideration.

Practically, however, the life of the milling industry at its present rate of consumption will be limited by the timber standing on the moderately culled and virgin areas, with some of the second growth. These amounts have been estimated at little more than five billion feet, and hence this estimate halves the life of this resource as stated above, accentuating the importance of the immediate adoption of conservative use and recuperative measures.

#### Estimating Growth

There is nothing so difficult as to determine with any approach to accuracy the amount of product which may be secured from a growing timber crop. The rate of growth on the same acre with the same species varies from period to period and, therefore, the average rate varies with the length of time the timber is allowed to grow. Again, when a large variety of conditions is involved the attempt to arrive at an average figure can be hardly more than a guess. In the virgin, or nearly virgin, forest, growth, so far as quantity per acre is concerned, has practically stopped, although, of course, trees still add to their diameter, and, if rot does not progress too rapidly, their value increment may even be rising. The conservatively culled forest will show in the old stock a greater diameter and value increment, if not too severely culled, than the virgin forest. With the increased severity of culling the growth is transferred from the old stock to the young growth, if any, and the more severe the culling, the better the rate of growth, provided always that young growth, a seedling growth, is established. It may, therefore, be that under certain circumstances, that is, when a satisfactory young growth is on the ground, severe culling may be the much better procedure to secure a satisfactory rate of growth.

Most extravagant ideas exist as to the rate of growth of trees, observations of single trees growing in the open being taken as a basis to be translated into performance by whole acres of trees. The idea prevails that Nova Scotia spruce in the Nova Scotia climate is growing at an extraordinary rate. As a matter of fact, while it can be stated that the climate is most favorable to reproduction, i.e., to the establishment of young growth, the rate of growth of trees in the forest is not very different from the ordinary rate to be found in the New England States under similar conditions.

No time was allowed to make any detail studies; there were, however, incidentally, some 550 trees analyzed as to their rate of diameter growth, and a number of sample plats were measured to arrive at a conception of growth conditions. From these measurements it appears that to produce a spruce tree, 12 inches in diameter on the stump, may require from fifty years for the most favored trees, to one hundred and seventy years for trees which had for a long time to compete for light with their neighbors. The unusually rapid-growth trees are, to be sure, found only occasionally; the much more usual rapid growers require eighty to ninety years to make the 12-inch diameter. In other words, 1 inch of diameter is formed in the best average case in six to seven years; in the poorer conditions, in fourteen years. Older, stouter trees that have averaged twenty years in making one inch of diameter are not infrequent, and twelve years may, as in Sweden, be considered the average performance in the natural woods. That is to say, it took a hundred and forty to a hun-

dred and fifty years, on the average, to grow the trees that are now being lumbered.

A series of measurements were made on second growth trees, which are in more favorable light conditions, and, hence, make better growth. Some 250 trees of this description in various regions were analyzed. Here, as is to be expected, a very much better rate prevails owing to, and in proportion to, the light admitted. Fifty trees on an old pasture south of Springhill in Cumberland county, ranging from thirty-five to fifty-nine years, had averaged one inch in five years, i.e., a tree of 12-inch diameter on the stump was grown in sixty years. The same rate was found in old pastures in other localities. But in the forest, twenty trees in Colchester county, ranging in age from thirty-five to forty-eight years grew at the rate of 1 inch in seven years, making the 12-inch tree in eighty-five years. This may be assumed as a fair average rate for second growth trees.

These statements refer to red spruce, which is the species most prominent in Nova Scotia forests. The white spruce, which forms rarely, as much as 10 per cent. and usually not much more than 1 per cent. of the natural forest growth, is the species which occupies readily the abandoned pastures near the coast, and there, in the full enjoyment of light, grows as rapidly, or perhaps more rapidly, but into a poorer tree—a "ladder" tree, as, on account of the branches, a lumberman has called them. A few trees of this species that were measured, showed that they had developed at the rate of 1 inch in four years. Balsam fir, which in some parts is erroneously called white spruce, shows about the same rate of growth. One inch in five to six years seems the rate for young second growth of this species on pastures.

White pine is the fastest grower; yet, a group of 25 trees ranging from 63 to 84 years and averaging 68 years of age, evidently sec-

ond growth, averaged only 11.4 inches in diameter. They had grown at the rate of 1 inch in six and two-thirds years.

Some 26 trees of hemlock in the forest, and old stand on a first-class site near a stream, ranging from one hundred and seventy to two hundred and sixty-nine years, averaged two hundred and ten years, with an average diameter of 20 inches, made, therefore, 1 inch in ten years—a very good performance for this species.

The above tables will make clear the great variation in rate of growth that is found under varying conditions and, sometimes, under apparently the same conditions. It should be stated for those who desire to ascertain for themselves this relation between time and dimension, that, to the rings counted upon the stump, the time it took to make the height of the stump must be added. This, according to the height of the stump, usually varies from five to ten years.

When it comes to the question of production of volume per acre and year which the Nova Scotia forest area may furnish, there are no data available to make even approximate estimates. Conditions are so variable that no experience figures will apply. All we can do is to discuss possibilities. If we were to assume a hundred and fifty years as the average age of the log trees in the virgin forest—which seems not far from the truth—and divide this age into the stand as we find it, we would have on the best acres cutting 30 M feet, an annual increment of 200 feet, and, if our average of 12 M feet is approximately correct, the rate on the average would be 80 feet, B.M., per acre. This would seem to indicate the possibilities for large areas of virgin forest.

We may also gain some insight by comparison with the experience of countries where thousands of measurements and actual knowledge is scientifically managed forests exists. Of the larger forest administrations of Germany, Prussian State forests furnish the smallest per acre product, and, hence, are best used for comparison with our unregulated conditions. The reason for this lower product is the extent of the area involved, nearly seven million acres, which includes much poor land, and the lack of development of means of transportation in the eastern provinces, which makes close utilization unprofitable; to this may be added the northern climate which makes the rate of growth very similar to that of Nova Scotia. Here, the annual cut of sizeable material, including logs, mine props, posts, poles and the better class of fuelwood, is less than 30 cubic feet per acre. To translate this forest-grown round material into board feet, we may multiply it by 5 at most, that is to say, the annual average growth is at best 150 feet, B.M., per acre. That the best acres may produce as much as four and five times that amount does not change this highest average.

If, then, the whole green forest area of Nova Scotia of, say, six million acres were managed like the Prussian government forests, an annual cut of more than twice the present one could be had forever. As conditions are now, we venture to estimate that not one-quarter the growth of useful character takes place, that is to say, we would doubt that the growth over the area of burned, severely culled, and moderately culled area amounts to 40 feet B.M. per acre. If merely fires are kept out and the re-seeding of the valuable species were not prevented by too close culling, such production could be readily attained. Even so, if this amount were produced, at least half the present cut would be secured from new growth. More careful investigations in this direction are called for.

Incidentally, it may be of interest that, taking the total forest area of Germany of thirty-five million acres, the annual growth, represented presumably in the annual cut of 1,337,000,000 cubic feet of wood of 3-inch diameter and more, appears to be one and one-third per cent. of the growing stock—nothing like the extravagant ideas of growth in the virgin forest that have been almost universally accepted in this country.

#### Ownership Conditions

We may briefly refer to ownership conditions as being influential in attempts to secure a conservative use of the forest resources.

Unlike other provinces, the Government of Nova Scotia early adopted the policy of disposing of timber and land at a price per acre, the object being to encourage settlement of the country, no matter whether farm or forest land was taken. Not until 1900, was this policy changed to one of leasing lands for the removal of timber under leases running for twenty years, subject to renewal, at not less than 40 cents an acre for the term. The price, later, was changed to 80 cents, the lessee being entitled to take all timber of not less than 10 inches in diameter. But the government is also empowered to lease on other terms when land of inferior quality is involved and manufactures are to be established.

The law of 1900 authorizes the re-purchase, at not less than 25 cents an acre, of lands granted in fee simple. Unfortunately the Government did not take advantage of this authority, and the Act was repealed in 1910. Under the policy of sale, all the land but about 1.5 million acres was disposed of, largely in small parcels, with a few grants of larger extent. A large number of grants were issued to

soldiers, the majority of which probably were never occupied by them. After the best timber had been thus disposed of extensive grants were made to railway and mining companies—notably the Nova Scotia Railway Company—which often were no better in character than the lands still held by the Crown.

Some large operators and corporations have acquired and combined number of smaller grants and, at present, probably little less than half the timbered area is owned in large holdings of 10,000 to 250,000 acres in extent, the other, and larger, half being owned in holdings which rarely exceed 1,000 acres.

Small portable and water mills are a quite frequent feature.

It appears that, contrary to the usual experience, the small ownership is the more conservative one. The large operators, being forced to cut large quantities, do not have the same chance of lumbering conservatively, which the small owner has who personally superintends his cut. At any rate, it is worth noting that many of the small owners treat their woodlots with care, cutting to a diameter limit in selection, and even "downing" the brush.

The character of the Crown lands, as stated before, places them largely in the class of barrens and semi-barrens. Yet, there is enough of present and prospective value in them to call for closer investigation and conservative management, and the government undoubtedly is under prime obligation to consider such management.

#### Recommendations

Finding that 80 per cent. of the province—when not barren—is forest country and practically destined to remain so, it would appear rational for government and people to put forth every effort to keep the same in productive condition. Here is a natural resource capable, under proper management, of forever producing, by annual increment, as interest, at least twice as much as is now being cut from capital stock; a resource which, basing its value on reasonable rates of growth, both of wood and of wood values, may reasonably be stated as representing a potential capital of at least \$300,000,000. It is now largely in poor condition, and is being annually, further deteriorated by abuse and injudicious use, because those owning it are mostly not concerned in its future, or do not realize its potentialities. To arrest further deterioration and to begin restoration is the present duty of those who have the continued prosperity of the province at heart.

The first, most needful step towards a change from past neglect has already been taken in the enactment of legislation to protect the forest properties against fire, and in inaugurating the beginning of a suitable organization for carrying out its provisions in co-operation between the government and the timberland owners. This organization should be extended and perfected until the fire danger to forest property has become as remote as to city property. This is practically possible in Nova Scotia, where the populational conditions are most favorable, inasmuch as the country is almost everywhere settled and accessible, and owners of woodlots or small timber tracts are distributed throughout the country. Fire watchers and fire fighters are, therefore, nearly everywhere available on short notice. There is no reason why in a few years of earnest and determined effort, by an educational campaign and by efficient protective service, the destruction of forest by fire should not be reduced to a rare accident. Only when this is accomplished, will it be reasonable to resort to methods of recuperation.

To further reduce the chance of destructive fires, the propriety of lopping tops in logging operations, if not burning the same, as a reasonable protective measure, should be seriously considered.

As to details of practicable measures in this direction and otherwise, I may refer to a report by the Committee on Forest Fire Legislation of the Canadian Forestry Association, lately issued.

I would recommend its study especially with regard to the provisions for making land along railways safe and the railways liable for the fires they set out, and also as regards suggestions with respect to the erection of watch towers, the issue of permits for setting fires in the woods, the lopping of tops, the burning of brush, and the proper organization of a fire fighting force.

Next to protection against fires, improvement in logging methods with proper regard to young growth should be secured. The aim of the logger, at least, should be not to prevent the efforts of Nature to restore the cut-over lands to useful production. This is a matter of complex nature, for which no general prescription can be given, each case requiring special diagnosis locally, and special expert advice; and it is also a matter of education to secure the application of the advice. As an expression of its educational function, the government should establish a technically educated Provincial Forester, whose business it should be to study the situation in the various localities and act as public adviser or instructor—a wandering teacher.

In this respect the recent institution of Conservation Boards in Sweden is most suggestive. In that country, for every province or county, a local Board of three members is established to promote forest conservation. The Board consists of one member appointed by the government, one elected by the county council, and one elected

by the County Agricultural Society; and additional members may be elected directly by the people. This Board chooses a technical adviser from the State Forest Service whose salary is paid by the government, which also raises the funds for the use of the Board by the imposition of a small duty on wood exports.

It is left entirely to the discretion of the Board how these funds are to be applied in executing the law for furthering the forestry interests, with the mere injunction that a conservative treatment of the woods must be enforced, and that regeneration or reforestation must be attended to. The Board, working under the County Council, has the power, however, to enforce its rulings in the courts by injunctions, money fines, confiscation of logs, etc.

Naturally, at first, different Boards construed the law differently, and applied the funds in different ways, which was undoubtedly intended by the law, in order to give scope according to varying conditions. There are, however, three directions in which eventually all have to come to work, namely, education, assistance, and police regulations.

In one of the provinces, the forestry expert gives three separate technical courses of instruction to woodland owners, each lasting about two weeks, namely two in the autumn on silviculture and on mensuration, and one in the spring on draining—the utilization of the many peat bogs being an important problem; and this problem is also an important one in Nova Scotia. Two lectures a day and six to eight hours demonstration in the field is the time given to these courses in which some four or five forest rangers assist at the demonstrations. The Board pays the living expenses of those attending. The number admitted annually, out of the 80 to 90 applications is 50; in five years, some 200 or more men attended these courses. In addition, literature of a popularly written but technical character is distributed. Sometimes this instruction is given in combination with high schools or county schools.

To those who ask for special advice in the management of their properties it is given by sending an expert on the ground. To those who desire to plant waste lands or old clearings, seed is furnished up to 50 lbs., at one-tenth of its cost, and other plant material may, under certain circumstances, be supplied free of charge.

The owner has a right to cut as he pleases, but, if natural regeneration fails to appear he is obliged to plant, the Board determining when the necessity for such planting has arrived. If the owner objects to the decision of the Board, a special inspection is ordered, the expense of which he must pay, and at the same time he loses all claim to assistance. Although the power of the Board is great, the policy is to secure co-operation rather than to use force. By this time, owners have learned the advantages of these arrangements, and only speculators make trouble. I have described this institution at length, because it is thoroughly democratic and is, with minor changes, immediately applicable to Nova Scotia.

For Nova Scotia, the appointment of at least one expert to attend to this educational campaign in co-operation with existing or specially constituted local authorities would be a step in the right direction. The appointment of a Provincial Forester—as has been proved in the several States of the Union, where they have such officials—would immediately result in an awakened interest in the possibilities of improved methods of forest use, and from what we have seen and heard during the progress of this survey, the woodland owners will be found ready to follow his advice.

With such a Provincial Forester, the government would also be enabled to find out what is the best policy to pursue with regard to the remaining Crown lands. Their extent, exact location and condition should, of course, first be ascertained, and in their management, considerations of their future, rather than their present, value should dictate the policy. If the government cannot manage its property conservatively, who will?

Lastly, perhaps in conjunction with the Agricultural College and Experiment Station at Truro, the Provincial Forester should conduct an investigation into the question of the use and restoration of the barrens, and should make experiments in improving natural meadows and savannas, and in forest planting on areas fit for such planting.

We hope to have shown by this survey that the forest resources of Nova Scotia are an important factor of the industrial economy of the province, that they are liable to exhaustion in the not distant future, that they are capable of being perpetuated by more conservative use, and that it is high time to provide for such perpetuation.

In conclusion, I may be allowed to say that in no portion of this continent, and of the Dominion in particular, are the chances for the immediate inauguration of a definite practical forest policy so favorable as in Nova Scotia, and this is so because of the presence of an intelligent, well-distributed population.

#### National Hardwood Inspection for November

The National Hardwood Lumber Association in their report for the month of November 1912, show that their Inspection Bureau inspected 17,180,640 ft. of lumber under bonded certificate. They re-

port also that the car shortage seriously affected their work in many quarters, but that, notwithstanding this fact, the figures for 1911 show an increase of 4,510,243 ft. over November 1911. Mr. J. J. Miller, the inspector for the association at Toronto, is well up in the list of totals, with 247,011.

#### Map of U. S. Timber Production

The United States Department of Agriculture, Forest Service, have issued a colored diagrammatic map of the United States which shows the production of lumber for 1910 by States and species graphically. The statistics of the lumber cut are, therefore, made available at a glance. One square inch represents approximately one billion feet of lumber. The figures on which this work is based are those collected and presented by the Bureau of the Census in cooperation with this office of the Forest Service. The map will be of much value to all in the lumber manufacturing and selling business.

#### Hardwood Manufacturers Association Reports

The Hardwood Manufacturers' Association of the United States have just completed the market analysis for the month of November, and the report is now in the hands of its membership. The Association is developing this market condition report to a state of high efficiency through the use of the facilities that it possesses to secure confidential information from its membership. This market publication is intended as a guide to the member, whether he is a producer, wholesaler or consumer, by furnishing a comprehensive and at the same time an accurate analysis of market conditions of recent sales for the various hardwoods.

In compiling this report, the membership of the Hardwood Association is divided into seven classes, according to the woods they handle, as follows: Class 1, oak, oak construction and car material; Class 2, poplar planing mill operator; Class 3, poplar, chestnut, basswood and buckeye; Class 4, gum, and cottonwood, rough and dressed; Class 5, ash, cherry, walnut, hickory, butternut, beech, birch, maple, elm and sycamore; Class 6, chair, furniture and vehicle dimension. Class 7, mahogany. On the first of each month report blanks are mailed to the members. Each class has a separate report sheet. The member inserts the prices he has been receiving during the preceding month for the various grades of hardwoods enumerated, together with such comments as may come to his mind. This information is compiled by the Association office. All the reports on one grade of wood are assembled, and as there are about 300 on most of them, this gives a comprehensive idea of the market for that particular wood. The highest and lowest prices are used for the range of the market, as well as the average price determined. All the prices submitted are studied for the analysis of the market, which is reached by taking into consideration the volume of business and other general conditions surrounding the market.

The reports also take into consideration demand, car supply, thicknesses, etc., with the result that they are a useful feature in the hands of the mill men in the back woods, whose only outlook over the market for his product is his selling correspondence and perhaps the daily newspapers, as well as such stray information as may drift his way occasionally.

The annual convention of the Hardwood Manufacturers' Association of the United States will be held in Cincinnati, February 4th and 5th, 1913. This will be the eleventh annual meeting. About 700 timber owners, mill operators, wholesalers and consumers will be in attendance. One of the features will be the "trading on the floor," in which, in past conventions, millions of feet of lumber has been bought and sold. A number of subjects of vital importance will be discussed by the convention.

#### The Course of Wholesale Prices in Canada

The Department of Labor's index number of wholesale prices in Canada rose approximately one point in November, standing at 134.3 as compared with 133.1 in October and 129.4 in November 1911. The advance was due chiefly to higher prices for fish, textiles, hides and leathers, fuel and lighting, while Ontario grains, dairy products, metals, lumber and miscellaneous building materials were slightly upward, with western grains, cattle and beef, paints and oils, downward. As compared with the same month last year, grains and fodders, fruits and vegetables, were lower, while animals and meats, dairy products, fish, textiles, hides, leathers, boots and shoes, metals, fuel, house furnishings, and miscellaneous commodities were higher than in 1911. In retail prices, coal, wood, butter and eggs were upward; potatoes also were higher in Ontario, while there was a downward movement in flour, sugar, prunes and evaporated apples.

Mr. A. L. Dawe, Canadian Manager for Edward Lloyd, Limited, of London, England, has sailed on the "Mauretania" for England. Mr. Dawe will return to Montreal in the latter part of January.

ON SUBJECTS OF  
CURRENT INTEREST

## Canadian Door Grades Need Altering

Ottawa, December 20, 1912.

Editor Canada Lumberman:

We have gone thoroughly into the matter of the importation of United States doors into Canada, and find that they are coming into Canada in large quantities.

We found this to be true, through personal inquiries which we have been making with firms who are buying these doors, and who do not manufacture, and also firms who are making Canadian pine doors, and in both cases they were bringing many carloads of doors into Canada. These doors, we may say, are coming in at Toronto, Montreal, Ottawa, Windsor and Sault Ste. Marie, and many other places. In Montreal, one firm alone handled ten carloads and in our own city we know of seven carloads that two firms handled. We do not know to what amount these doors were handled in other cities, but know that it run up in the thousands.

A few of the chief reasons why we think that these United States doors should not come into Canada are, first, we all know, and there is no getting away from the fact, that the grade of the United States door is of better quality than our No. 2 door, which competes against it. The door they are sending in is sold at our No. 2 price, and we feel that this clear door is boosting the grades upward, instead of lowering them. Manufacturers of pine doors to-day must realize that the price of door stock and labor has advanced from 25 per cent. to 40 per cent., and it is difficult, even with the best methods and latest machinery, to make a No. 2 door profitably. This is one of the many reasons why our brother manufacturers are bringing in these doors instead of making them.

We could cite you many instances but know that you have already gone well into the facts. The feeling that we believe prevails among most door manufacturers to-day, is that there would be more money in buying United States doors and discontinuing making doors at the present prices. On the other hand we have the factory built and installed with good machinery and have the forlorn hope that prices will be better, and that the association will see its way clear to change the grades a little to enable one to make pine doors at a fair profit, which we venture to say very few in Canada are doing just now.

However, we can only voice the sentiment, along with our brother manufacturer, that something must be done and that quickly, and we will heartily support any move that will help to remedy the trouble of importation of United States doors into Canada.

In conclusion we suggest that the committee appointed at the last meeting of the Ontario Sash and Door Association in Toronto, be sent to Ottawa to interview the Minister of Customs personally, and see if something cannot be done to raise the duty on these doors coming to Canada, and also on rough lumber. We think that this method would have the desired effect, viz., stopping the United States door coming into Canada.

Yours very truly,  
ESTATE JAMES DAVIDSON,  
G. P. Davidson, Manager.

## Doors Being Dumped into Canada

Collingwood, Dec. 20, 1912.

Editor Canada Lumberman:

While we manufacture a considerable number of doors we do not call ourselves "door manufacturers" as we make a specialty of supplying material such as doors, stair-work and interior finish to architect's details, and are running on special orders all the time. We do very little, if any, stock work, so that we really are not much interested in the importation of stock doors.

Of course, there are a lot of veneered and special doors imported from the United States with which we come into competition to a certain extent, but as the material we turn out is made especially for the building for which it belongs, the importation of the above doors does not affect us in the same way as it would a manufacturer who is making stock doors, the same as the most of those which are imported into Canada from the United States. While we, as manufacturers, would like to see the importation of these doors from the United States stopped, we do not see how it is to be prevented so long as they can turn them out cheap enough to ship them here and pay duty and compete with the same class of material which is manufactured in Canada, and they are certainly able to do this, as the factories over there are in such a big way that they are able to specialize in certain lines of goods on account of having such a large trade to

cater to. Of course, if we could prove that these doors are being dumped into Canada, and sold here at a lower price than they are sold for to United States customers we could get after them. We have no doubt that there is a lot of this being done. As we say above, these large factories specialize in certain lines, and therefore are enabled to reduce the cost to a minimum, but to do this they must keep their factories running to their full capacity. Then, if they get overstocked and cannot sell their output over there at association prices they are very liable to dump it here, and get what they can for it. As we say above, we think there is a lot of this being done, but of course it has to be proven before we can get after them. This, of course, is a matter for the Sash & Door Association to take up. We at present, are not members of the above association, as we do not call ourselves sash and door manufacturers, but if there is anything we could do to prevent the dumping of this material into Canada we would be only too pleased to lend any assistance which we possibly can.

Yours very truly,  
THE BRYAN MANUFACTURING CO., LTD.,  
F. W. Bryan.

## Car Shortage Killing Trade

Chaleurs, P.Q., Dec. 20, 1912

Editor Canada Lumberman:

We will not take up your time and space to express our opinions as to the causes and avoidability of the car-shortage this fall. As to its effects, however, we can say that it has nearly put us out of business for the past three months. We are located on the Quebec-Oriental Railway which joins the Intercolonial at Mata-pedia, seventy miles west of here. From information we have, we judge that conditions here are considerably worse than they are on the main line of the Intercolonial. We are sorry to say we see no improvement as yet. We have not received an empty car for a week, although we have an order in for twenty, all of which are for orders that have been on our books nearly three months. Since we began to feel the scarcity of cars, we have not booked any more business, although there is plenty offering, for the reason that we judged we would hardly be able to ship the orders already booked before the snow got deep enough to cut off our shipping for the winter. During the period since October 1st, we have received twenty-four cars. Eight of these were flat cars which we loaded against our inclination, rather than lose the business for want of empty box cars.

During this period we could easily have booked and loaded two cars per day if the empty box cars had been procurable.

You are at liberty to print this letter over our signature, if you wish. We wish you success in your effort to better conditions.

Yours very truly,  
CASCAPEDIA MANUFACTURING & TRADING CO.

## An Intolerable Situation

St. Pacome, P.Q., Dec. 21, 1912

Editor Canada Lumberman:

The car situation on this road for the past two years has been most trying. In that time we have always been far behind in our orders, in fact, at times we have had orders in our books for as many as three hundred cars of lumber and more of pulpwood without having a car in sight.

During the past summer we have not been as badly off as we were fortunate enough to arrange with our consignee to take their shipments by boat from Levis, Que. We arranged with the road to supply a number of flats, which were shuttled between here and Levis, we loading the same cars over and over again. Naturally, this relieved the situation, but put us to the extra expense of staking without however getting any cheaper rate. Since the close of navigation, we have not been getting all the cars necessary, and in consequence are falling behind again in our shipments.

We do not at all blame the officials of the road who are doing their best with what equipment they have, a large percentage of which is antiquated and should be on the scrap heap.

It is quite evident that the Intercolonial is lamentably deficient in freight equipment, and if you can bring any pressure to bear on the Department of Railways to relieve the situation you will be benefitting this section of the country greatly. The existing conditions are certainly a hindrance to commerce in general.

Yours very truly,  
W. GERARD POWER.

**Intercolonial Car Shortage Troubles**

Campbellton, N.B., Dec. 14, 1912.

Editor Canada Lumberman:—

Regarding car shortage, the position here some weeks ago was the worst that we have ever seen, and for days it was not possible for us to get any cars whatever, and to one buyer, who was pressing us very hard for shipment of his purchase from us, we had to write that at the ratio the railway were furnishing us with cars, we would not be able to reach his order, taking it in the order in which we had it on our books, until sometime in 1917.

However, the position has improved very much during the last couple of weeks, and we are now getting more generous treatment; the cars, we understand, coming from an enormous export business now being moved from the west to the liners at St. John and Halifax, and as there is not sufficient imports to load the cars there, they are coming back light, and we are all able to get quite a number of them.

Yours truly, SHIVES LUMBER CO., LTD.

**Business Dragging for Want of Cars**

Editor Canada Lumberman:—

We have been very much hampered for want of cars during the summer months; but of late, the situation is somewhat better. We have been thinking of changing the machinery in our mill to cut our lumber to suit the United States market—we have always been in the habit of cutting for the English market for water shipment, but by cutting for the United States market we can cut part of our stock to better advantage. The last two years, however, we felt it was no use thinking of making any sales in that direction, on account of not being able to get cars to ship the stuff. Of course, when customers want their lumber, they want it in the spring and summer, when they need it—they do not want it in the fall or winter. So, we have just been dealing in the same old way, although it is not the most profitable.

We always live in hope that it will be better; but this is the record of the last two years, and we are still leaving our mill as it is this year, as we are afraid to venture into car shipment.

Yours truly,  
NEW BRUNSWICK MANUFACTURER.**Losing Business for Want of Cars**

Sayabec, Que., Dec. 15, 1912.

Editor Canada Lumberman:—

We have suffered terribly for want of cars during the last year particularly, but also at periods for several years. We have had to shut down our plant on account of inadequate car supply. We completely closed for a week at one time during early November and are far behind in both our orders and bank account now, as a result. Our men lost the labor and our merchants felt the loss. We feel that the government ought to purchase a large number of locomotives (as they are short of power) and box cars. It is a sure thing that they can't do a larger volume of business on the same equipment and the business is here to be done.

Yours truly,  
JOHN FENDERSON & COMPANY, INC.**Intercolonial Car Supply Again Short**

Editor Canada Lumberman:—

We fully realize the difficulty of the management of the I. C. R. from the fact that all the car works of Canada to-day are busy turning out cars as fast as they can. A slight relief might be obtained if the railway management would do more repairing of cars themselves and using them for purely local traffic instead of having the yards at large centres filled up with cars unfit for service.

Yours very truly,  
MARITIME MANUFACTURER.**Too Many Unrepaired Cars**

Bathurst Village, N.B., Dec. 12, 1912.

Editor Canada Lumberman:—

We are sorry to have to report to you again that the car situation is getting bad on this road. We had, for a few days, sufficient cars to keep us going, but the supply is going back again and we are now getting about half what we require, and after talking with the railway officials, I am afraid that the outlook is really bad for a supply in the future. We think it might be a good thing for you to call the attention of the authorities of the I. C. R. to this matter through the columns of your journal and perhaps it may do some good.

Yours truly, BATHURST LUMBER CO., LTD.,  
Angus McLean.

Mr. W. K. Grafftey, of the Montreal Lumber Company, will present himself for re-election as an alderman. He is a nominee of the Citizens' Association.

**Montreal Lumbermen's President****Arthur H. Campbell Elected at Annual Meeting of Board of Trade Lumber Association**

A. H. Campbell, Montreal

Mr. Arthur H. Campbell, of the Campbell-MacLaurin Lumber Company, has been elected president of the Montreal Lumber Association (in connection with the Board of Trade) for the ensuing year. The other officers are: Vice-president, Mr. W. K. Grafftey; treasurer, Mr. F. W. Cotter; directors, Messrs. Geo. Esplin, W. A. Filion, T. J. Ruth-erford and W. Blair. The newly-elected president, Mr. Arthur H. Campbell, has been chosen as the association's nominee for election to the Council of the Board of Trade.

The retiring president, Mr. W. K. Grafftey, in his annual report, stated that the principal matters considered by the association during the past year were transportation problems. Mr. Grafftey then referred to the proposal of the railways to change the stop-off arrangements on lumber for dressing, resawing, sorting and reshipment, and stated that a satisfactory arrangement was concluded by the representatives of the association and the companies. The old question of allowances for track scale weights was still under discussion with the railway companies, and would probably be the subject of a further hearing by the Railway Commissioners in January.

Referring to the application for increased demurrage, the President expressed regret that the Railway Commissioners had granted an increase from \$1 per day to \$2 and \$3. All the organizations of shippers were unanimous in putting the responsibility for the lack of cars and the poor service generally, on the railway companies, and practically all were unanimous in favoring the principle of reciprocal demurrage if any advance in the rates was seriously considered.

The fact that for years Montreal has not received its full credit in the matter of the value of building permits issued, the published figures for the city being generally understood to be very considerably below the actual value of the buildings erected, led the association to ask the Council of the Board of Trade to urge upon the civic authorities the importance of changing the system of issuing or recording building permits so as to ensure the official figures representing actual values more nearly than is now the case. This request, the Council complied with by a letter to the Board of Commissioners on November 19th, and it is hoped that the change will be made.

**Death of Francis W. Bagan**

Francis W. Bagan, Secretary-Treasurer of the Vigars-Shear Lumber Company, Port Arthur, Ont., died on Tuesday morning, December 10th, after a three weeks' illness of typhoid fever. The late Mr. Bagan was born at Menomonie, Wis., December 17th, 1880, and received his education in the local schools at that place. For a time he was with the Knapp Stout Company at Menomonie, where he gained his first experience in lumber, afterwards being associated with a local mercantile company for a short period. He moved to Port Arthur, Ont., in the spring of 1905, to accept a position with the Vigars-Shear Lumber Company, Limited. In 1906 he became Secretary-Treasurer of this company and, a short time later, a Director and large stock holder. Mr. Bagan was a man of rare intellect and a true friend of all who knew him. At the time of his death he had attained prominence in many ways and was one of the leading business men of Port Arthur. He is survived by his father and mother, residing at Menomonie, Wis., three brothers and a sister.

The Laurentide Company, Ltd., Grand'Mere, P.Q., have sold practically all their 1913 output. A new digester is now being put in. The company are constructing a power house and plant for the purpose of developing an additional 50,000 horse power, making a total of 70,000 horse power. The greater part of this additional power will be sold.

A quarterly dividend of 1¼ per cent. has been declared on the preferred shares of the Riordon Pulp & Paper Company.

# Do Shantymen Receive Ill Treatment?

The Old Problems of Food, Pay and Medical Attention Brought Up  
In a Sensational Newspaper Article—The Situation in Its True Light

Special Contributed by a Backwoodsman

From time to time one reads in the press accusations that those who have charge of the lumber shanties are wont to treat the men in their employ in an extremely harsh manner, and enforce them to submit to conditions which are little short of slavery. That there are here and there cases of men, by reason of the isolation which their calling entails, being compelled to endure hardships, and even indignities, which they would not tolerate for an hour if they were within easier access of the law, may be perfectly true, but to suggest that as a general rule the men of the shanties are treated more like dogs than human beings is very wide of the mark. In a well-regulated shanty, managed by a responsible lumber firm, the lumber-jacks will be as contented a body of men as can be found anywhere. In any camp there are generally one or two "grouchers;" and when a lumber-jack is disgruntled he can make more noise, and discover more grievances, fancied or real, than a man in any other calling. His food is bad, his axe is no good and never has been, his fellow-workers are objectionable to him—in short there is no end to the list of his woes when he once gets "a bee in his bonnet." But if one comes to investigate the complaints, one finds that the fault is with the man himself rather than with the system. He is, more likely than otherwise, not a genuine woodsman, but a ne'er-do-well from the city, who merely drifts into a shanty periodically when he cannot find employment in town and his last nickel has disappeared into the pocket of the saloon-keeper. Men of this kind are seldom a success in the bush; they cannot endure solitude, and are for ever craving for the bar-room and its blandishments.

Without suggesting that the individual who recently aired his views in the Magazine Section of the Ottawa Journal on the life of the lumber-jack is a man of this stamp the whole tone of his article seems to suggest that, although he signs himself "Woodsman," his experience in that capacity is somewhat limited. He speaks in generalities, in fact the whole "sting" of his complaint is to be found in the flaring headlines, rather than in the article itself. The headlines are as follows: "Heartless Treatment Is Charged.—Methods in some Lumber Camps Scored.—Medical Attendance System a Farce.—Men Cannot Quit Jobs and Secure what Really is Due to Them.—Some Opinions on Conditions in Camps."

With these headings "Woodsman's" tale of woe is served up to the Journal's readers. Well, if "Woodsman" has been harshly treated himself, or knows of others who have been, he certainly fails to give any facts or data which would enable the authorities, or anyone else who felt so disposed, to investigate his case and attempt to effect some redress. He starts out with the bald assertion that "the lumber-jack's life is not by any means always a happy one." A humorous song which attained a wide popularity a few years ago had as the opening lines of its chorus "A policeman's life is not a happy one," and the same sentiment might be applied with equal truth and force to a host of other trades and callings.

## The Charges in Brief

Summarized the sum and substance of "Woodsman's" complaint seems to be as follows:—

Employment agents engage men by promising "alluring wages" with camps near the railroad. Then they ply the men "with a few quarts of 'fire-water'" until they are on the train, and well on their way to their destinations. When they "come to" (that is after their heavy potations) "they find themselves off the train with forty or fifty miles to walk to camp." The foreman, "who is usually a burly fellow" sets them to work with very poor tools and if the man does not do the amount of work required of him he is thrown on his own resources. "Supposing he gets dissatisfied about the food which is very seldom good," the article proceeds, "then he is promptly paid out at whatever wages the foreman sees fit to give him on the grounds that he is breaking an agreement." Complaint is also made of the practice of charging the shantymen medical fees; and that the doctors assigned to the camps are mostly young men just graduated with no practice whatever, and "they come when they please." Finally when the man leaves the camp he is probably in debt or has not half of what he thought he had earned."

If "Woodsman" has been subjected to unjust treatment in some shanty, he has certainly made out a weak case, and one which really deserves no answer but for the fact that he conveys the impression, wittingly or unwittingly, that what he has written applies to lumber camps in general. His arguments may therefore be briefly answered.

With reference to his remarks about alluring wages; a man before he leaves the town in which he hires usually signs an agreement in which the wages are duly specified, so that he can easily satisfy himself on that score before he starts. If he has his wits about him a man should be able to ascertain, by a few enquiries, how far a camp is from the railroad, and if the distance is too far he can make up his mind to remain at home. But apart from this the true woodsman is a hardy individual, and knows that sometimes these long tramps into camp, although they are perhaps not always pleasant are an essential part of his calling. There are hundreds of men who have grown old in the shanties who have covered long distances on foot on entering and leaving camp every year, who are still happy and contented with their lot.

The statement that men are given "a few quarts of 'fire-water'" to lure them away really requires no answer. Men who are tempted in this way are usually ready to accept liquor at any cost, and if they make a bad bargain owing to their befuddled condition they cannot expect very much sympathy. They are better off where they are far removed from the temptation of drink.

The statement that the men are supplied with bad tools is also far-fetched. A competent foreman will see that his men are equipped with proper tools for he knows that it is the only way to get the full amount of labor in return for the wages which are being paid. It would be false economy to send men to work in the bush with tools which were useless. There are however, men who are continually losing their axes or, worse still, break them in fits of temper, and a foreman may well feel annoyed when such instances occur.

The statement that "the food is very seldom good" is not borne out by the facts. A wonderful improvement in the cuisine of the shanty has taken place in recent years, and lumber firms know that the way to retain their men, and obtain the best results, is to supply them with good food. A careless or incompetent cook will do more to make the men "jump their jobs" than anything else.

As to the complaint that deductions are improperly made from the men's wages, instances do undoubtedly occur where this is done, and it is sometimes a real grievance with the shantymen. Unfortunately there are some foremen who think that a man, whether he be under agreement or not, has no right to leave the shanty until it pleases those in authority to bid him go. Men, no matter how comfortable their surroundings, will sometimes become dissatisfied and desire to leave. Now a dissatisfied man around camp is little good to anybody. His dissatisfaction is infectious; it spreads to others; he is better out of the way and the foreman should allow him to go with as good a grace as possible. To make an improper deduction from the man's wages in order to "get even" with the man is unfair, and causes discontent amongst the other men when it reaches their ears, as it is bound to do. Moreover it really is a form of petty tyranny.

## A Commendable Suggestion

In this connection it is a pleasure to point to one good suggestion—not a new one by any means—in "Woodsman's" article. He suggests that the Government should appoint inspectors to visit the camps and see that the shantymen are properly treated. This has a good deal to recommend it; and there is no good reason why the employers should object to it. It would be possible to devise a scheme by which the men could lay their complaints before these inspectors, who should be given certain powers to adjust differences which might arise, and to adjudicate upon the justice or otherwise of any deductions made in the men's pay.

As to the assertion that when the men finally leave camp they usually are in debt or have not half what they thought they had earned, the thrifty shantyman, who has put in six months in the bush can nowadays "pull out" at the end of that time with anything from \$150 to \$200 in his pocket—a sum of money which he never could accumulate by working in town. "Easy come and easy go." Sometimes he spends it all foolishly in a week or two but that is nobody's fault but his own.

The charge made for medical attendance is a subject on which many shantymen feel they have a grievance, and has already been dealt with in these columns. The complaint that the camp doctors are young men who have just graduated is one so trivial that it may pass unnoticed. Doctors have to commence practice some time, and men living back in the bush can hardly expect to be attended by the highly-feed specialists of the cities.

### Causes and Effects of Forest Fires

An interesting bulletin (No. 117) has been issued by the United States Forest Service, dealing with forest fires, their causes, extent and effects, with a summary of recorded destruction and loss. The bulletin was prepared by Fred. G. Plummer, Geographer. It contains a most interesting discussion of the causes and effects of forest fires, and presents a number of useful tables giving statistics of all the known important fires which have occurred in North America.

In discussing the contributory forest causes of fires the bulletin says: "Artificial litter on the forest floor, such as slash, is even more dangerous than natural litter. The refuse from bad logging becomes exceedingly inflammable as it dries out, and since it usually includes a large portion of the trees cut, burns long and fiercely. The history of logging in the United States shows that cut-over areas are in most cases so severely burned as to make their natural restocking with young growth exceedingly problematical. When a fire, instead of sweeping rapidly over the ground, burns long because of the large amount of fuel, it not only destroys the humus and duff, but the intense heat changes the chemical composition of the top soil. Forest fires may burn over the same area several times. If the first conflagration kills the stand without consuming it, the area within a few years will be covered with a large amount of dry, inflammable litter. Moreover, there will in all probability be a dense growth of young trees, which, if conifers, will not only contribute fuel to the next fire, but perhaps render it so hot as to consume everything, leaving no chances for further reproduction from natural seeding.

"Insect depredations and forest fires are interrelated. Insect-killed timber furnishes dry fuel for the flames, and the damage is thereby increased. A forest fire in an insect-infected area will effec-

tually destroy great quantities of the insects, but, on the other hand, insects may advance over a burned area and kill fire-injured trees which otherwise might have recovered." Dr. Hopkins believes, however, "that injuries by fire are not as a rule an important factor in contributing to subsequent depredations by bark beetles."

The historic forest fires which have occurred in the United States and Canada are shown in the following table:

| Date            | Name of Fire | Location            | Area burned (acres) | No. lives lost |
|-----------------|--------------|---------------------|---------------------|----------------|
| 1825-October    | Miramichi    | Maine and N.B.      | 3,000,000           | 160            |
| 1837-?          | Seboois      | Maine               | 130,000             | ....           |
| 1846-?          | Yaquina      | Oregon              | 450,000             | ....           |
| 1853-May        | Pontiac      | Quebec              | 1,600,000           | ....           |
| 1860-?          | Nestucca     | Oregon              | 320,000             | ....           |
| 1868-September  | Coos         | Oregon              | 300,000             | ....           |
| 1868-September  | St. Helen    | Wash. & Oregon      | 300,000             | ....           |
| 1871-October    | Peshtigo     | Wisconsin           | 1,280,000           | 1500           |
| 1871-October    |              | Michigan            | 2,000,000           | ....           |
| 1876-?          | Big Horn     | Wyoming             | 500,000             | ....           |
| 1880-September  | Bagot        | Quebec              | 288,000             | ....           |
| 1881-September  | Michigan     | Michigan            | 1,000,000           | 138            |
| 1891-May        | Comstock     | Wisconsin           | 64,000              | ....           |
| 1894-July       | Phillips     | Wisconsin           | 100,000             | 13             |
| 1894-September  | Hinckley     | Minnesota           | 160,000             | 418            |
| 1902-September  | Columbia     | Oregon & Wash.      | 604,000             | 18             |
| 1903-April-June | Adirondack   | New York            | 450,000             | ....           |

| 1910-October    | Baudette     | Minnesota & Ontario | 300,000             | 42             |

# Forest Protection Problems Discussed

Addresses Upon Patrol Work Delivered at Recent Forestry Meeting in Seattle—Many Canadians in Attendance—Next Meeting at Vancouver

At the recent meeting of the Western Forestry and Conservation Association, held in Seattle, Wash., a large number of Canadians were in attendance by special invitation and the association decided to hold its next annual meeting in Vancouver, B.C. Among the numerous interesting addresses delivered at the meeting was one by H. R. MacMillan, Victoria, B.C., Chief Forester of British Columbia.

After thanking the association for their neighborly action in inviting British Columbia to take part in the conference, Mr. MacMillan complimented them upon their excellent work and then discussed conditions in British Columbia and in the western States. Referring to the problems of reclaiming mountain lands Mr. MacMillan said:—

The greatest obstacle to overcome is, of course, the perishability of the crop at every stage of its life by fire. In the past, owing to many causes, it was thought impossible to overcome this obstacle, but your efforts have proven the contrary. And your method has the simplicity of genius. You have simply made the industry bear the cost of protection just as every industry must bear the cost of measures to insure its success. So long as efforts at protection of forests from fire were sporadic and intermittent the owner of timber found that efforts at protection simply means lessened profits. But when every timber owner spends money for protection you have found that automatically the cost of protection becomes one of the items of the cost of production exactly like interest, surveying, cruising, insurance, etc., and eventually the consumer pays for it, as he should. Further you find that you now receive help in protecting your crop from the citizen, the state, and from your Federal Government, and that at last forest fire protection is an established policy. The protective problem has now become merely a question of methods and details such as confront any industrial problem. Every lumberman and forester and every citizen of the United States and of Canada also offers you his congratulations on what you have done.

Forestry in Canada is the result of progress in U. S. forest fire protection and education.

### British Columbia's Forestry Problem

As you probably know, the northern half of British Columbia is practically unexplored and uninhabited except by trappers and prospectors. The southern half, which is nearly as large as Oregon, Washington and Idaho, is almost entirely timbered except for the barren summits of the mountains. The total timbered area in this barren southern half of the province is about 100,000,000 acres, two-thirds of which is capable of producing merchantable timber. The

forests along the coast are not greatly different from those along the coast of Washington and Oregon except that the Douglas fir drops about 250 miles north of the international boundary, and is replaced by spruce, hemlock and cedar, proportion of fir smaller. On the low altitudes east of the Cascades, the forest is similar to those in north-eastern Washington, being a mixture of yellow pine, fir, tamarack, white pine, cedar and lodge pole pine. The yellow pine drops out about 150 miles north of the boundary and is replaced largely by spruce. With the exception of a few limited yellow pine areas the forest is everywhere dense, and has a heavy accumulation of debris, which constitutes an exceptionally bad fire risk although, of course, on the northern coast the risk is lighter owing to the heavy rainfall. In the past, fire has been particularly destructive in British Columbia, not more than 20 per cent. of the forest area being covered with a virgin stand. There is, however, a very large area of excellent second growth which, if protected from fire, will yield merchantable timber by the time the virgin timber is cut off, which will probably be 50 or 60 years hence. The area of agricultural land is proportionately very small. The greatest industry in B. C. for 50 years or more will be the lumber industry and this industry is absolutely dependent on the protection of the virgin and second growth forests from fire.

Last winter the legislature passed a most excellent forest law which provides for the regulation of railways, the disposal of slash along roads and other dangerous places, the construction of fire breaks about logged-off areas, requires settlers and others to obtain permits if they wish to burn slash during the season from May until October, and makes provision for the establishment of a Forest Department to have charge of the enforcement of the fire laws and a patrol and fire fighting force of men.

### The First Year's Patrol Results

The province experienced an extremely dry spring before the patrol force was put on and a number of serious fires occurred in May. The summer was a very wet one, and no trouble with fires was met with except in the Northern part of the province. The patrol force consisted of seventeen divisional wardens and about one hundred and fifty district wardens or patrolmen, and the total cost of patrol and fire fighting amounted to about \$175,000.

It being the first year of the establishment of the Forest Branch, not much was done in the way of slash burning, trail, telephone or lookout construction, but information necessary to the preparation of plans for such work was collected, and it is expected that good progress will be made next year.

The funds for fire protection are obtained by levying a tax of

one cent. an acre on all timber lands in private ownership or under lease of license, an equal amount being paid into the fund from the general revenue of the province. In most of the timber lands paying this protection fund the Government has a financial interest amounting to fifty cents per thousand when the timber is cut, so that both the timber owners and the Government are equally interested in establishing a first class fire patrol and fire fighting system.

#### Results Secured in Western States

We from Canada came to learn. We have heard that you protect 500 billion feet or 20,000,000 acres; that in doing so you engage 450 patrol men. By so doing you reduce the annual fire area to 14,000 acres. You find it necessary in so doing, even in the well settled and developed United States, to supplement existing facilities with new roads, trails and telephones. We find our problem even more serious. Our 300 billion feet is scattered over 200,000,000 acres, an area ten times as large. Our population in this area outside of the cities is about half the population of Seattle. We have fewer roads and trails, and up to the present our patrolmen number only 150. Our patrolman has 30 times as large a country as yours, with fewer trails and less population. Do you wonder that sometimes he gets discouraged?

As the president of North Idaho Association has pointed out—everything depends on the type of ranger or patrolman you secure. If this is the case in your small districts it is infinitely more so in our large districts. We must have the best men available. Speaking for the Government, I can say that the Forest Branch is anxious to have the heartiest co-operation and the vigorous support of the lumbermen in building up a corps of fire wardens and patrolmen qualified by experience, energy and character for this work; and, with their help, I believe we will be successful.

#### Co-operation the Foundation of Progress

One of the most effective and interesting addresses delivered at the meeting was by Mr. D. P. Simons, Forester of the California Forestry Association. Mr. Simons dealt in particular with the co-operative features of the protective movement. This co-operation he stated was commencing to develop an absolutely new type of human endeavor—the trained forest fireman. In former days they had to depend upon men of superior personal efficiency, but who had not had any experience in the actual work of patrolling the forests and fighting fire. After the men had been on the job year after year and the system of which they were part, began to be crystallized, the men obtained a training which could not be secured formerly. They were now commencing to graduate a trained force which would be of the utmost value in future work. It seemed to him, in fact, that they were entering a new era, requiring the abandonment of old methods of individual responsibility and the development of co-operative opportunity.

Next to co-operation, communication was probably the most featured line of work. The tendency was toward substantial construction rather than makeshifts. An important and almost universal development during 1912 had been the systematizing of lookout work by means of protractor dials enabling observers to telephone the bearing of fires. Two or more such readings permitted accurate location. Equipment was constantly improving. He believed that many forms of equipment would become standard in the near future.

Describing the methods used by the association, Mr. Simons said that in selecting men they took into special consideration the character of the district to be covered. While there is active logging and the menace is from such operations, a man familiar with this class of work and its necessities is far more successful. However, in a district where the menace arises from the activity of ranchers in clearing land, a man familiar with the farmers' side of the question is employed. Both are familiar with the best methods of burning slash, as the removal of this menace at the proper time is most to be desired. In the more remote timber district experienced woodsmen are employed, familiar with all roads and trails, camp sites, fishing streams and frequented places, and with the methods of hunters, campers and fishermen. All much be in sympathy with the work and usually have had previous experience. They receive their appointments not through political or personal influence but on account of their qualifications for the job, and are kept as long as they can make good. When possible we prefer to have our members turn over to the association old and tried employees, like cruisers and foremen, for the leading positions.

A patrolman reflects the attitude of the state and the association towards the enforcement of the laws, so to be successful he must be fair and impartial in his administration and conduct himself personally in a manner to command the respect of those with whom he has to deal. In posting notices, distributing publicity matter, issuing permits to burn, calling attention to dangerous slashings and unusual hazardous conditions, advising as to their disposal or protection, he bears in mind that his function is to instruct and win friends

for the cause, as well as enforce the law, thereby getting the sympathy and co-operation of all classes in the work.

Patrolmen and fire wardens have gradually become familiar with the fire laws under which they are operating, and with their interpretation. They have also learned the value of evidence, what is competent and incompetent, and how best to present it to the proper officer for prosecution. Some associations have accomplished this by employing one or more men with special experience in this line of work, and as inspectors they travel around among the rangers offering advice and suggestions, and when a violation of the law is called to their attention they assist in working up the case. Much has been accomplished in this direction.

In the past many cases failed because of insufficient evidence although conviction seemed certain and there was no question as to the violation of the law. During the last year heavy fines, and in some cases terms of imprisonment, have been imposed where formerly the cases would have been dropped or only a nominal fine imposed. This also goes to show that the work of the Western Forestry and Conservation Association in arousing public sentiment is bearing fruit.

Another feature of association work is looking out for trespass. Maps showing accurately the lands belonging to contributing members of the association are placed in the hands of patrolmen and fire wardens and those not familiar with such work are instructed by the inspectors or chief fire warden as to boundary lines, corners, etc. Illegal cutting of timber is reported at headquarters immediately and the owner is notified. This feature of the work has been very valuable during the past year and should be developed. Some associations also make detailed and accurate reports of fire damage to non-resident owners.

There has been a wonderful improvement in the attitude of logging operators toward fire work. Rangers, inspectors and fire wardens are welcomed at the camps and mills, and ideas exchanged, suggestions made and acted on, showing a sympathetic co-operation in the work. This has resulted in organizing experienced slash-burning crews who are experts in their line of work. These men are often kept on long after the close of the season. The result is that large areas of dangerous slashings have been gradually cleared up.

In conclusion, Mr. Simons described the method of co-operation now in force in the State of Washington showing how the Forest Service, the Association and the State Forester were working hand in hand, reducing the proportionate cost and increasing the general efficiency of the work.

#### Lumbermen Not Doing Their Share

— An interesting address was also delivered by Mr. R. E. Benedict, Victoria, B.C., Chief of Operation, Forest Branch of British Columbia. After describing the methods of ownership on timberland in British Columbia, Mr. Benedict said that the lumbermen of the province had failed in a measure to give sufficient encouragement to the government in its work of fighting forest fires. "In my opinion," he said, "The one thing which is most badly needed in British Columbia at the present time to insure efficiency in patrol is the assistance and support of the lumbermen. By this I do not mean the support of the individual lumberman; I think we have that, but the powerful backing of the lumbermen as the united representatives of a great industry. Mere criticism of the methods or personnel of the patrol force will have little effect unless they are followed up by the efforts to see that the faults are corrected. This can only be attempted by a strong body and the results to be obtained, the protection of the very source of the lumber industry, certainly justify the lumbermen in concerted action. Therefore, while I think there is no opening in British Columbia for fire patrol associations, such as have been formed in the Northwest states, I do believe that there is great need of the united action of all the lumbermen and limit holders in British Columbia to see that the government selects the best men available for patrolmen, expends the funds paid by the lumbermen in an equitable way, and adopts all the measures and methods which experience in other timber regions has shown to be most effective in preventing and suppressing forest fires."

#### Clyde Self-Propelling Logging Machinery

The Clyde Iron Works, Duluth, Minn., U.S.A., are well known to the users of logging machinery, not only as producers of an unexcelled variety of machines, but as producers of unique, descriptive, illustrated catalogues upon which they devote a great deal of time and expense and which are probably unequalled by any similar catalogues of the present day. The latest example is an illustrated catalogue of the Clyde Self-propelling Logging Machinery. The book is splendidly published, on a high class of paper, excellently illustrated and with border designs of a particularly suitable character. The illustrations and the text give one a most graphic conception of the work done by the Clyde machines and also of the thoroughness which characterizes all the work done by this remarkable company.

### A New System of Logging and Fire Lines

The United States Forest Service has issued an interesting bulletin No. 113 upon "Methods and Apparatus for the Prevention and Control of Forest Fires, as Exemplified on the Arkansas National Forest." The bulletin is written by Daniel W. Adams and contains a concise and interesting description of the methods adopted in the Arkansas National Forest. A number of useful illustrations are included. The most important section of the bulletin relates to a new system of logging and fire lines. Relating to this matter, the bulletin says:

Ordinarily logging operations are commenced near the mill and the timber is removed in successive steps as the logging road is built up the draws. Experience has demonstrated that this method is

Fig. 6—A typical lumbering area

Fig. 7—A new location for fire lines; the dotted lines show the old location at the tops of ridges

to blame for many serious fires, since the slash and brush piles next to the mill become dry and are almost sure to catch fire from engine sparks or from the carelessness of logging crews passing and re-passing the cut-over area while removing the timber from successively more distant portions of the area.

To avoid this risk the lumber operator should first construct the main line for his logging road from the mill practically to the limits of the operations (shown in the figure at X). The uppermost spur lines (B and C) would then be constructed and the timber removed from the first unit. After this has been done the upper spur tracks should be removed and laid on the tie beds, in next lower units (at A and D), which in the meantime had been graded. The timber is

Fig. 8—Effect of the new location for fire lines

cut from the units served by these tracks, and the area closed in turn. The rails (from A and B) are then relaid (for units 4 and 5), and the operation continued until the entire area is logged. In the meantime, if fire breaks out on any unit which has been logged, it can be restricted to one unit by the help of the fire lines which separate the units.

In the construction of these temporary lines on the Arkansas National Forest the work was done very cheaply by felling the dead timber near the line, particularly on the outside, raking and burning

a strip from 40 to 60 feet wide on the ridge lines, and cutting and rolling clear of the line all dead and down timber.

Irrespective of logging, a new location is proposed for fire lines in place of the generally accepted position on the crests of ridges. (Fig. 7).

It is well known that wind has a horizontal direction. However, when obstructed by a mountain, it conforms to the slope. When a fire is burning, by reason of differences in density of heated air, a strong undercurrent is set up which has a rapid ascending velocity with a spiral motion. This motion, together with the natural wind velocity when the fire reaches the crest, projects the burning embers and sparks far over the top. Therefore, the present system of fire lines on top of the ridge seems inefficient.

In the proposed plan, however, the burning embers will fall within two fire lines, which are placed well under and on either side of the mountain top. (Fig. 8). It can be reasonably expected that an ordinary surface or light crown fire can be held at the first line; however, if the fire does break over, the second fire line, under the new system, furnishes a basis for back firing and fighting the more slowly burning, descending flames with the improved apparatus.

Furthermore, there are strong arguments against the location of the fire lines on crests; First, the cover on top of the ridges should not be disturbed; second, the fire lines on the very backbone of the mountain usually cannot be utilized as trails, because of the rough and irregular profile of the ridge line. It is entirely feasible, on the other hand, to locate and grade the fire lines approximately along contours, so that they will serve for patrol and for the transportation of supplies and equipment. However, this plan of double-line location is not intended to apply to ridges with crowns so level that they are practically smooth and easily graded.

### Calendars for 1913

One of the most attractive calendars which we have ever been fortunate enough to receive has reached us this year from the Estate of James Davidson, manufacturers of flooring, clapboards, lumber, sash, doors, blinds, etc., of Ottawa, Ont. The calendar is unusually large, with the date figures in type of sufficient size to be seen across any large office. A beautiful reproduction of a pastel drawing in colors, embellishes the calendar. The picture is entitled "In Meditation Sweet," and is a reproduction of the work of Mr. Frank H. Desch. The picture represents a beautiful young lady seated in an arm chair. The whole color scheme and design is one which must be seen to be appreciated. Those who are fortunate enough to receive a copy from the Estate of Jas. Davidson will unquestionably give it the place of honor among their Christmas and New Year's souvenirs.

The Fred S. Morse Lumber Company, Springfield, Mass., have sent to their friends a unique and useful souvenir. In former years they have been in the habit of sending an attractive calendar. This year their souvenir is in the form of a pin cushion in handy form for use upon a busy man's desk. Those who are fortunate enough to receive one of these souvenirs are certain to make frequent use of it and to be much pleased that they are numbered among the friends of the Fred S. Morse Lumber Company.

Edward Clark & Sons, Toronto, have favored their friends as usual with an exceptionally beautiful calendar for the coming year. It is decorated with a colored picture of an attractive young lady standing beside a vase of roses on a table. The color scheme of the picture and of the mount is exceptionally attractive. The firm of Edward Clark & Son, whose office is in the Stair Building, Toronto, is well known among the most successful hardwood manufacturers and dealers in Canada.

The Waterous Engine Works Company, Limited, Brantford, Ont., have issued a large and exceptionally useful calendar upon which are printed views of the company's works and of various examples of their machinery. The calendar pad is exceptionally large, the figures being of a size which can easily be seen across any large office. Those who are fortunate enough to receive a copy of this calendar are certain to give it a hearty welcome.

The Fraser-Bryson Lumber Company, Limited, wholesale dealers and selling agents for Fraser & Company, lumber manufacturers, Ottawa, Ont., have favored their friends with a calendar of most attractive design, decorated with a hand-colored photograph of a beautiful bit of scenery upon the upper Ottawa River. The whole is tastefully mounted upon buff colored cardboard edged in dark brown.

The C. A. Larkin Lumber Company, Toronto, have favored their friends with a large and useful calendar for the year 1913. The figures upon the calendar pad are large and clearly printed and each month contains full information regarding the four quarters of the moon.

Factory Products, Limited, Toronto, dealers in motors, generators, switchboards, etc., have issued a unique calendar containing a striking picture of a lineman working at the top of an electric pole. The calendar is simple in design, but at the same time, distinctive.

# The Linderman Automatic

## Adapted for Interior Finish and

---

The letter on the opposite page explains how the Western Manufacturing Company is using our machine to do its various kinds of work.

In addition to the work mentioned, the machine can also be used for building up narrow strips converting them into sheathing or shiplap; for using the cuttings from the sash and door department, converting them into cores for veneered doors; for joining up narrow width stock in order to make good clear stiles, rails and panels for solid doors and in fact to build up any width lumber of any length up to four inches in thickness.

Messrs. Canadian Linderman Company,  
Woodstock, Ont.

September 24th, 1912

Dear Sirs:—

In reply to your enquiry of September 21st, we are pleased to advise that the sixteen foot Linderman Glue-Jointing Machine which we purchased from you some months ago is still giving entire satisfaction. For the most part we are using this machine on glueing up Oak, Birch and Mahogany, Counter-Tops, Panels, etc., which we use in our Cabinet making department. We have also used the machine with success in making wide boards, such as base, etc., out of narrow strips of quarter sawn Oak. The work thus done has been perfect in every particular and we have not yet received a single complaint on our glue-joints. This is of course a considerable improvement over the old method of making a square joint, as we were never sure of just how the joint would stand after leaving our works. So great has been the volume of business which we have handled this season, that if it had not been for the installation of your Glue-Jointer, we could not have handled nearly the amount which has come our way. We have also found that the loss of material on account of glue-jointing has been reduced to a minimum, while the quantity of glue which we now use is infinitely less than that which was formerly used for making square joints. Wishing you every success, we remain,

Yours truly,

THE WESTERN MFG. CO., LTD.,

*T.A. Wilson*

Manager.

problem, we will be glad to call  
advise you regarding the same

# THE WOODWORKER

## The Best Speeds for Woodworking

The speed at which machines should run to give the best results is a problem that operators should understand. To prove that it is an intricate, or at least an undetermined matter, we need only refer to the diversity of opinion among mechanics, and the want of any opinion at all with a great many.

If the speed of a machine could be calculated from that required for the cutting edges alone, we should have a general rule to apply, but the limit of speed is more frequently taken from the condition of the spindles and bearings than from the cutting action.

Cutterheads more than four inches in diameter can generally be moved as fast as the edges require to run to give a good result, say within 5,000 revolutions per minute or 5,000 feet of movement with the edges. But when the cutterhead is smaller, the spindles are not diminished in the same ratio, and the speed must be slower.

### Rotation Speed and the Feed Rate

The cutting movement should, as far as possible, be a basis for estimating speed, instead of the number of revolutions made by a spindle. A cutter on a 3-inch head, making 4,000 revolutions per minute, is only moving as fast as one on a 6-inch head at 2,000 revolutions per minute, and still it is quite common and a habit hard to avoid to consider all spindles wanting a common speed from 3,000 to 5,000 revolutions per minute without considering the movement of edges.

Perhaps as good a rule as can be used is to assume a 4-inch cutterhead to make 4,000 revolutions per minute as a base or unit of speed. This makes approximately 4,000 feet a minute of cutting movement; then increase 500 feet a minute for each inch of diameter added to the cutterhead. This makes, at 10-inch diameter, a speed of 7,000 feet a minute, and for 16-inch diameter 10,000 feet a minute, which could then become a constant for all larger diameters. This, it must be remembered, is assumed for strong cutterheads of forged or malleable iron, steel or brass, and not cast iron, which should not be used for high speeds.

Reversing this rule, from 4 inches diameter, with 4,000 feet of cutting movement, deduct 750 feet of the movement for each inch of diameter the heads are reduced. This, at 1 inch brings the cutting speed to 1,750 feet a minute, with 7,000 revolutions of the spindle, a practical limit.

Boring machines, to operate screw-bits, should run from 1,000 to 2,000 revolutions per minute, according to the kind of wood or the size of bits used. For all reciprocating machines there is a general rule that applies which is to run them as fast as they will stand. In other words, their work always demands more speed than it is possible to have. This is certainly not a very comprehensive rule, but another one, infinitely better, is to use them only when they cannot be avoided, no matter to what purpose they are directed.

For ordinary reciprocating machines the following list of speeds is given, for which I trust the reader will not require any special data, but accept it on faith and as a matter of experience:

#### Revolutions per minute

|                                                     |             |
|-----------------------------------------------------|-------------|
| Resawing machines . . . . .                         | 250 to 300  |
| Scroll-saw machines . . . . .                       | 300 to 400  |
| Jig-saws with spring tension . . . . .              | 500 to 800  |
| Jig-saws with unstrained saw . . . . .              | 800 to 1500 |
| Mortising machines with moving table . . . . .      | 300 to 450  |
| Mortising machines with chisel feed table . . . . . | 250 to 350  |
| Mortising machines, heavy, for car work . . . . .   | 200 to 300  |

Circular saws can be driven at a speed of 7,000 to 10,000 feet a minute. The manner in which they are hammered has much to do with the speed at which they may run, and often when a saw becomes limber and deviates it is a fault of the hammering instead of the speed. When thick on the periphery they will not stand speed, and become weaker and bend more readily when in motion than when still.

### Saws and the Speeds

On the contrary, if properly hammered, a little "tight," as it is termed, on the periphery, they become more rigid when in motion up to a certain limit. The cause of this is that steel is elastic, and is stretched by the centrifugal strain in proportion to the speed, which is greatest at the teeth and diminishes to the centre.

If saws have a tendency to spring, also want of rigidity, it can be remedied in most cases by hammering.

Cutting wood is like cutting iron; hardwood cannot be cut at as high a speed as softwood. Any one who has had experience in working boxwood, cocoa rosewood or lignumvitae, will have noticed that

a high speed soon destroys edges by over-heating, especially with boring or turning tools that act continuously.

### Speeds for the Several Woods

The use of these hard varieties of wood is, however, so exceptional that the matter need not be discussed here, further than to say that a molding or planing machine that is to run mainly upon walnut, ash, oak, or other hardwood will give better results if run a fourth slower than for softwood.

|    |        |       |       |    |
|----|--------|-------|-------|----|
| 1  | 1,750  | 7,000 | 875   | 8  |
| 2  | 2,500  | 5,000 | 937   | 9  |
| 3  | 3,250  | 4,333 | 1,083 | 10 |
| 4  | 4,000  | 4,000 | 1,125 | 11 |
| 5  | 4,500  | 3,600 | 1,125 | 11 |
| 6  | 5,000  | 3,333 | 1,145 | 11 |
| 7  | 5,500  | 3,142 | 1,277 | 13 |
| 8  | 6,000  | 3,000 | 1,406 | 14 |
| 9  | 6,500  | 2,880 | 1,444 | 14 |
| 10 | 7,000  | 2,880 | 1,445 | 14 |
| 11 | 7,500  | 2,706 | 1,450 | 14 |
| 12 | 8,000  | 2,666 | 1,465 | 15 |
| 13 | 8,500  | 2,615 | 1,525 | 15 |
| 14 | 9,000  | 2,576 | 1,541 | 15 |
| 15 | 9,500  | 2,533 | 1,551 | 15 |
| 16 | 10,000 | 2,500 | 1,512 | 15 |
| 17 | 10,000 | 2,352 | 1,470 | 15 |
| 18 | 10,000 | 2,222 | 1,417 | 14 |
| 19 | 10,000 | 2,105 | 1,382 | 14 |
| 20 | 10,000 | 2,000 | 1,370 | 14 |
| 24 | 10,000 | 1,666 | 1,250 | 13 |
| 30 | 10,000 | 1,333 | 1,083 | 11 |
| 36 | 10,000 | 1,111 | 987   | 10 |
| 40 | 10,000 | 1,000 | 1,000 | 10 |

The cylinders of planing machines, being strong and safe, and the rate of feed required as much as possible, they can be run at a speed one-fourth more than that given in the table. Line shafting should in all cases run as fast as the bearings will stand with safety; 200 to 250 revolutions per minute for 3-inch shafts, and 250 to 300 revolutions per minute for 2½-inch shafts, make a good rule, to be modified, of course, by the kind of bearings that are used. Countershafts can run three times that fast.—Wood-Craft.

### How I Fed a Matcher 250 Feet per Minute

It is often said by men in discussing fast feeds, that it is impossible for a man to feed a machine at the rate of feed mentioned above, but as the writer has seen the development of the fast feed machine and has fed them all the way from the forty foot stage to the present rates, I feel qualified to make the statement that the rate mentioned is not only possible, but is comparatively easy.

The secret of the whole thing is in reducing the number of motions of the body to the minimum, as it takes time and strength to put the body in motion.

The first thing I do to get ready for feeding fast, is to make a wooden roll stand of heavy stuff with floor pieces of 2 x 10—5 feet long. To these I spike on uprights of the same material, high enough to place the roll on. These uprights are slotted for the roll bearing by boring a hole the same size as the shaft and cutting down from the end to the hole.

I then place this roll back of the machine far enough so that I can break down on the stock and draw it towards me with a light pressure of my hands when the truck is placed with the front end about two feet from the end of the machine table.

I then have the trucks placed one on each side of the roll stand with the front ends as mentioned and the rear ends so that the sides of the two loads come nearly together, just about in line with the guide in the machine.

This will spread the front ends so as to allow plenty of room for action.

I then take my position between the roll stand and the machine, about even with the end of the loads, so that I can reach the ends of the stock. Lifting a piece from the loaded truck, I swing it over the roll which will leave it across the roll at a slight angle, and as I am getting it in this position I am looking at the side of the board to see if it is the good side, if not, I turn it with a quick twisting motion as I draw it to me. If this reverse side is not as good as the first side I saw, I turn it back and at the same time draw it towards the machine. All this can be done so quickly that the ordinary ob-

server will not notice that I have turned it at all. I find that it is not necessary to see both sides of all the stock, any way as experience enables me to see at the first glance just the kind of stock it is.

The character of the piece may be such that one side will grade higher than the other, but one soon learns to know the kind of piece that is this way. If I am feeding face down I look at the piece as I take hold of it, and if this side is good, I turn it as I draw it to me the first time, and if this other side is better than the first, I turn again as I start it towards the feed rolls.

If I am feeding heavy stock such as 2 in. flooring or dimension stock, I very often stand on the opposite end from that I have spoken of,—especially if the stock on the truck is all of one length.

I have found that with a little practice a boy can feed with the roll stand to help him, easier than a man can taking off the truck direct.

If the stock is put to the machine direct from the rip saw or edger, then I use some benches to keep it about the proper height which is not lower than my knees. This keeps me from stooping and raising up which takes time.

By using the foregoing method I have fed 9 foot car siding at 250 ft. per minute with no difficulty and this is over twenty-seven pieces in one minute.—A. F. H. in Berlin Quality.

### The Brazing of Large Band Saws

By H. F. George

Perhaps one of the most difficult things found in hand filing is the making of brazes; not just exactly the making of a braze, but having one that will finish up the exact thickness as the rest of the saw, and yet the proper tension and temper, so it will not bend every time off the mill.

I don't think there is any one thing in the filing room that looks quite as bad as a lot of poorly-made brazes, and if one is in the habit of making poor ones, he soon finds the room full of them. You might say, put your saws up so you will not need to make brazes. I don't think that would be much of an argument, for at the present time I have two saws on the floor that require a piece in each one; in other words, I have four brazes waiting for me. And so it is with all of us; if it were not for those accidents we would not need to make nearly so many.

I have seen brazes that looked as if they had the smallpox or some other contagious disease—hardly a place for 6-in. on either side of the braze that you could not put your finger on without touching a bright or black spot, caused by the hammer, and which goes to show that the braze is uneven in thickness or poorly tensioned.

Now it is almost impossible to put even tension in a braze that is not the same thickness as the rest of the saw. It is like rolling a braze where you have put a piece in the saw, either thicker or thinner than the saw proper. It is alright rolling from the thick blade onto the thin, but when you roll the braze from the thin to the thick blade, then it is nearly a cinch you will have to use the hammer and hard anvil to help you out. I think the above illustration applies to a thin braze as well. I never had many brazes of this kind that would not always bend, and in time crack on either edge, and finally make necessary another braze.

It was the above experience that caused me to study out a way to make brazes that would be even in thickness, get the proper temper so they would not bend, and still be not too hard, to cause cracking. I am now making my brazes in the following way, and am having the best results I ever had:

First, I mark my saw where it is to be cut, then pull the tension for at least 6 inches on each side of marks. I don't pull just a little, but all of it, using a straightedge, and when tension is down to the straightedge, then level it perfectly and it is ready to cut. After cutting the saw, level both ends, being very particular that they are not dished either way. If you use a shear, it does not take much leveling, but if cut in the old way—with a chisel—one will find a great deal of work on both sides of saw; but the ends must be perfectly level in order to grind a nice, even lap.

I grind my laps quite thin and finish them with a file. I use a small tri-square to test my laps, being very careful that they are not concaved or convexed, but perfectly flat. I make laps in a 12-in. saw 11/16-in., and use 5/8-in. solder. In using solder narrower than laps you will not have so much to file off, consequently you are not nearly as liable to file a thin braze. I then make braze in the usual way, taking the irons off just as soon as they turn black. Now put saw on hammering bench, and, while braze is still warm, roll it out flat. It will roll and level down much easier than if left until it gets cold. I use the doghead hammer for this leveling, as it does not mark the braze up so much as the cross-face hammer. After braze is rolled and leveled flat, it is ready to file.

Now place a block, say, 2-in. thick, 6-in. wide and 12-in. long, under braze, and bend saw over it, by using two irons, one on each

side of braze. I think we all do this about the same way. Now file just the rough off, put saw up, level braze on inside, and file, being very careful to file solder so as to have a perfectly straight line. This gives the braze a nice appearance when finished.

After I have filed as much as is necessary, level again, then take some emery cloth and rub until perfectly smooth. By using dark oil and emery dust you can bring braze to about the same color as the rest of the saw; and after it is tempered and has made one run, you can hardly tell it from the balance of the saw.

After this is done, put saw down again and finish filing on outside of braze. In this filing be very careful to file just the solder, using a coarse file to start with, but finish with a fine one.

Many filers make laps heavy in order to have more to file off after braze is made. I did that for a long time, and nearly every time found my braze thin in some places. I think it much easier to make a nice one by bringing laps to a very thin edge, and then, when put together, just pick the solder off and not touch the saw at all.

Another very important process is to never put any tension in braze until you have it finished. In getting it ready, use a straight-edge to roll by, and just roll it enough to make it lie down nicely. You will find, if rolling it while yet warm, you can lay it entirely flat with the saw-stretcher, bearing up or down, whichever the case may require, to make it lie down, and then, as stated before, use the doghead for the rest of the work. Hammer as little as possible; in other words, strike as lightly as possible.

You now have 12-in. of saw without any tension, and, being in this shape and perfectly level, you can file without fear of filing thin spots caused by saw having too much tension, so as to come up through in places and remain down in others.

The braze being ready for tension, use 50-ft. circle first, for after it is tempered it will tension much better. I temper as a great many others do, using one of my brazing irons. Get iron red-hot and draw back and forth under braze until it becomes cherry-red all the way across, with exception of about 1-in. from each edge, then pour heavy oil on and let cool. Place braze in position, it will have a tendency to spring up through and will then level up nicely from outside, thereby saving the trouble of putting it up to level on inside.

I now consider the braze ready for such tension as I wish to carry. The width of saw governs this. Always carry a little less than rest of saw, as it helps to stiffen the braze.

I have probably taken a little more space than necessary, but for the benefit of the younger filers I wanted to make it as plain as possible; for if some of them are having the trouble I did with brazes bending, cracking and breaking from being too thin, they will appreciate the trouble I have gone to in order to make my method plain.—The Wood-Worker, Indianapolis.

### Transatlantic Shipments From Montreal

The following is the complete statement of exports of lumber to Great Britain and Australia from the port of Montreal for the past season:

|                                              | 1912        | 1911        |
|----------------------------------------------|-------------|-------------|
| Name of shippers                             | Ft. B.M.    | Ft. B.M.    |
| Watson & Todd, Ltd. ....                     | 33,217,881  | 30,663,444  |

| Railways, steamship lines and small shippers | 13,736,236  | 16,251,439  |
|                                              | 109,370,764 | 103,473,220 |
| Increase for season 1912 ...                 | 5,897,544   |             |

### Destination of Cargoes

|                                   | Ft. B.M.    |
|-----------------------------------|-------------|
| South Africa... ..                | 2,637,407   |
| Australia... ..                   | 129,381     |
| Great Britain and Continent... .. | 106,603,976 |
|                                   | 109,370,764 |

The returns for the Lachine canal show that 34,408 ft. more lumber passed through the canal during the season, as compared with the previous year. Vessels from the Lower St. Lawrence brought 17,357 cords of pulp wood to Canadian ports and 64,403 cords to American ports. Of pulp, 1,040 tons were for Canadian ports and 28,302 tons were for American ports.

A system for rejuvenating old trees has recently been tried in Toronto. The Brobest Forestry Company are in charge of this work, which consists of dynamiting the earth around the tree. This system has been used in the United States for some years and has given good satisfaction.

# The Retail Dealer and His Problems

Some of the Important Little Details in Yard Management

## The Little Details of a Lumber Yard

If anyone were to ask you to say at once, off-hand, how many pockets you had in the suit of clothes you had on, but few of you could give the correct number. So it is with the many little details connected with a lumber yard, says a writer in the St. Louis Lumberman. Of course, they vary in the different yards according to their size and varieties of stock, but there are certain, what you might call, fixed details that are common to them all. I have, at another time, mentioned a few of them and thereby probably set you to thinking of a few more that might have been noticed; and so in response to this, I will herewith present another string of what was omitted.

### Used to Be Given to Criticising

Once upon a time, when I was but "half-baked" in the business of running a yard, I used to have a tendency to criticise other dealers who didn't do things, as I thought they should; the way they should do them, was my way. I rather think this sort of egotism is common to all who think out their own methods and have formed the habit of carrying them into practice. So far, this is all right, but there is such a thing as becoming too much self-opinionated that will prevent the recognition and adoption of something else that is better than their own. We should always pray for strength to meet a new idea, no matter the source from whence it sprung, and with it, adaptability also to adopt and use it. A good deal has been said and written about caring for the molding stock in a yard, which has been instrumental in causing a number of dealers to change their own for other methods that seemed to them an improvement. Some have retained them, while others have failed to become suited and have returned to something more like their old way. I presume you understand that I refer to the change from the horizontal to the vertical method of storing moldings. No doubt some of you have experienced something on this line, and it would be interesting to know "You'uns" opinions, for, or against. Storing lumber or moldings on end has its advantages, no doubt. I do know that boards stored on end will dry out more quickly than laying them down the usual way, but the top will be dryer than the bottom. If you have a place high enough to store moldings this way, and prefer it, I have no criticism to make on the plan. It is more a matter of having plenty of space to get round in, and when one gets used to having it this way, I don't know that it makes much difference; if there is, it lies more in the "think so" of the party having it. The man, however, who has not the upper space necessary for end piling, can have his moldings kept in as good order and fully as convenient to get at in a good tight rack made on the usual horizontal plan. Every piece should be marked in some way to indicate the length. Some do this in figures, and some, with different colors of paint on the ends. The majority of dealers, though, shove in their moldings just as they get them and trust to luck to pull out the right length, when they want one. Molding is finish, and should always be regarded as such, and taken care of accordingly. And, as dust will accumulate in any kind of a shed, and even in a tight molding rack, the stock should be taken out every little while and cleaned off. No one likes to buy a dirty piece of molding, or casing. You may tell the customer he can clean it off, but he prefers to have it handed out to him clean; and he is right. It is not for him to do what the dealer should have done before. In these days, when stain is being used more than paint, it is more imperatively necessary to keep the casings, base, and other parts of the "trim" in a bright and clean condition, and no matter how you do this, it should be done all the time. In the small towns, where there are not more than two yards; the dealers ought to work together, at least enough to keep the same patterns of moldings and others of this class of "trim." The reason for this is obvious, though in reality, it works to the advantage of both dealers to have a uniformity in this class of stock, and besides, it sometimes saves the trade from a good deal of inconvenience, and often times loss. This is one thing in which a dealer cannot afford to be too independent.

### The Care of Doors and Windows

The care of doors and windows is another detail that is often neglected in a yard. What I have said about the keeping of moldings clean will apply also to doors. There may be sash rooms that are amply large enough for the purpose, but I have rarely seen one in the average country yard, and being, as they usually are, small, it makes it all the harder to care for this class of stock as it should be. The smaller it is the more necessary for keeping it in order, with everything in its place. There is, of course, a difference of opinion as to how best to keep doors in a stock room. Some claim that in piling them close one on the other, they will keep brighter than where

the air can get to them. There is no denying this, but the question arises, whether it is the air or the light that shades the fresh color of the wood as it comes fresh from the factory storehouse. This shading of the freshness of color is not all detrimental where paint is used in the finishing, but it will show, where it is finished in the natural, and therefore I think that the front and other sized doors that are more likely to be kept longer in stock, should have, if they are stood up, a strip of rosin paper between them, it can be tacked on without injury to each door and thus keep it from the dust as well as the liability of shading. As to the method of piling, I think that for the economy of space, and convenience and ease of handling, the upright method in separate stalls, with the edge facing is the best. The edge of each door should show its size and number of panels, and, if though best, the price may be put on also. In place of thus marking each door, the size and price may be put over each stall. Those who have tried this arrangement of their doors like it the best, and would not return to the old method of laying them flat, or standing them around in various places in the room. And the reason is because every door is in the place where it belongs, and is handy to get at when in a hurry waiting on customers.

### Handling Windows to Prevent Breakage and Damage

In many cases where you are getting in a lot of windows, there will be more orders of them in which the glass has been recently set, and the putty being soft, a hard jar in one way will cause it to become loosened from the glass; then, when it becomes hard, it makes a defective window. To lessen the possibility of this, care should be exercised in handling them from the car in which they are shipped. A bundle of windows should always be handled with the edge of the glass up or down, and should never be laid flatwise when piled in the store room. In loading them onto a farmer's wagon see that the same rule is observed. It not unfrequently happens that when a bundle of light windows is opened one or more of the lights will be found cracked, and it is a question as to whose fault it is. Naturally, the blame is laid on to the shipper, when the fact is, he nor his employees, know anything about it. Sash are glazed and put up in bundles, and when they are delivered to the railroad their responsibility ceases. Do they become cracked in transit? Who can tell. You can't prove it to be the fault of the railroad company; you can't prove it on yourself, nor on the farmer who hauls it out on his job. Now, the fact is, the chances are greatly in favor of the proposition that none of these parties I have named are to blame, and unless there is direct evidence to fasten it on to some one party, our dealer will have to stand the loss as one of the exigencies of the business.

Now, I think I can give a reasonable, and to myself satisfactory explanation of this cracking of lights in a window. I have said before it is usually seen in the larger sized glass and more often in the one-light sash. I have watched the glaziers setting glass in the windows at the factory, and sometimes a light of glass will be, as they say, "out of wind." Now, in setting such a light in the frame it is necessary to spring one corner down to its place, and in so doing, it leaves that particular pane on more or less of a strain, and when it goes into the bundle an extra heavy jar in turning it over will cause it to fracture. So then, when the matter is sifted down to the last analysis, it will be found that the fault lies in the making that one light of glass, and, therefore, it must be classed among those things that are unavoidable. Some dealers have adopted the plan of buying their sash in the "open" and doing their own glazing, then they are sure about the breakage, if any. I am not prepared to say, however, whether this would pay the small dealer or not, but it might be used to figure against the attractive prices of the mail order house that sells mill-work.

### Building Paper and Roofing; Also Coal

Whatever kind of roofing or building paper you handle, put the rolls on end. In the case of roofing, if the rolls are laid on the side there is danger of the material becoming stuck together. This is especially true with the cheaper grades. Their composition being coal tar, the hot weather will cause it to soften and then, whoever has to unroll it has a nasty mess on his hands, in more senses than one. I learned this lesson years ago when tar paper was more commonly used than now. Building paper and roofing should always be kept in a dry place, and away from the extremes of temperature, whether hot or cold, moist or dry. I know but little thought or attention is usually given to the care of this class of stock, but, like everything else, it pays to find out what is best for it and then do accordingly.

The lumber yard that handles coal in connection with other things has to have of necessity a set of scales, and if there is one thing more than another about a yard that is abused and neglected,

it is this expensive and most important tool. When a set of scales has been set up and ready for use, it is presumed to be so near perfect for weighing purposes as is possible, and in this condition it is the test, and silent arbiter between the buyer and the seller, because it has the federal government behind it to make it so. It is subject to wear, however, and gets out of order, and the least deviation from its first perfectness makes it a source of gain or loss to the interested parties, as the case may be. The best scale, therefore, is the cheapest in the long run, though it may cost considerably more at first. Buying a cheap make of scales is on a par with buying a cheap grade of roofing. You have nothing but the frame. What is a house with a poor roof, and what is a coal business with an uncertain set of scales to measure it by?

#### Look After the Scales

One of the first things in the morning should be to examine carefully the scales, and if they are being much used watch them also during the day. Have a plank at each end fixed so that the pit may be examined to see that the bearings are working freely. It won't hurt them to oil them occasionally, either, when by reason of long use they don't work easily. They cannot and don't weigh correctly, and a yard with uncertain scales soon gets a bad name, for it is not laid to the scales, but the honesty of the dealer is questioned, and this is a serious matter, and more costly than a new set of scales. When they have become worn, they should be taken out and sent to a repair shop that does this kind of work, as after they are repaired they have to be made good by an official inspector, just as they had to be when they were first turned out of the shop. If you can prevent it, never let a team of horses be driven faster than a walk over the platform. A farmer usually sets his brake when he drives on. This means nothing unless the horses push in their collars. You can see for yourself, which side this will advantage, and when.

There are divers opinions held by dealers, in the matter of charging a fee for weighing, other than what is a part of their business. It is all a matter of policy, any way, because it needs no argument to prove that the owner of a set of scales is entitled to something more substantial than "good will" for his trouble and investment of capital. But the public seem to want this among the other contributions to secure it. Some one ought to invent a nickle-in-the-slot arrangement to attach to a country wagon scale.

#### In the Rocky Mountain Reserve

During the season of 1912 there have been no dangerous fires within either the Brazeau or Athabaska Forests of the Rocky Mountains forest reserve. There have been a few small fires along the new railways under construction within the Brazeau reserve, caused by negligence on the part of the contractors, but throughout the season the weather conditions have been so favorable that the danger of serious fires was almost negligible.

The Brazeau and Athabaska forests are the two northerly divisions of the large Rocky Mountains forest reserve, and with proposed additions constitute over one-third the total area of the Rocky Mountains forest reserve on the eastern slope of the Rocky Mountains, or about four and a half million acres. The office of the forest supervisor of these reserves is now situated within the Brazeau reserve, at Mile 37 of the Alberta Coal Branch, 46 miles southwest of Edson, the first divisional point on the main line of the Grand Trunk Pacific Railway, 150 miles west of Edmonton. During the season of 1912 there have been fifteen forest rangers in all stationed at different points over the two reserves. This, of course, is a very inadequate force for such a large area.

During the coming winter the officers in charge of the Brazeau and Athabaska divisions of the Rocky Mountains forest reserve propose to make "administrative site" surveys at different points on the reserves. Upon these sites it is proposed to erect ranger and look-out stations which will be no farther apart than one day's trip by pack train, along the primary trail system of the Brazeau reserve. It is the intention to erect, this winter, at least three or four log cabins for the rangers. A telephone system is also being planned whereby these ranger stations will be connected by telephone to the forest supervisor's office. This office is centrally located and telephone lines will run in from all directions, much in the manner of the spokes of a wheel with the central office as the hub.

This region is one of the richest coal regions in Canada and the future development of these coal fields will be amazing. A number of large coal mines are already in operation, and, with the completion of the branches of the Grand Trunk Pacific Railway now under construction, will be shipping thousands of tons daily.

This region has once been forested with very valuable timber, which has largely been destroyed by fires in the past. There is still an abundant supply of mine-prop timber, however, and the whole region is green with young lodgepole pine from ten to thirty years in age. If preserved from fire this will be an invaluable asset to the country, both for economic uses and as protection to the head-waters of all the rivers which rise in the foothills of the eastern slope.

#### A Progressive B. C. Wholesale Firm

The Canada Lumberman takes pleasure in directing the attention of eastern buyers to the large advertisement of the Mainland Lumber & Shingle Company, Dominion Building, Vancouver, B.C., which appears for the first time in this issue. The firm have their own mills and handle the cut of several other first-class plants, hence they are exceptionally well equipped to handle orders for coast lumber and shingles. The "Mainland" Brand XXX 6/2-16-in. clear Red Cedar shingles are in great demand on the prairies and across the line, and are already in high favor with many Ontario dealers. The firm will supply mixed or straight carload lots, and guarantee prompt shipments. Bright, snappy advertising is a feature with this company, and dealers will profit by keeping close tab on their announcements in these columns during the coming year.

#### Will Ship to the Eastern Trade

Elsewhere in this issue will be found the announcement of Timms, Phillips & Company, Limited, Metropolitan Building, Vancouver, a new firm of lumber wholesalers, who start out under bright auspices. Mr. H. Timms was for six years general manager of the Imperial Timber & Trading Company, Limited, Vancouver, and in that capacity has had pleasant business relations with many of our Eastern dealers, who have been impressed with his squareness and fair dealing under all circumstances. Mr. T. N. Phillips was formerly connected with the Rat Portage Lumber Company at Winnipeg and Kenora, and after spending a couple of years in the Vancouver lumber trade joined the staff of the Imperial Company as sales manager. He is a famous hockey star, having played with the Montreal and Ottawa teams before coming west, and was for several years the captain of the victorious Kenora Thistles. Messrs. Timms, Phillips & Company will conduct a general wholesale and export business, and having effected first-class connections they can guarantee the satisfactory filling of all orders for coast products. They will specialize in long fir timbers and high grade red cedar shingles.

#### Timber Measurements by Cord Methods

The Simonds Manufacturing Company have published, for free distribution, a booklet by George Byron Oberton on "Timber Measurements by Cord Methods." This booklet also contains some information on Simonds saws and knives. The Canadian offices of the Simonds Canada Saw Company, Limited, are at Montreal, Vancouver, and St. John, N.B.

#### A New Clyde Catalogue

An attractive catalogue has recently been issued by the Clyde Iron Works, Duluth, Minn. This catalogue is profusely illustrated with photographs of their blocks, sheaves and wire rope. In addition to full particulars as to their products, the catalogue gives some useful information on the weight per cubic foot of substances.

#### Cartage Rate Increase Disallowed

The Railway Commissioners have disallowed the increase of cartage rates on freight proposed by the railway companies to be effective in Eastern Canada. The judgment provides however, that the companies may impose rates not exceeding two and a half cents per hundred pounds and that the minimum toll charged for any complete single shipment shall not exceed fifteen cents. This increases the rate by half a cent per 100 pounds, in place of the one cent per 100 pounds proposed by the railway companies.

A company, under the name of the Abitibi Pulp & Paper Company, Ltd., has been incorporated with a capital of five million dollars (in one hundred dollar shares), to exploit the property recently purchased by Mr. Shirley Ogilvie and Mr. F. H. Anson, of Montreal. Under the charter the company may manufacture, sell, and deal in ground wood and chemical pulp, carry on the business of lumbermen, saw millers, deal in timber limits, and also manufacture lumber.

Messrs. White & Wyckoff, Holyoke, Mass., manufacturers of the famous "Autocrat" brand of writing papers have favored their friends with an excellent calendar, which at the same time, is eminently useful. Each month upon the calendar contains a great deal of information regarding the important days included in it and also information regarding the four quarters of the moon.

Mr. John McKergow, president of the Montreal Lumber Company, is a candidate for the mayoralty of Westmount, P.Q. He is the nominee of the Westmount Municipal Association.

Mr. Rutherford, the retiring mayor, is senior partner in the firm of William Rutherford & Sons Company, Ltd., who have one of the largest lumber businesses in Montreal.

# Machinery and Equipment

What Manufacturers of Logging, Sawmill and Woodworking Appliances are Doing

## A New Canadian Saw Concern

W. E. Radcliff, Toronto

The Radcliff Saw Manufacturing Company, Limited, with factory and head office at 550 Dundas street, Toronto, have been incorporated during the past month with Mr. W. E. Radcliff as president and general manager.

The company have installed a large and up-to-date plant for the manufacture of circular, band, gang and inserted tooth saws. They will also deal in and carry a complete line of mill supplies, including saw mill machinery, belting, emery wheels, files and filing room machinery; in fact everything for the saw and planing mills. They have also secured the special agency for R. Hoe & Company's famous bits and shanks, which are so well known and are in such great demand throughout Canada.

The steel used by the Radcliff Saw Manufacturing Company is made to their own special formula, so that they are in a position to turn out saws and knives of a very superior quality.

Mr. W. E. Radcliff is one of the best known saw men in the Canadian trade. For twenty-three years he had been in the employ of the Henry Disston & Sons, having served his apprenticeship as a saw-maker in their Cincinnati factory, rising steadily in the ranks year by year. In 1903 he was appointed general manager of their Canadian business, a position which he resigned on November 1st, to organize the present business.

Associated with Mr. Radcliff are Mr. J. Kennedy Hill, who will attend to the sales end of the business, and Mr. Robt. E. Martin, who will have charge of the production department.

Mr. J. Kennedy Hill comes to the new company with a wide experience in the saw mill trade, having for the past six years represented the Disston Company in Eastern Canada and, for seventeen years prior to that, been actively identified with the saw mill industry in Quebec Province.

Mr. Robt. E. Martin also has had a thorough practical experience in the saw-making business with which he has been identified for over thirty-five years. For the past twenty-five years he has been superintendent in the Disston factories and for the past four years has been superintendent of the Toronto factories.

The employees of the new company are all skilled workmen in their particular lines, who have had years of experience, and the new concern, launched under such satisfactory conditions, bids fair to secure its full share of the growing Canadian trade.

J. Kennedy Hill, Sales Manager

R. E. Martin, in charge of production

## An Up-to-date Catalogue from a Progressive Firm

One of the most complete works of its kind we have ever seen, affording ample evidence of the progressiveness of the concern from which it emanates, is the General Catalogue No. 1 of the General Supply Company of Canada, Limited, Ottawa, a copy of which we have received.

The lines illustrated and described include power transmission, elevating and conveying machinery, iron and wood working machinery, steam goods and miscellaneous supplies.

The catalogue consists of over 1100 pages printed on coated paper and well bound in cloth cover. Throughout the catalogue the compilers have adhered to standard lists thus enabling purchasers to make an intelligent estimate on the net cost of the material wanted.

The book is not only a catalogue, but a work of information which every mill man and dealer in mill supplies will find of great benefit. With this catalogue in his possession a mill man can find everything he needs to fit up his mill, or woodworking or machine plant from top to bottom.

The General Supply Company, also make a specialty of furnishing all classes of machinery, boilers, engines, steam and power pumps, accessories and supplies for mills, factories, machine shops and con-

Office and Warehouse of the General Supply Company of Canada, Ottawa

tractors, and are sole representatives for the well-known brands of belting "Vi-Balata" and "Dreadnought" which are popular among mill men all over Canada.

The General Supply Company was incorporated in January 1910 and has had a most successful career under the able management of G. B. Greene. In 1910 the present substantial and spacious building in Ottawa was recognized to be an absolute necessity. The building is four storeys high, built entirely of steel encased in concrete and is strictly fireproof. The floors have a carrying capacity of 1600 pounds per square foot and are constructed of reinforced concrete. The roof and foundation are also of the same material. The walls are 18 inches thick and so constructed that at any time four extra storeys may be added without endangering the safety of the building.

The ground floor is used for shipping office, shipping room and for the storage of heavy machinery. A very strong trolley, capable of handling four tons and operated with ease by one man, is erected on this floor and is a great time and labor saver in moving heavy machinery. The front portion of the first floor is entirely taken up with the large general offices, board room, manager's office, drafting room, blue print room and vault, while the rear portion is utilized as a store room. The top floor is used entirely for the storage of the many lines of goods handled by the company.

Besides the head offices at Ottawa, the firm have branch offices and warerooms at Toronto and Winnipeg where full stocks are always kept on hand.

## Reduced Price for a Popular Paint

The Joseph Dixon Crucible Company of Jersey City, N.J., announce that the selling price of their Silica-Graphite "One Quality Only" paint has been reduced. The reduction is made because the decrease in the price of linseed oil which is used as the vehicle, and

they wish to give their customers any benefit possible from reduction in the price of materials. This well-known paint which has been the standard for nearly 50 years with leading railroads and manufacturing plants as a maintenance paint, is an excellent long service protector of all exposed steel and metal surfaces.

### **Reorganization of Gutta Percha & Rubber Manufacturing Company, Toronto, Limited**

A reorganization of the Gutta Percha & Rubber Manufacturing Company of Toronto, Limited, whose factories are located in Toronto (Parkdale), has been reorganized, the change becoming effective on January 1st. The company has carried on an extensive business throughout Canada and by export to various parts of the world for over a quarter of a century, having been incorporated as a purely Canadian industry under the Ontario Joint Stock Company's Act in 1887.

As the business of the company grew, it became necessary to open branches in many places. At some points these branches were operated under the name of "The Gutta Percha & Rubber Mfg. Co. of Toronto, Ltd." but in the prairie provinces the business has been conducted at Winnipeg and Calgary through a subsidiary company, The Winnipeg Rubber Company, Ltd., and in British Columbia through another subsidiary company, the Vancouver Rubber Company, Ltd. The directors and shareholders of the company have now decided that its interests and convenience and the interests and convenience of its customers will be better served by a reorganization which will enable it to operate in all its branches under one name and at the same time adequately care for and develop its very large and constantly increasing business. To this end, application has been made for a Dominion charter under the name of "Gutta Percha & Rubber, Limited," with an authorized capital of \$6,000,000. The new company will be controlled by the same interests and be under the same management as the old. It will acquire all the trade marks, patents, properties and good will of the old company and, as heretofore, will be an entirely independent concern without connection or affiliation with any other company in or out of Canada.

### **Important New Saw Making Company**

The National Saw and Forge Company, Limited, with a capital stock of \$500,000, whose chief place of business will be Ottawa, is being incorporated to carry on the business of manufacturers of and dealers in, all kinds of saws, etc., and to acquire and take over as a going concern, the A. J. Burton Saw Company, of Vancouver and Ottawa. Hon. N. A. Belcourt is financing the new proposition and the directors will include some of the leading manufacturers and business men of Ottawa.

### **Simonds Saw Company's 1913 Calendar**

The Simonds Saw Company, Fitchburg, Mass., and the Simonds Canada Saw Company, Limited, Montreal, Vancouver and St. John, N.B., have favored their friends with a calendar which will attract much attention wherever it is received. The illustration consists of a picture of the well-known Simonds carpenter bending a Simonds band saw and showing by the look of satisfaction upon his jovial face, that he is handling a saw in which he has complete confidence.

### **Many Orders for Grand Rapids Dry Kilns**

The Grand Rapids Veneer Works, Grand Rapids, Mich., have recently closed the following, among other dry kiln contracts: The Canada Lumber Company, Limited, Toronto, Ontario; The Meadow River Lumber Company, Rainelle, W.Va.; Northwestern Cooperage & Lumber Company, Gladstone, Mich.; The Pilliod Lumber Company, Swanton, Ohio; Dickson Planing Mill Company, Dickson, Tenn.

### **Will it Pay to Install Machinery?**

Blaysdell, who used to pride himself somewhat on his ability as a turner, once had as an interested spectator a young man of somewhat rural appearance. As he paused in his work to whet a tool the young man asked: "Does a man have to learn to do that turning, or can any one do it?"

The young man was a trifle verdant, it is true; yet he was not densely ignorant. His attitude toward machine woodwork was not so very different from that of many skilled and well informed mechanics in other lines. Doubtless we of the craft are inclined to be a trifle supersensitive and conceited, as, happily, are men of other crafts; but the fact remains that it takes something of trained skill to operate machinery to the best advantage. One contemplating the installation of a machine plant would do well to take measures to have some such skill and experience at command before investing too far.

In these days of readily available power in small units, and of highly perfected machinery for almost every imaginable purpose,

there are few contractors and builders whom it would not pay to use some motor adjunct to hand labor. While the manufacturer of all staple materials is so specialized as to make it unwise to attempt them in a small way, there are many odd jobs on which power may be profitably employed. Architects are constantly designing details not in any regular line of manufacture, and the best stocked dealers are apt to be short of some small items which are needed in haste. The working up of odds and ends, too, is daily getting to be a matter of more moment; and such things as furring, bridging and the like can often be made out of stuff which would otherwise be waste.

The increasing cost of lumber is constantly leading to the use of thinner stock; and the man who devises a method of making thin lumber serve the purpose of thick will have paid toll on the road to wealth. Most manufacturers cling to the time honored custom of charging the same for thin stock as for inch (they would be fools if they did not cling to it as long as possible); so a resaw may well be profitable in many localities.

Special sizes and styles of brackets, window frames and turned work are but a few of the thousand and one things which would often be made to good advantage in one's own plant. But it is bootless to enumerate, for the needs of one man's business are different from those of another. Whether a machine plant will pay or not is a question which one is competent to decide only for himself, with the general premise that usually it will. It should ever be borne in mind, however, that the chances are all against the beginner in machine operation who enters into direct and equal competition with an established plant employing experienced operators. It being assumed that some sort of a plant will pay, the exact nature and size of it is a matter well worthy of careful consideration and study.

All too many, contemplating such an installation, say: "I know where I can get such and such second hand machinery, 'just as good as new,' for a song." To such be it said, "Don't sing!" If you want machinery, buy new—and buy the best. Second hand machinery is generally sold for a reason; a reason that is overapt to dawn on one after he has bought and run it awhile. Really good second hand machinery doesn't go begging. It is true than one may, profitably, buy second hand machinery from reputable dealers; but such a purchase will generally call for a song with bankable notes.

It is possible that an expert machine operator may tinker up an old machine so that it will do good work for awhile; but far more money is lost than is made in that way. It is at least certain that second hand machinery cannot be up-to-date; and up-to-dateness often counts for as much as the whole cost of a machine.

The first and most essential machines in any woodworking plant will usually be circular rip and cut-off saw benches. These, if only one man is likely to be at machine work at one time, and if room is an item of material consideration, may be advantageously combined. The buzz planer is a machine the value and applicability of which is apt to be under-estimated by one who has never used it; and a band saw is pretty sure to pay its way in any locality. The lathe is generally of value only when there is available a man somewhat specially skilled in its use. An upright boring machine, so set that a large variety of work may be gotten under it, is pretty likely to be found useful; and an emery machine is almost essential for keeping machines and tools in order, as well as for miscellaneous work.

Happily, lightly framed machines, and those with wood tables, have practically disappeared from the market; and caution against them would be superfluous. If any general rule for the purpose of machinery was capable of being formulated, it would probably be to the effect that one should seek weight and stiffness of frame, and should avoid clumsiness of running parts. A dollar "saved" in the purchase of a machine is very apt to be a hundred dollars thrown away. Whether or not it will pay you to put in machinery depends very largely, perhaps altogether, on whether you put in good machinery or poor.—W. D. G. in Woodworkers Review.

The Quebec Government have decided to rename the commission which has been investigating the water powers of the province. It will in future be known as the Quebec Streams Commission, and the authority increased so that it can carry out the work of constructing storage dams on the upper St. Maurice River. The commission is authorized to borrow a million and a half for the work, but all plans and contracts are to be submitted to the government. The commission can purchase or expropriate present power dams. The revenues received from the water powers will go into the sinking fund for the loans.

The exceptionally wet season on the Upper St. John River has caused many of the men employed in the lumber camps to leave, because the operators were unable to get supplies into their camps. A number of reports have been received stating that portaging has been carried on only with the greatest difficulty. There is some consolation for the lumber manufacturer, however, in the fact that the markets are improving.

# WANTED & FOR SALE DEPARTMENT

## PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (\$2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

## WANTED—LUMBER, ETC.

### Wanted

1,000 cars ordinary Sawmill Sawdust. Will accept now or later. State what you have. Box 639, Canada Lumberman, Toronto, Ont. 22-1-68

### Pine and Spruce

Wanted for next year's delivery cars, or cargoes No. 1 Pine Culls, also Spruce. Apply Box 671, Canada Lumberman, Toronto, Ont. 1-2

### Wanted

A large quantity of good hard maple billets, 2½-in. and 2¾-in. square, 48-in., 54-in., 60-in. 66-in. and 72-in. long. J. H. Still Mfg. Co., Ltd., St. Thomas, Ont. 1-2

### Box Factory Lumber

When you have any box lumber to offer, write us, giving quantity, description and price Chicago, delivered either water or rail. Chicago Mill and Lumber Company, Chicago. 1-4

### Birch Squares Wanted

We wish a carload of Birch Squares, 2-in. x 2-in. x 22½-in. straight clear stock. Quote price per 1,000 delivered here. Thomas Organ & Piano Company, Woodstock, Ont. 1

### Wanted

1½-in. x 1½-in. x 4½-ft. S. G. White Ash. 1¾-in. x 1¾-in. x 4½-ft. S. G. White Ash. 1½-in. x 1½-in. x 43-in. Ash, Maple or Birch. 1¼-in. x 1¼-in. x 43-in. Ash, Maple or Birch. Quote price, F.O.B. Leamington. Erie Basket Co., Ltd., Leamington, Ont. 1

### Birch Logs Wanted

Wanted about 500 logs, Prime Quebec Birch, 18 inches and up. Quote F.O.B. Box 711, c/o Goulds Advt. Offices, 54 New Oxford Street, London, England. 23-2-82

### Wanted

One million feet 4 x 4 to 8 x 8 Maple, Beech, Birch or Elm Squares. Will accept hearts of knotty stock, for rough work. Delivery now or during 1913. Box 638, Canada Lumberman, Toronto, Ont. 22-1-67

We use yearly five hundred thousand to one million feet of Birch, Basswood and Ash in our business and are open to contract with responsible mill men for same. We would be willing to advance money on the logs and also on lumber as sawn. Write us, Manufacturer, Box 619, Canada Lumberman, Toronto, Ont. 20-37 T.F.

### Birch Wanted

Want 200 M. ft. 10/4 1st and 2nds and No. 1 Common Birch. Give average widths and lengths and percentage of 14 and 16 ft. lengths. Want price delivered Philadelphia, Pa. and New York City.

Want 200 M. ft. 6/4 No. 1 Common Birch delivered Boston, Mass.

Want 5 cars 4½ in. and 5 in. 1sts and 2nds. Birch delivered New York City and Philadelphia, Pa. Reply Box 526 Canada Lumberman, Toronto, Ont. 14 T.F.

### Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Box Co., Ltd., Toronto, Ont. 7-tf

### White Pine Wanted

The Advertiser would buy Fifty Thousand or more White Pine Logs. This season's cutting. Ottawa Valley preferred. Box 664, Canada Lumberman, Toronto, Ont. 24-1

### Lumber Wanted

Four, five and six quarter, Spruce, Hemlock and Norway, four, six, eight and ten inches wide, rough, also surfaced. White Pine Mill Culls and Lath. Box 615, Canada Lumberman & Woodworker, Toronto, Ont. 20-1-34

### Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

### Hardwood Pickets Wanted

Beech, Birch and Hard Maple.  
1 x 1 x 42.  
1 x 1 x 48.  
1 x 1½ x 42.  
1 x 1½ x 48.  
1 x 1¾ x 42.  
1 x 1¾ x 48.  
Require Thickness, 1/16-in. Plump. Quality—Free from all defects. Can take delivery of green or dry stock. Apply to The Canada Wood Specialty Co., Ltd., Orillia, for full particulars, price, etc. 24-1-TF

## Logs Wanted

Reliable Canadian firm wanted to stock Western Ontario mill. Any kind of logs will be accepted on basis of sawing by the thousand. Will also buy several thousand feet of logs on cars. Good shipping facilities on Grand Trunk. Box 662, Canada Lumberman, Toronto, Ont. 24-3-9

## FOR SALE—LUMBER, ETC.

### For Sale

Two cars of small cedar posts. Two cars of heading (basswood, elm and ash). We want to move this stock at once. John Carew Lumber Company, Lindsay, Ont. 24-1-7

### For Sale

About 23,000 ft. of Oak Corbels, 6-in. x 10-in., 8-in. x 14-in. and 8-in. x 16-in., 12/16 ft. long; square edge and sound timbers. Massey Harris Company, Limited, Toronto, Ont. 1-6

### For Sale

Two hundred thousand feet of Yellow Birch, 6/4 and 8/4, 5-in. wide and up, 10 feet long and up. Delivery to commence in January. Boston rate of freight 14c. per hundred lbs. John S. Eagles & Co., 39 Canterbury Street, St. John, N.B. 1-2

### Lumber For Sale

400,000 ft. 3 x 7 and up Merchantable White Pine.  
200,000 ft. 2 in. Merchantable White Pine.  
200,000 ft. 1½ in. Basswood, Log Run.  
500,000 ft. Hard Maple, 1 in. to 4 in.

Apply to

GEO. C. GOODFELLOW,  
Montreal, Que.

### For Sale

125,000 ft. 1-in. M.R. Maple; 25,000 ft. 1-in. M.R. Beech; 10,000 ft. 1-in. M.R. Oak; 35,000 ft. 1-in. M.R. Pine and 300,000 pcs. 1½ x 48-in. No. 1 Spruce Lath. The Rathbun Co., Deseronto, Ont. 1-3

### For Sale

200 M. ft. Hemlock. Can be cut to order. Several cars telephone poles; also square Birch, Beech, Maple and Elm from 3 x 4 to 10 x 10, 10 to 16 ft. long or longer. 4 ft. slab wood and sawdust. Hall Bros., manufacturers and wholesalers, 174 Mutual street, Toronto, Ont. 24-98 t.f.

### For Sale

500,000 ft. Maple squares, 1¼-in., 1½-in., 1¾-in., 2-in., 2¼-in. and 2½-in. Any length from 12-in. up.  
Car lots and upwards.  
M. Mitchell, P. O. Box 204, Lucknow, Ont. 23-2-79

### FOR SALE—BAY POPLAR

At our Ayden Mill, freight rate to  
Norfolk, Va. 8c  
Baltimore 15c  
Philadelphia 16c  
New York City 20c  
Boston 23c

We offer 400 M feet 1 x 6 in. and wider bay poplar, thoroughly bone dry and straight, good widths and lengths, beautiful stock, piled for 1st and 2nds, but will likely down grade in shipping about 20 per cent. No. 1 common. This stock is cut heavy and most of it would dress two sides 1 in. thick. For quick shipment will quote special prices.

AMERICAN LUMBER & MFG. CO.,  
24-3-99 Pittsburgh, Pa.

## FOR SALE—MACHINERY, ETC.

### For Sale

A 35-inch Leffel waterwheel, or will exchange for a two-saw edger in good order. A. Dawson, Chesley, Ont. 24-1-8

### For Sale

Good boiler, 72 inches by 14 feet, 72 4-in. tubes, 75 h.p. engine. All in good condition and ready for immediate shipment. Will accept lumber in exchange. Apply to Box 657, Canada Lumberman, Toronto, Ont. 24-3-3

### For Sale

One fore and aft, compound, direct acting, surface condensing Marine Engine. High pressure cylinder, 14¼-in. diam. Low pressure cylinder, 26-in. diam. Stroke 18 inches, with condenser attached. In first class order. Apply Saint John Iron Works, Limited, St. John, N.B. 1-6

### Saw Mill For Sale

Huntsville Lumber Company, Limited, will in the future only run one of their two double cutting Band Mills, which is now cutting fifty thousand feet per day.

They will sell the same with engine, boilers and all other machinery along with building. Also will sell blacksmith's tools and a number of saw-log sleighs and chains.

Huntsville Lumber Company, Ltd.,  
22-42 T.F. Huntsville, Ont.

## WANTED—EMPLOYMENT

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

WANTED—By practical experienced man, position as manager of lumber or pulp operations. Can handle any kind of proposition from stump to market, including financing. Highest references. Bond if required. Reply Box 663, Canada Lumberman, Toronto, Ont. 24-2

Position wanted as shipper or travelling salesman, by young man with seven years' experience. Age 27. Good references. Strictly sober. Apply to Box 668, Canada Lumberman, Toronto, Ont. 1

## WANTED—EMPLOYEES

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents

A Band Resaw Filer, yearly position. Reply Edouard Ruel, Lauzon Levis, Que. 1-3

Experienced mill managers looking for positions are requested to read the announcement under Box 676, on page 53. 1-3

Wanted immediately, competent hardwood lumber scaler. Dominion Mahogany & Veneer Co., Limited, Montreal West, Que. 24-1-97

WANTED—Lumber salesman with knowledge of grades in pine and hemlock. Young man with some selling experience preferred. State salary and experience. Box 669, Canada Lumberman, Toronto, Ont. 1

## BUSINESS OPPORTUNITIES

### For Sale

Three townships heavy timber. New gang and band mill. Best proposition on the north shore of Lake Huron. Apply Box 672, Canada Lumberman, Toronto, Ont. 1-2

### For Sale

Sawmill, in good condition, on Burford Lake, six miles from Wiarton, equipped with 115 h.p. boiler, 100 h.p. engine, new carriage by Long Bros., Orillia, Ont., good trimmers and endless chain attachment for hauling logs out of water.

Terms, etc., apply Massey-Harris Company, Toronto. 4-T.F.

## FOR SALE

Water Powers, Saw Mill, Farm and Timber Land, situated at Fallbrook, Lanark County, comprising:

No. 1.—Sawmill, and dam, twelve-foot head, driven by one 35-in. Samson and one 35-in. Leffel Water Wheels, and containing one Circular, Watrous 3-block Steel Carriage, Trimmer, slab saw, double edger, and complete shingle mill, planer and matcher, all in A.L. repair.

Lumber is sawn and piled in yard for less than one dollar per M. feet, deducting worth of slabs at mill. Average season's cut 500 M. feet. This season's cut over 600 M. feet, of which about 500 M. is still in yard. Large local trade and balance shipped from Perth, C. P. Ry., costing 90 cents per M. feet to deliver. No opposition on river in buying logs, which are driven to mill at a cost of one cent each, and can be bought in quantities sufficient to keep the mill going for years, at the following price, viz., \$8.00 per M. feet for Ash, Bass, Elm, and \$7.50 per M. feet for Spruce, Hemlock and Balsam.

No. 2.—150 acres deeded timber land, one-half to two miles off lake and can be logged very cheaply.

No. 3.—Dam and water power, at foot of Bennetts Lake, one mile from mill, 8-foot head, controlling the waters of Bennetts and Fagans lakes, with frame house and one acre of land. Also dam privilege and one acre of land foot of Sharbot Lake headwaters, of Fall River.

No. 4.—270 acre Farm, with stone dwelling, 30 x 44, 10 ft. ceilings, furnace, cistern, etc. (a lovely home) large Barn, Stables, Byres Silo, Drive Barn and Flour and Feed Store.

No. 5.—Frame house, 28 x 32, with stable and henery. All unencumbered. Wish to retire from active business. Will accept \$12,000, half cash, balance arranged for all including sleighs, mill, wagons, boom chains, booms and other equipments as a going concern.

Fallbrook is 10 miles from Perth and the C. P. Ry. on the Lanark Co. Good Roads System, has daily mail, telephone, 2 stores, cheese factory, blacksmith shop, and the best rural school in the County, employing two teachers. This property is a money-maker, and everything as advertised is open for the closest inspection, including books. For further particulars, address A. B. Lees, Fallbrook, Ont. 24-1-5

**For Sale**

Saw Mill and fifty-three miles timber limits in County of Bonaventure, Quebec Province. For further particulars apply to J. D. Sowerby & Co., Oak Bay Mills, P.Q. 22-71tf

**For Sale**

Timber limit, containing 20,000,000 feet mixed timber. Latest improved saw mill, new; capacity 30,000 feet lumber in 10 hours, logging this winter 2,000,000 feet. Apply Geo. S. Nesbitt, Rupert, Que. 24-2-2

**Timber Limits For Sale**

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest, if your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. tf.

**For Sale**

Established Lumber Business, with first-class mill, now running full time. Timber limits with 20 to 30 million feet of standing pine timber conveniently located, and all merchandise, etc. Price \$55,000. This is worthy of investigation. Address Box 332, Canada Lumberman, Toronto, Ont. 19-22-t.f.

**For Sale**

Established lumber business with first class sawmill, extensive planing mill, a sash and door factory, a flour mill, all modern machinery and equipment. Good timber limits; cedar, pine, spruce, birch, maple, etc. Good roads. Mills conveniently located, near railroad and wharf. First-class water power. Address James Roy, St. Ulric Riviere-Blanche, Ce Matane, Que. 1-3

Owing to the considerable tension of the saw blades on the wheels the wear on the wheel faces is often considerable, and to secure good work and an even bedding for the saw they should be ground to a dead true surface periodically, say, not less than once a year, says the London Timber Trades Journal. The consensus of opinion is now in favor of a perfectly flat wheel face, and this should be obtained by grinding the wheels mounted on their own spindles till they have both a perfect running and standing balance. The greatest amount of wear will usually be found near the tooth edges of the wheels, where there is a greater accumulation of dust and an increased driving strain on the blade. Should the front edges of the wheels be allowed to wear the strain on the blade is thrown towards its back, and the teeth edge of the saw, being slack, will be liable to "snake" and cut untrue, and at the same time twists and cracks in the blade may be set up. We are afraid the periodical truing up of saw wheels is sometimes neglected, and the saws are wrongly blamed for turning out bad work.

There are two systems in general use for grinding up band wheels—viz., an ordinary grinding lathe equipped with an emery wheel or a separate portable grinding machine in which the emery wheel is feathered on a spindle and driven by the frictional contact of the emery wheel with the band wheel face which is set in motion. The latter plan is the simplest and cheapest, and if the girder is subsequently made and applied it is quite effective. In addition to the emery wheel the grinder should be fitted with a turning tool attachment, as, should the band wheels be much out of true, good deal of time may

be saved by taking a light preliminary cut with the turning tool, the wheel face being afterwards finished by the emery wheel. The grinding machine should be of very substantial construction, and provided with a single lateral feed and two independent direct feeds, one for the emery wheel and one for the turning tool, so that they may be used independently or together if desired.

The struggle for existence is more strongly emphasized in the tree world than in the world of humanity. Poverty of soil, burdensome snows, cold and the violence of the winds are the discouragements which the forests of subarctic regions have to meet. In this connection there may be cited the observations made by Townsend along the north shore of the Gulf of St. Lawrence.

A little larch that had successfully risen to the height of nine inches in a gully he found, on sectioning it and counting the rings with a pocket lens, to be 32 years old. The trunk was three-eighths of an inch in diameter.

A balsam fir with a spread of branches of twenty-seven inches, whose topmost twig was thirteen inches from the ground, showed fifty-four rings in a trunk two inches in diameter. Another balsam fir nine inches high and twenty-one rings in extent, showed thirty-five rings in a trunk one inch and a quarter in diameter.

A black spruce eleven inches tall and twenty-two in extent, with a trunk only one inch in diameter, had lived over half a century, showing fifty-two rings in its cross-section. A black spruce six inches high with a trunk of one and one-half inches in diameter was fifty-three years old. Another black spruce was sixty-two years old.

Larches are common enough, but the expert must look carefully in order to pick up a little tree with a trunk one-eighth of an inch thick, a height of one and one-half inches and a spread of branches two inches across. Yet this was not a seedling, for it was 16 years old, as was shown under a powerful microscope. Such a tree might be plucked and put in one's vest pocket.

A larch that grew on the wind-swept islands of Quatatachoo was twenty inches tall and forty-five in extent with a trunk one and one-half inches in diameter, had haken twenty years to grow. Another larch exposed to the winds of Esquimaux Island for 110 years had attained a height of three feet, a spread of eleven feet and trunk some two inches in diameter.

## Steam Logging Engine, by Alex. Dunbar & Sons

### Denaston Breakey

Breakeyville, P. Q.

## Good Opportunity for Progressive Canadian

Capable mill manager wanted to take charge of a large timber limit and manufacturing establishment in Quebec Province.

The owners of this limit intend manufacturing lumber and sulphite pulp on a large scale, and require the services of a high-class capable Canadian who thoroughly understands all departments of a sawmill business, viz., the woods, labor, manufacturing and shipping.

Splendid opportunity for a good man. All applications treated confidentially.

Apply, giving full particulars regarding experience, to Box 676, CANADA LUMBERMAN AND WOODWORKER, Toronto.

### Talks From a Wholesaler

Those who work with their "nose to the grindstone" have only a narrow and one-sided view of their own particular business. They can not see our faults as others see them and therefore are not in position to remedy them. The writer is a wholesaler and he therefore has a one-sided view of his own work; no doubt a millman could give him pointers on how to run his business. In this instance, however, the writer will try to show a few of the weak points in the millman's business.

The trend seems toward specialties—one man specializes in advertising, another in a branch of engineering, another in selling, another in specialty-manufacturing, and so on. And so it should be in the different branches of each business. Wholesalers are sales-specialists; they have a source of supply, are not worried with manufacturing conditions and therefore bend their entire energies in sales-methods. On the other hand, the manufacturers of lumber are (or should be) specialists in manufacturing and should devote all their time to that branch of the business, unless they maintain an entirely separate selling organization for that purpose, in charge of a competent sales-specialist. This article is not directed at the latter.

The minute a manufacturer tries to run a mill, with all the worries of logging, sawing, piling, breakdowns, floods, etc., and then attempts to market his lumber to the consumers with the kicks, bad accounts, credits, etc., some branch of his business—and sometimes the entire business—is going to suffer. He can't do these two things and do both of them well. Another thing, his selling costs are much higher and he stands a great chance of getting a lot of long-winded consuming accounts for the reason that he hasn't the time to watch them. Furthermore, the average millman needs ready cash and about two-thirds of the consumers give notes. Millmen, in general, do not have very good banking facilities, and if they do not accommodate their customers they can not (as a general rule) expect to hold their trade.

It is just as bad for a wholesaler to attempt to run a mill and continue to sell his lumber. The wholesaler does not understand the details of manufacturing or lumbering, and has only a very vague notion of mill costs. A recent failure of an eastern wholesale house brought to light some very good figures to illustrate and sustain this statement. As long as it did a strictly wholesale business and knew its costs, etc., it made money. But when it started one or two mill propositions in different sections of the country it lost money steadily. Even if it had succeeded in establishing an equitable basis of mill costs at its first operation, a mill started in another section would reveal an entirely different set of costs. Yet some people figure one operation the same as another, regardless of locations. These mill worries affected the sales organization finally and the company failed for a large amount.

Manufacturers will probably laugh at the statement that they make less money in selling direct to the consumer than by selling to the wholesalers. The manufacturers selling direct to the consumers must maintain a sales-department. This will cost from \$6,000 a year up, depending on the volume of business transacted. Besides this there are accounts to be carried, traveling expenses, extra office help and other items. The little extra they get per thousand in selling to consumers is more than eaten up in increased expense. If, however, they sell through wholesalers they put out a stock-sheet and prices once a month, attend to a few letters each day from the wholesalers and their work is practically done—as far as selling goes. Then they can devote their time to the manufacturing end and toward making their products better as well as improving their methods, etc. They have practically no selling worries, get cash for their lumber, and the wholesaler will generally make cash advances if they are hard up. Furthermore, they can sleep nights.

Some millmen will probably get the idea that this article is written to show the wholesaler in the most favorable light. Such is not the case; the writer believes that, generally speaking, the logical trade-channel is manufacturer to wholesaler to consumer, and the reasons are given herein.

There is one way the manufacturer can increase his business with his wholesaler. When he sends out a stock-sheet, room should be left for a description of each item. By description is meant the widths and the average width; per cent. of 14 ft. and 16 ft.; the dryness; f.o.b. price and rate. That saves time otherwise wasted in correspondence getting this information. Furthermore, when the wholesaler's customers ask him for a description he can give all the information and there is no misrepresentation. Nine times out of ten a deal can be closed when specific facts are given, and the tenth chance is only for the man who says "usual run of stock." This is a mighty good point and already a few progressive millmen are taking the time to get the descriptions because it means more business and a faster movement of the stock. You wouldn't buy a car of logs at a price without knowing all about them, would you?

Mr. Millman, if you don't keep all your lumber moving you're

losing money. Right now, down in some corner of your yard, there are some items you haven't had a call for and consequently they have lain there a long time. Every day, in some way or other, they are costing you money, but in the end you will probably close them out at a sacrifice. Yet someone is looking for just these items. Want to clean them up? Just take the time, go and get up a good description—specific description (widths, lengths, dryness, per cent. of cutting, price and anything else that is a selling-point)—then send out a letter to each of your customers giving all the information. That's the way to move "slow-sellers." To illustrate an actual case: A wholesale concern in Cincinnati had the output of a mill in Kentucky and had on hand nearly a half-million feet of 1 in. x 5 in. poplar bevel-siding. It seems that this particular size is a slow-mover and this accumulation lay around for over a year. Then the concern got up a specific description and put out nearly a thousand letters to wholesalers in the Middle West and also the eastern states. When the returns were all in it found that it had sold the stock almost twice over so that it had to make more of this size. The concern made money on the stock, moved it, and gained some new trade. The same thing can be done with the wholesale trade.

Millmen without a separate and modern sales department can not keep in proper touch with either the specific requirements or the line of credit that should be extended to consumers. A recent failure in the East proved that. Very few local wholesalers were in this failure; those that were, sustained but small losses. The large creditors were mill operators in far off places. Had the millmen been closely in touch with this concern and knew its methods and practices they would never have extended it any credit.

The refused car that causes the millman so much trouble probably proves the wholesaler's position better than anything else. The minute a mill has a car turned down the first move is to wire the best wholesaler in that market to take care of it. And the result—the wholesaler has had no interest in the car; so he takes his time, sells the car so as to make a nice profit, and the mill has to stand all the costs, etc. With this experience you would think the millmen had had enough. Probably he would not sell that particular consumer again and might even write him a letter to that effect. But the wholesaler on the ground is selling him all the time, because he knows how to handle him. The consumer has the far-off mill at his mercy if he is a sharp bargainer, but he can't play tricks on the wholesaler, for that gentleman is within too easy reach. The consumer is also aware that the legitimate wholesaler knows lumber pretty well and can not be fooled.

A certain mill decides to make a break from the wholesalers and sell direct, so he puts an ad. for salesmen in the classified columns of some lumber paper asking for references, etc. Naturally a salesman would not send any detrimental references—therefore the mill gets a few good ones in the reply. Outside of honesty and integrity, what is received? The vital question is, how does the salesman stand with the trade, and can he sell? Yet a mill will engage a man and wonder why he doesn't get business. Where there is an evil there is generally a remedy, and here's one to fit this case. Get the salesman to tell you exactly what class of trade he calls on in what states and cities. Then make up a list of that trade and write a letter to the principal concerns saying that Mr. So-and-so has applied to represent the mill in that territory and you understand that he is held in good esteem by the trade; that the idea in writing them was to get their ideas about the man, his ability as a salesman, if he knows what he was talking about, etc. Then enclose a stamped envelope for reply. When the returns come in it would not be hard to judge what sort of a man you are engaging. This method also puts the mill's name before the customers and links the salesman's name with it—not a bad idea, especially if the man is to represent it. If the salesman proves all right, then is the time to call him down to the mill and educate him to the mill's products, grades, etc. Yet how few mills would ever think of this method. When they do there will not be a lot of incompetent salesmen tearing around the country offering stock at ridiculous prices and misrepresenting it.

The writer is judging the foregoing from a legitimate wholesaler's standpoint. Perhaps some millman could equally well pick flaws in the wholesaler's methods. We learn by our mistakes and by an outsider's criticism. Isn't that right?—Hardwood Record.

On Sunday night, December 22nd, four men were killed, and several others had narrow escapes, in an explosion at the sulphite mill of the Laurentide Company, Limited, Grand'Mere, P.Q. One of the digesters blew up. According to an official statement the paper mills and board mills were not damaged in any manner and would run as usual. The sulphite mill would be shut down for a short time, but should be in a position to resume operations in a week or ten days.

Mr. W. T. Eagen, the well-known Toronto wholesale lumber man, who has been seriously ill during the past few weeks, is, we are glad to learn, convalescing, and will be at his office again in a few days.

# Review of Current Trade Conditions

## Ontario

The holiday season being still with us, there is very little fresh news to report since our last issue. The situation has improved considerably the last couple of weeks so far as the labor question is concerned, and men can now be hired without any trouble. There has, however, been very little snow in northern Ontario and the difficulty in hauling is liable to be somewhat acute unless a good fall of snow arrives before very long.

There is not much doubt that there will be a considerable shortage of all kinds of lumber during 1913. This is due largely to the unprecedented demand during 1912 and the consequent short stocks which the manufacturers are holding, and partly to the cut during the past season being very much smaller than usual owing to a number of mills not having been in operation. Hemlock and spruce will likely be the most scarce and pine will be largely used as a substitute for these and thus considerable impetus will be given to the middle grades of pine.

Hardwood prices remain unchanged and very firm and indications point to a good demand for all kinds of hardwoods for the coming season.

## Eastern Canada

The white pine trade still remains normal with a very little change in prices. Standard saps 4/4 are in good demand at \$50. Prices on 1x8 and 1 x 10 are \$39 and \$41 respectively. There has not been very much business done in spruce, prices remaining about the same. Stocks are still uncertain and buyers are practically only ordering for their immediate requirements. Spruce lath 1 5/8-in. is being offered at \$4.50 with a fair amount of sales, but this is chiefly for requirements of the movement. It is expected that lower prices will prevail when the winter cut begins to arrive. Maple flooring has had quite a run recently, chiefly owing to the scarcity of hard pine and the difficulty experienced in shipping the orders already on hand at the mills.

Trade has slackened up somewhat in New York in spruce, but prices continue high, as a very low production has been reported. Plain and quartered oak are apparently sold ahead for some considerable period. There is a strong market in ash, maple and birch.

## Great Britain

The London trade is unusually busy for this season of the year, which is a very welcome fact in view of so much time having been wasted earlier in the year. Although the weather is still open, a cold spell may arrive at any moment, which would have a material effect on the market, as it would prevent the arrival of any considerable stocks. This possibility has evidently been taken into account as prices remain particularly steady with, if anything, an upward tendency. The deliveries at the London docks for the week ending December 7th reached a total of 8,862 standards, as against 4,695 for the same period of 1911.

At Liverpool, also, trade has kept up rather better than usual, although buyers, as usual, are rather wary at this time of the year of purchasing any more than their immediate needs or to complete some stock sizes they may happen to be short of. Business is not likely to show much improvement until after stock-taking is finished. Owing to the extreme difficulty in getting tonnage, the spruce deal market has more than held the firm position of the last week or so. The market for birch planks from New Brunswick is stronger owing to the increased demand. Shippers are asking £9 12s 6d to £9 15s for ordinary run, and £10 10s for next season's delivery at Bristol Channel ports. It is difficult to induce shippers to make contracts for future delivery in pitch pine in the present high position of the market. The majority of the recent importations have been taken away direct from the docks and the remainder have helped to slightly increase the very short stocks which were on hand. Business has improved in the hardwood market, more contracts for forward delivery having been signed up and the number of orders is well above the average for this time of the year.

Business has been a little quiet at Manchester lately as the building trades have been somewhat slack, but there are signs of considerable activity in the near future. Owing to the large advance in the price of spruce and similar timber, contractors who supply lapboards and similar materials to finishing concerns have given notice of a considerable rise at an early date. Although prices have changed very little for spruce, the numerous enquiries which are coming in are causing speculation as to where the supply is to come from.

The recent market improvement at Glasgow has been fully maintained and business is on a considerably higher scale than is usual at this time of the year. Very little stock is being stored, the majority

being sold immediately on arrival. There is practically no pine or spruce on the market and no further supplies can be expected until the re-opening of the St. Lawrence.

The recent arrivals of pine of the lower grades were all disposed of at the ship's side for several pence higher than could have been obtained seven or eight weeks ago.

## United States

Chicago.—In spite of the holiday season, trade in pine has remained very good. Some box manufacturers, however, report that there is not quite such a demand for their products as there was a month to six weeks ago. There is quite an exceptional demand for cedar for telegraph and telephone poles, but considerable difficulty is experienced in obtaining suitable labor. Owing to the extra cost of production a considerable rise in prices may be expected for cedar posts. There is no diminution in the demand for hardwoods, and the high prices are stimulating manufacturers to do their utmost in forcing production to the limit. Plain sawed oak is in exceptional demand, and there has been such a market for this that the wholesalers have had no opportunity to lay up stock. Unless there is a big falling off in the demand it will be a considerable time before a normal supply can be expected. A fair business is being done in spruce and cedar.

Buffalo.—Business in white pine is brisker than is usual at this period of the year and winter business is expected to be quite up to the average in spite of the fact that building operations have fallen off considerably. The situation has improved considerably in regard to spruce. A better supply of the various grades can be obtained although the prices still remain firm. The trade is falling off considerably in hardwoods, but plain oak continues in good demand. Hemlock orders are coming in steadily and show a considerable increase over the similar period for last year.

North Tonawanda.—An unusually brisk demand is experienced for northern pine and heavy shipments are being made. Eastern spruce is also particularly active, and where desirable quantities can be obtained, there is not much haggling as to prices. The market in hemlock is still remarkably brisk.

## Eastern Canada Power and Pulp Co. in Liquidation

A winding up order having been made by the Superior Court, Murray Bay, P.Q., in connection with the East Canada Power and Pulp Co. Ltd., Murray Bay, P.Q. The company failed to meet its bond interest due in September, and an action was started on the first of December in behalf of the bondholders. The capital is \$1,500,000 in capital stock and \$1,500,000 in six per cent. bonds. The company have a big plant at Navin's Falls, on the Malbaie River, near Murray Bay, the mill buildings consisting of wet machine room, generator room, wood preparing room, pump house, grinder room, wheel pit, block bin, engine room and boiler house. The cutting up mill is on the west side of the dam, the wood being conveyed across a steel bridge and a cedar trestle to the mill. The mill has a capacity of 120 tons of pulp per day. Production was started in the early summer, and the pulp was stated by the officials of the company to be of excellent quality. It was reported that there were difficulties in connection with the water power, but it was said these were surmounted. According to the officials, over 12,000 cords of wood were in store, and contracts for big supplies had been made with jobbers. The company possesses 392 square miles of timber limits.

The first annual statement of the company under date of March 1st last showed the total liabilities to be \$3,185,057 of which \$3,000,000 were capital stock and bonds. The current liabilities included accounts payable \$73,664; bills payable, \$30,662; accrued wages, \$4,778; bond interest outstanding, \$652; bond interest accrued on \$1,500,000 for four months at 6 per cent., \$30,000; bank loan, \$45,299, making a total of \$185,057 current liabilities.

Assets of the company totalled \$3,271,439, including \$3,002,751 for timber limits, river improvements, etc., and stock and bonds in other companies \$78,053, making a total of \$3,080,804. In current assets totalling \$190,634 were included bills receivable, \$35,096; cash, \$85,013; stock, logs and pulpwood, \$66,228. The profit and loss account showed a surplus of \$86,382, made from operations on lumber.

Difficulties with the water supply greatly handicapped the operations, and it was found to be practically impossible to turn out the 120 tons a day with the supply that was available. This shortage in the estimated output was a very serious matter, as it involved the loss of profits which had been anticipated. The capitalization of the company being large, it required a substantial output in order to meet the bond interest.

A Winter Scene at our Mills in Sarnia.

SPECIAL REPORTS  
ON CONDITIONS AT  
HOME AND ABROAD

## Seasonable Trade Conditions at Montreal

Montreal, Dec. 23rd.; (Special correspondence of the Canada Lumberman):—The year 1912 was a very busy period for the lumber trade, not only in Montreal but in the neighboring cities and towns. The boom in building helped greatly but lumbermen also benefited from the general prosperity of the Dominion. The great drawback was the exceedingly poor service of cars right through the twelve months. This delayed shipments and tied up the mills from time to time. At various periods the railways put embargoes on certain points, and the C. P. R. has only just lifted the embargo on Mile End, which has been in force for some time. Certain stocks have been scarce, and firms state that it is now practically impossible to obtain some lines.

Retailers report that, for the season, business is very good, and wholesale houses also state that they are doing a satisfactory trade.

1912 was also a good year for the pulp and paper trades. In ground wood, the fly in the ointment has been the failure of the United States to buy to any considerable extent, it being estimated that 100,000 tons less than in the previous season have gone from here to the United States. Heavy rainfalls have kept power streams across the border at their full height throughout the entire year; the streams are even now at full height. Although new production of 120,000 tons came into the market at various points, and shipments to the United States were smaller, stocks here are not excessive for this time of year, and it is expected that these will be largely absorbed by shipments in the spring. It is known that at the coast mills and in Newfoundland there is no pulp available, and that English interests attempted to purchase supplies for which they could get no ships before navigation closed.

Chemical pulp is stronger than ever. All the mills in the United States have sold their output for 1913, and this remark also applies to European mills. There will probably be odd lots available, but mid-winter will see a considerable shortage in the supply of sulphite, which cannot be remedied until June, after the opening of the Baltic navigation.

News print seems to be in a fairly good condition, but if any more mills are projected, there may be danger of over-production. On this subject, a well-known authority points out that capitalists, who have no knowledge of market conditions, should look carefully into the question of where and at what prices news can be marketed, before embarking on the construction of news mills simply because they own spruce lands and water powers. Capitalists should obtain information from practical sources, and not rely on glowing statements of mills long in existence and on reports of engineering promoters.

## Mild Weather Makes Good Lumber Trade

Ottawa, Dec. 24, (Special correspondence of the Canada Lumberman):—An exceptionally open winter so far is probably the chief reason for the lumber trade in Ottawa and district being so remarkably busy. Buildings are being erected all over the city, consequently making work for both the dealers and workers in wood. A canvas made by your correspondent of the leading lumbermen elicits the information that they do not remember trade being so good for the winter season.

McAuliffe and Davis have just closed a contract for 1,500,000 feet of spruce to be delivered in the spring. The price is ten per cent. in advance over last year and about a similar advance will be made on all this season's cut.

A fair-estimate of how busy the retail trade is here may be judged by what the firm of the Estate of James Davidson say. They have now two hundred men in their shops, an increase of twenty compared with this time last year. Heretofore it has been the custom to close down for ten days, at least on Christmas eve, to allow of repairs being made to the machinery, etc. This year, owing to every department being so busy, it will be impossible to close down until December 31st and then only for five days, to allow some essentially necessary repairs to be rushed.

An extension of 65 x 25 feet has just been completed to the box department and a 50 x 75 extension to the cabinet shop. In the former a new swing store has been installed and in the latter, which will be used principally for a cutting room and for storing kiln dried stock, two rib saws, two swing saws and a buzz planer have been put in. The total cost of these extensions and new machinery cost about \$5,000.

The village of Davidson, Que., was established by the late James Davidson, when he put in a sawmill there. His successors have just built a good sized school house sufficiently large to accommodate fifty

scholars comfortably. This new schoolhouse will save the children of the employees at the Davidson mill from going about three miles to school over a road that was hardly orthodox. Three cars of lumber and two cars of millwood are being shipped to the factory in Ottawa every day. Mr. J. C. Howard is in charge of the mill.

The Pembroke Lumber Company is confining its operations to cutting white pine almost exclusively this season. The camps of the company, or at least most of them, are along the Jocko River, in Northern Ontario.

There is a noticeable scarcity of horses in this district. For some time Mr. Phil Wright, a reputable employment agent, and contractor for lumbermen's supplies, etc., has been trying to get sixty teams, but so far he has been only able to get about half the required number.

Prominent lumbermen of Ottawa are taking an active interest in the municipal election campaign. Through the suggestion of Mr. J. R. Booth, Mr. J. A. Ellis, the city treasurer, has been persuaded to contest the mayoralty. Mr. Booth claims that Mr. Ellis is the best man in the city to lift the city affairs out of the "hole" they have fallen into. Backing up Mr. Booth is Senator W. C. Edwards. Mr. Ellis' election as mayor is considered assured.

A few of the lumbermen have already been hard hit by the new demurrage rates allowed the railway companies by the railway commission, and the general feeling of dissatisfaction promises to be evidenced in protest to the commission against the new order.

An order issued yesterday by the Minister of Customs, Hon. J. D. Reid, forbids the importation of all kinds of trees with the bark on from New England States. This order is issued to prevent the spread of the gypsy moth. An order from the necessary forestry authorities in New England attached to the trees stating that there is no danger of moth in them will permit the importation.

A week ago, on December 18th, to be exact, Mr. George H. Millen, general manager of the E. B. Eddy Company, celebrated his golden wedding. Mr. and Mrs. Millen were presented with a gold rose bowl by the directors of the company, with a gold loving cup by the managers and agents, a gold spoon from the inside staff and a gold fork from the outside employees. At Standish Hall, the home of Mr. and Mrs. Millen, appropriate entertainment was held during the afternoon and evening. Mr. Millen has been with the Eddy Company almost the whole of his married life.

## Stiffer Prices at Tonawanda

North Tonawanda, Dec. 21; (Special correspondence of the Canada Lumberman):—Charles Weston, president of the A. Weston & Son Lumber Company of this city, figured in a \$1,000,000 lumber deal consummated a few days ago at Detroit, Mich., whereby the Chicago Lumbering Company, the Weston Lumber Company and J. D. Weston & Company, in all of which Chas. Weston was the chief stockholder, were merged and their property, consisting of three mills and 161,000 acres of timber land at Manistique, Mich., were sold to the Consolidated Lumber Company, of Manistique. A. Weston & Son Lumber Company, of North Tonawanda, has contracted for the entire output of the new firm from its Michigan mills. The Consolidated Lumber Company has a capital of \$1,400,000, and is composed of Manistique and Detroit lumbermen. The deal was financed by William S. Crowe and Louis Yalomstein, of Manistique, who have had options on the Weston holdings for some time. The officers of the company are: president, William B. Thomas; vice-president, William S. Crowe; treasurer, Louis Yalomstein; secretary, C. E. Kelso.

325,209,544 feet of lumber was received by water at the Tonawandas during the 1912 season of navigation. The 1911 receipts were 311,778,484 feet, so that 1912 shows a substantial increase. Of the 1912 receipts 69,249,240 feet came from the Georgian Bay district. The Duluth-Superior district (United States) furnished 171,211,900 feet. The largest lumber receipts in the history of the Tonawandas were in 1890, when over 700,000,000 feet were unloaded on local docks. In 1871 the receipts first exceeded the 100,000,000 mark. Since that date the maximum has reached 718,650,900, in 1890.

In spite of the holiday lull, when inventories are supposed to furnish the chief and only concern, there has been a stronger than usual demand for the cheaper grades of lumber, and prices have stiffened perceptibly. In fact there have been advances on some of the more recent quotations. Box, barn and the grades that enter into pattern lumber are chiefly affected. Inventories are expected to show a smaller total of stock on hand at the Tonawandas than usual to tide over the winter. This was to be expected, however, since so much lumber was left at upper lake ports because of scarcity of tonnage, and high shipping prices. The orders filled from the Tonawandas during the last

☛ To insure Satisfaction—State where belt is to run ☛

four months of 1912 were also larger than usual, which left the stocks greatly depleted.

Charles J. Wilk, senior member of C. J. Wilk & Company, wholesale lumbermen and millworkers, was fatally injured a week ago when he was struck by an automobile while walking on the new Buffalo-Tonawanda-Niagara Falls boulevard at St. Johnsbury, two miles from North Tonawanda. The deceased had been active in the local lumber trade for forty-nine years. His son, C. J. Wilk, Jr., will continue the business.

The next Congress will be asked to appropriate \$200,000 for further deepening the Tonawandas harbor.

Tonawanda Island and the mainland in the immediate vicinity have been greatly favored locations for lumber yards and mill sites. There is so little space left now, however, that new lumber firms are seeking other localities, and the announcement has just been made that Taylor & Crate, hardwood dealers and mill owners, of Buffalo, have bought forty acres on the Military road between Tonawanda and Buffalo and will move their Black Rock plant there. The Taylor & Crate purchase has no water frontage but it is particularly favored with rail facilities and is in the heart of a new manufacturing section that sprang up within three years.

Lumbermen are interested in the latest report that the 1,000 barge canal terminus at the Tonawandas will enter Niagara River at what is now known as the "spillway." It has been decided that the current at the mouth of Tonawanda Creek, where it was first proposed to enter Niagara River, is too swift to permit handling canal barges safely.

The National Rivers & Harbors Congress recently in session at Washington, D.C., endorsed the plans for improving the Tonawandas harbor between Niagara River and the barge canal terminals. This means that the Congress favors dredging Tonawanda and Ellicott creeks, a proposition in which several local lumber firms are vitally interested.

### Sellers Have Upper Hand at St. John

St. John, N.B., Dec. 23rd. (Special correspondence of the Canada Lumberman):—The year 1912 is drawing to a close under conditions which for the past month or two favored a very heavy production and an equally heavy consumption of lumber. The weather has been mild, practically without any frost or snow to retard building or manufacturing. The supply of lumber at present is very much below the demand and all the mills are closing down for the season with the exception of Stetson Cutler & Company, who will probably run till the end of January. Thus it can be seen that as far as this section of the country is concerned, spruce must go over into the new year in a very strong position, as far as the manufacturer is concerned. All the stocks at the mills have been entirely sold out, and as no more city cut stock can be ready before the middle of May or first of June the sellers here feel that they have the upper hand, instead of, as in the past five or six years, the buyers having it practically all their own way. This, with the conditions of uncertainty of what quantity of logs can be cut during the season, labor being scarce and the woods very wet, making logging so much slower, has caused the manufacturers to await developments, and although \$16 per thousand is being freely offered for English deals, the sellers do not believe it is necessary to let go at that price when it will probably mean at least a \$16.50 per thousand English deal market for next season's cut. Also, the American buyers are coming into the market and are very anxious to contract for next season's sawing. These, however, are meeting with little success.

As all stocks of mills have been sold out for some time, pine remains unchanged since last writing. For future delivery of English deals \$16 is being offered for a specification of fifty per cent. 7 and 8 x 3 and balance 9 inches and up with the sizes 3 x 4-5-6 at about \$14, ends \$12 on the sellers' wharf St. John. The United States market still holds, with the base price at Boston \$26 for frames 8 inches and under, 20 feet and under, but the schedule must be an easy one or the price will advance.

Laths are not quite so firm as a month ago, being quoted at \$4 to \$4.05 New York.

Freights, coastwise, are about 25 cents per thousand easier than a month ago, and unless there is more stock to ship than at present, vessels will have to look for cargo elsewhere. Vessels for New York are chartering for \$4.25 per thousand on long lumber and 85 cents per thousand on laths. Scarcity of cars has not been felt so much of late, as western freight is moving this way and cars are therefore more plentiful.

Practically no changes are expected in lumber circles in this city, the only likely addition to the mills already in existence being the J. E. Moore mill at South Bay, which will be ready for work about July 1. All mills will now undergo general repairing to be ready to start up just as soon as logs are free in the booms at St. John, which, under ordinary conditions, is about April 1st.

### Quebec Cullers' Report

Quebec, December 4, 1912.

The following comparative statement of timber, measured and culled to date, is furnished by the Supervisor of Cullers' Office, Quebec, under date of December 4th, 1912:

|                            | 1910       | 1911       | 1912       |
|----------------------------|------------|------------|------------|
|                            | Cubic Feet | Cubic Feet | Cubic Feet |
| Waney White Pine . . . . . | 541,440    | 836,480    | 1,087,600  |
| White Pine . . . . .       | 10,720     | 10,680     | 1,760      |
| Red Pine . . . . .         | 21,920     | 27,720     | 12,200     |
| Oak . . . . .              | 256,680    | 133,280    | 113,840    |

| Birch and Maple . . . . .  | 44,400     | 71,560     | 42,920     |

### The Woods Superintendent

There is no position in a modern lumber manufacturing enterprise of greater importance than that of the woods superintendent. No one on the job has such diversified problems to harmonize and bring into an exact balance which will utilize all the time of the employees comprising the divisions of the working force. From the laying of the steel on the logging spurs to the delivery of the logs at the mill his planning controls the sawyers, the skidding or hauling of the logs to the railroad, the loading on the cars, the makeup of the trains and probably he will have supervision of the railroad as well. The management of the camps, the barns and stock, the maintenance of the skidders, log loaders, wagons, carts, bummers or other implements are within his jurisdiction, so that he must be more or less of a mechanic, veterinarian, stockman, railroad man, a judge of timber and at the same time have the happy faculty of managing men. And all this with probably the least intelligent class of labor on the job, for the woods work demands brawn and muscle and it is not always accompanied by the proper proportion of brains. He does not have the advantage of constant communication with the manager, even if the telephone is available, and it is an impossibility for him to keep in close touch with the various portions of the work. A few minutes each day at each place is the best he can do. He can not hold his petty foremen to a close account for the conduct of their departments; and still he is held accountable for the average logging cost. His days are filled with travail and his evenings at camp with the planning of the following day's work or the settlement of petty disputes between the gangs of workmen. He takes his vacation in entertaining the few visitors at the camp, or occasionally when he has to go out to buy stock.

It is a wonder that the woods superintendents as a class are such good fellows, but it may be assumed that if they were not of well balanced temperaments, broad minded, intelligent and devoid of nerves they would not hold their positions. Most of them have had a varied experience in other lines connected with lumbering and find the call of the woods and the life near to nature the best suited to their dispositions. They prefer the hardships of life in the forests to the restraining refinements of near-civilization in the mill towns.

It seems anomalous that they should take such a prominent part in the destruction of the forests which have such a fascination for them, but it is a necessary part of their struggle for existence, and moving with the progress of the work they are constantly in touch with the beloved trees, meandering streams and changing landscape. And then conversion of the products of nature into the basic form of an article useful to man becomes second nature to them, while the problems constantly arising in the work challenge their aggressive ingenuity.

Whether it be a giant hardwood on a mountain slope or the pine of the southern lowlands, the cypress of the swamps or the great timber of the far West, there are always men whose lives have been spent near the forests who are familiar with the best methods of felling the trees and getting the logs to where they can be transported to a sawmill, but they need intelligent direction and supervision and it may be said that the efficient woods superintendent must be both born and made. Training is essential, but the natural adaptability is an inherent part of the individual as truly as in any other line of business.—American Lumberman.

### A Fine Calendar from the River Ouelle Company

The River Ouelle Pulp & Lumber Company, Limited, St. Pacome, P.Q., have issued one of the most attractive calendars which we have yet received. It is daintily mounted on buff colored paper and embellished with a beautifully colored reproduction of a painting by John MacWhirter, the celebrated English artist. The picture is entitled "The Gates of the Forest," and is one of MacWhirter's happiest conceptions of forest scenery.

## Good Lumber HORSES

Should be free from all blemishes

Use

### ABSORBINE

for Wind Puff,  
Capped Elbow,  
Bog Spavin,  
Thoroughpin  
Shoe, Boil,  
Curb, Enlarged  
Glands and all  
puffs and swell-  
ings, Fistula,  
Poll Evil,  
Sprains, Con-  
tracted Ten-  
dons, Bruises,  
Lameness of  
all kinds.

ANTISEPTIC

You cannot get good work out of your lumber horses if they are lame, blemished, sore, sick or similarly unfit. The animal with Swellings, Soft Bunches, Bog Spavins or any such blemish, whether lame or not, needs your attention.

### ABSORBINE

is your own and your horse's best friend—it relieves the horse of all pain, soreness and troublesome blemish. It makes the horse better looking, better working, more fit and of greater value to you. You can work your horse at the same time. This is no new lotion but the tried and tested remedy of many years successful use.

Thousands upon thousands of horses which would have been ailing and sick and unsightly have been made fit and well—good workers and good lookers. What others have done with Absorbine you can do, too. All enquiries or special cases answered without delay—full information and instruction on request. Absorbine \$2.00 a bottle at druggists or delivered.

Manufactured only by

### ABSORBINE

does not blister or remove the hair, never leaves scars or blemishes of any kind.

It is easy to apply and does not require the horse to be laid up.

Highly concentrated and only a few drops required at each application.

## EDGINGS

### Ontario

The new factory of the Beaver Board Company, Ottawa, is now well on the road to completion, and manufacturing is expected to commence there in March next.

The Michigan Central Railway Co. are arranging to build 400 box cars. Full particulars may be had from the superintendent of the Car Department, St. Thomas, Ont.

After a long illness Mr. William Caldwell, who for many years was a member of the firm of Caldwell, Boyd & Company, lumber merchants, Carleton Place, Ont., died recently at Toronto.

The Columbia Handle and Lumber Co., Adelaide street, London, Ont., will make an addition to their factory next spring. They will require wood-working machinery, belting, pulleys, oiling equipment, etc.

Garnet Creek and Seymour River Lumber Company, Limited, has been incorporated with a capital of \$250,000, to carry on business as timber merchants, saw and planing mill owners, etc., with head office at Toronto.

A by-law will be submitted on January 6th by the town of Port Arthur, Ont., for exemption from taxation of the Northern Island Pulpwood Co., Limited. The company contemplate the erection of a plant to cost \$750,000. Mr. W. M. Russel, c/o the company, Port Arthur, is the owner.

Surveys are now being made at Iroquois Falls on the Abitibi River to ascertain the amount of land that will be flooded when the huge dam proposed for the Abitibi Pulp and Paper Company is built next summer. At Iroquois Falls there is now a drop of forty feet in the river, with an island in the middle, making an ideal spot for the building of the dam and a possibility of the development of a large amount of power.

The Dennis Canadian Co. Ltd., Whitney, Ont., have bought out the mill at Whitney, Ont., formerly owned by the St. Anthony Lumber Co. They have also bought the mill and limits at Opeongo, Ont., formerly owned by Cameron & Co., Ottawa. Mr. Van Meter is manager of the Dennis Canadian Co., and Mr. A. L. Dennis of the A. L. Dennis Salt and Lumber Co., Grand Rapids, Mich., is president. The company are putting in about eight camps this winter and will have a large cut.

### Eastern Canada

The saw mill belonging to Solomon Hebert at Thetford mines, Quebec, which was recently destroyed by fire at a loss of about \$20,000 will be rebuilt at once.

The sash & door factory of Mr. Paul Demers, Van Horne avenue, Montreal, was recently destroyed by fire, which caused damage estimated at \$60,000. The insurance amounts to \$18,000. The building was a wooden structure encased with brick.

The Restigouche Log Driving and Boom Company have closed their rafting operations for the season, and have stored the booms. The amount rafted in both north and south booms was 2,484,551 pieces, making a total of 122,578,732 superficial feet, as against 1,962,131 pieces, equalling 94,910,798 superficial feet last year, a most gratifying increase.

### Western Canada

The Weber Lumber Co., Edmonton, Alta., have purchased a site in the Kennedale district and are contemplating the erection of a saw mill.

The Minnesota Pulp and Fibre Mills, Minneapolis, Minn., U.S.A., are considering a proposition for locating a mill at Arrowhead, B.C. Mr. Thos. C. Southworth is president.

Negotiations are proceeding for the erection of a plant at Medicine Hat, for the manufacture of heavy wrapping paper and kindred products. It is estimated that the plant will cost nearly \$150,000.

Crossing Lumber Company, Limited, with head office at Minaki, Man., has been incorporated with a capital of \$200,000, to erect saw, planing, pulp and other mills and deal in timber and lumber of all kinds.

The New Westminster Lumber and Woodworking Co. are considering plans for the erection of a saw mill at Burnaby, B.C. They will erect two mill buildings at 6th and 14th avenue. One building will be 40 ft. x 60 ft. and the other 60 ft. x 120 ft.

Because of the bad weather which has prevailed of late Vancouver lumber mill owners are experiencing some difficulty in securing the necessary supply of logs. Tugs are unable to make their way down the coast on account of storms, and consequently the boom grounds are being rapidly emptied.

A party of prominent Americans from Chicago and Minneapolis recently visited the plant of the Powell River Pulp & Paper Company under the direction of M. J. Scanlon, vice-president. The capacity of the plant is to be increased immediately from 100 tons of paper per day to 249 tons.

The allied timber industry, lumber mills, shingle and planing mills and sash and door factories, is the largest single line of manufacturing in Vancouver at the present time. These industries employ more than 4,000 men, nearly half the entire number employed by factories in this city, have a yearly payroll of about \$2,375,000; and have a yearly output of \$6,000,000.

A Vancouver report says that the Victoria Lumber & Manufacturing Company is constructing a new logging railway and will clear the right-of-way one hundred feet on each side of the track as a preventative against fires. The cost will be heavy, but it is considered that a saving will result in the end. This is the first company to do this kind of clearing.

The British Canadian Lumber Corporation's New Westminster mill, completed some weeks ago, is now producing the anticipated output. With three large mills, having a capacity of 140,000,000 feet per annum, the management is looking forward to a very prosperous year. The board now consists of Hon. Robt. MacKay, Montreal, G. F. Johnston, Montreal, F. L.

Buckley, Vancouver, H. E. Hopper, Victoria, C. J. Booth, Ottawa, G. S. Mayes, St. John, J. W. McConnell, Montreal, and G. B. Allison, Montreal, who replaces the late H. J. Allison.

The McDonald-Dure Lumber Company, of Winnipeg, Manitoba, a Shevlin-Carpenter concern, recently put in large stocks of lumber at Port Arthur and Fort William, Ontario. The business at these two stores will be in charge of C. Sorensen, formerly manager of the Grand Forks yards of the concern. The new business will be operated under the name of the Lakeside Lumber Company, Limited.

The Canadian Pacific Lumber Co. have secured for their mill at Port Alberni, a contract to supply 300,000 ft. of lumber to be used for the building of construction camps for the Canadian Northern Pacific Railway. It is reported also that over 1,500,000 ft. of timber will be required for bridges on the section of the road between Cowichan Lake and Barkley Sound, and that it will be supplied from the same mill.

A large retail lumber company has just been incorporated at Lethbridge, Alta., under the name of the Middle West Lumber Company, Ltd. The capital of the company is half a million dollars, and thirty or more yards will be established by them in British Columbia, Alberta and Saskatchewan. The president of the company is Mr E. H. Heaps, president of E. H. Heaps & Company, Vancouver, B.C.

The City Council of Prince Albert, Sask., has ratified an agreement with H. C. Struchen, of Minneapolis, whereby the city will secure a \$250,000 pulp and paper mill. Prince Albert will give the company fifteen acres as a site and will supply it with 1,500 horse power of electrical energy, the first 500 to be at \$25 per horse power and the remainder at \$10 per horse power. The new company, which will be organized at once by Mr. Struchen, will make building paper, insulating paper and building board.

Advices from Lethbridge, Alta., are that the Farmers' Lumber Company there has sold 10 of its outside yards to the Citizens' and Pioneer Lumber companies, controlled by Minneapolis interests. The yards are at Grassy Lake, Purple Springs, Winnifred, Whitla, Milk River, New Dayton, Magrath, Diamond City, Taber and Burdett. Peter Lund, head of the selling company, retains the yard at Lethbridge, which is to be made a wholesale distributing point for the product of his mountain mills.

Representations have been made to the city council of Prince Rupert by Miss Laura Agnew and Miss Mary H. Willing, of the W. C. T. U., that a lumbermen's home should be built there and that the city should supply a site. It is pointed out that there is nowhere for the lumbermen to go except bars, and disgraceful scenes often result on the streets in slack times. It is claimed the building could be used as an immigration hall or to relieve the hotel congestion. The matter has been referred to the city commissioners.

The Rogers Yards, Ltd., controlled by Minneapolis capital, which has been incorporated under a Dominion charter with a stated capitalization of \$2,000,000 and headquarters at Moose Jaw, Sask., is one of the most important of recent incorporations. Twenty-seven of the Coast Lumber Company's yards were taken over by the Rogers company. This gives the company control of a total of 66 yards in Saskatchewan. Under the new charter the officers of the company are: President, A. R. Rogers; vice-president, G. X. Rogers; secretary, J. J. Rogers; and treasurer, A. W. Jones. The director and attorney of the firm will be Mr. Schull.

The Capital City Box Company, Ltd., of which W. H. Gibson is president, has started operating in Edmonton. Neil McIntyre, who has long experience in the box business, is a member of the company, which owns a plant valued at \$25,000, of which \$20,000 is represented in machinery. The equipment is the most up-to-date in western Canada. All the latest machines used in box making have been installed, including planing machines, band saws, nailing, locking, wiring, printing and other machines for the manufacture of boxes of all kinds. When running at full capacity the plant is capable of turning out between 2,000 and 3,000 boxes a day. The plant is electrically operated. At present the factory is employing twenty men.

A. M. Symons, Nakusp, B. C., is erecting a new mill at Nakusp, which will cost between \$35,000 and \$40,000. The present plans are for a main building 30 ft. x 116 ft., boiler rooms, 40 ft. x 16 ft., blacksmith shop, stores and pumping houses. The machinery will consist of a rotary saw mill, Cowan planers, two shingle machines, 1-12 x 14 engine, 1-10 x 10 engine, 1-80 h.p. boiler, 1-35 h.p. boiler and a 4-block carriage for cutting long stuff. The machinery is being supplied by the Waterous Engine Works Co., of Brantford, Ont. The mill will manufacture all classes of lumber into ship-lap, V joint, drop siding, flooring, moulding, etc. The woods handled will include clear, fir, hemlock, white pine, birch and larch. The mill will also manufacture ties, poles and shingles. The capacity of the mill will be between 25,000 and 30,000 ft. per day of 10 hours. The shingle mill will have a capacity of 100,000 pieces per day. The company will make a specialty of dimension stuff up to 55 ft.

### Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing to the Department of Trade and Commerce and stating the number of the enquiry.

1325. **Wood pulp.**—A London publisher, wholesale and export bookseller, is open to undertake the representation of a Canadian firm of wood pulp manufacturers.

1326. **Wood for butter boxes.**—A co-operative shipping agency in Ireland makes inquiry for the names of Canadian exporters of wood suitable for the manufacture of butter boxes.

1359. **Tree-felling device.**—A London correspondent stated to be interested in a new tree-felling device, makes inquiry for names of Canadian lumber firms.

The report of the forestry branch of the Department of the Interior for 1911, recently issued, points out that an enormous amount of Canadian timber might be saved if a preservative was used by the railway companies for the railway ties. The report points out that the preservative treatment prolongs the life of a tie ten years.

# Modern Conditions in Lumber Camp Life

Civilizing the Bush—Old Time Hardships Disappearing Before the Railroad, Telephone, Gramophone, Etc.

By Horace A. Bell

**T**HE solitude and loneliness of the bush which (in spite of the many hardships and drawbacks they entailed) had for the old-time woodsman a certain fascination and romance, are fast disappearing into the limbo of the past. The railroad, the telegraph and the telephone are year by year bringing the remotest parts of our mighty forests into closer and closer touch with civilization. Spots which a decade ago were practically untrodden by the white man now resound with the shrill blast of the locomotive disturbing the haunts of the moose, the deer, the bear, the lynx, the marten and the mink and sending the timid creatures scurrying through the woods in dread alarm. The telephone is stretching out through the bush in all directions bringing many lonely points into intimate communication with civilization. The writer, a little more than a year ago whilst located in the bush in the far northland, more than thirty miles from the nearest settlement, was able to learn over the telephone on the night of the Dominion elections full particulars of the upheaval which had that day overthrown the Laurier administration; of the ministers who had gone down to defeat; and of the fates of many of the rank and file of candidates who were seeking the suffrages of the electors on that occasion. In the same way he was able to follow the news of the sinking of the Titanic with as much excitement as those who stood before the bulletin boards outside the city newspaper offices.

## The Railroad and the Telephone

To the shantyman the railroad and the telephone have indeed proved a boon. The railroad not only relieves him of such long and tedious journeys—which sometimes lasted several days—when entering or leaving camp, but the improved transportation facilities place within his reach many articles in the way of food which a few years ago were impossible; whilst the telephone—with which many of the shanties are now equipped—not only keeps him in touch with the outside world, and gives him the assurance that in the event of anything happening to those near and dear to him at home he can be summoned within a reasonable time, but is also valuable in case of accident in the shanty, enabling medical aid to be secured more promptly.

With all the added comforts which the shanty now affords, the older shantymen still look back with something akin to affection and veneration for the "good old days." Time has mellowed memories of the hardships then endured and only pleasant recollections remain. As they sit in camp during the long winter evenings the older men delight to tell their younger brethren of the "old comboose days"—those days of hardships, rough fare and poor pay. Pork and beans was then the staple diet; it was with unwavering regularity, the only item on the menu at every meal, and on every day throughout the long season of cutting, hauling and driving. Lack of transportation facilities rendered more sumptuous fare impossible. Tea was a delicacy for which the shantyman had to pay himself if he needed it; potatoes were, generally speaking, unobtainable, and when perchance, some were secured, they were considered as much of a luxury as the average citizen regards fresh strawberries in mid-summer. To-day instead of the monotonous round of pork and beans the lumber-jack sits down to a free, substantial well-cooked repast of soup, fresh meat,

potatoes, carrots, turnips and other vegetables, and pies of various kinds, washed down by as much tea as he cares to drink.

The old-time type of shantyman is fast disappearing with the advance of civilization. As the use of steam has reduced the efficiency of the seaman, so modern methods have impaired the efficiency of the "lumber-jack." Not many years ago when the lumber camps were situated at greater distances from the railway, he was much more of a handyman than he is to-day. With his axe and his jack-knife he could perform wonders. The shanty then had not a single piece of iron or steel in its construction. Nails, hinges, bolts, &c., were all fashioned out of the lumber of which there was such an abundance around. To-day these and similar appliances can be shipped into camp at less cost than would pay the wages of the men to make them in such a primitive way. The shantyman now uses his axe almost entirely for felling and trimming the trees, and his dexterity with that instrument has decreased accordingly. It is interesting to watch a bushman of the old school handle an axe. He can shape a log into a desired form with as much precision and skill as an expert carpenter with a costly set of tools. With his jack-knife, too, he can, with remarkable facility, whittle a piece of wood into useful articles or ornaments—pipes, dancing dolls, model boats, &c.—and many artistic and interesting products are the result. One requires to see a bushman in his hours of ease to appreciate the full value of the expression "whittling away time."

## Old Time Methods of Passing Time

The younger generation of bushmen is much less adept with the jack-knife. When the majority of the men could neither read nor write, and when the mail arrived at long and irregular intervals, they were forced, in order to drive away the dreary monotony which ensued when the day's work was done, to resort to wood carving or some similar occupation. To-day they are better educated; and, with a fairly regular mail service, they secure the latest newspapers and magazines, in the perusal of which time hangs less heavily on their hands. The events happening in the busy world are no longer a sealed book to them during their sojourn in camp.

Even in matters musical they are now able to keep themselves more or less up to date. The gramophone (which is to be found in some of the camps, where either one of the more thrifty of the men is the proud possessor of one of these machines, or where the men club together and make monthly contributions for the hire of one) enables the lumber-jack to become acquainted with the latest song hits of the day, and on his return to civilization the tunes which he hears everyone humming around him are as familiar to him as if he had never been away in the lonely forest. He has had a long spell of solitude; his fellow-bushmen and the forest trees have been his only companions, but he returns home, not as of yore, with a feeling that he has been isolated altogether from the rest of mankind during his absence, but with an intelligent understanding of the events which have moved the world to laughter and tears while he has been away.

With the constant civilizing of the bush much of the romance will disappear; but the shantyman will be the last to deplore the altered conditions of things.

## Astonishing Reductions in Fuel Bills

effected by ordinary pipe coverings when placed on bare pipes are not as remarkable as the reductions J-M Asbesto-Sponge Felted Pipe Covering makes in fuel bills when placed on pipes previously insulated with ordinary covering. Repeated tests prove that J-M Asbesto-Sponge Felted Pipe Covering will save about 26 per cent. more coal than any ordinary covering. It will carry steam over a mile with practically no loss. The secret lies in the fact that

## J-M Asbesto-Sponge Felted Pipe Covering

contains more dead air cells than any other covering.

Vibration or rough usage will not crack, break or cause J-M Asbesto-Sponge Felted Pipe Covering to crumble or lose its insulating efficiency. It retains its superior efficiency indefinitely, because made from many layers of a thin felt composed of best quality Asbestos Fibre and fine particles of granulated sponge. To use J-M Asbesto-Sponge Felted is an investment, not an expense.

**Schacht**

**--The Lumber Truck  
 that Builds Big Business**

Do you know that one Schacht Lumber Truck is worth more to you in dollars and cents than six to eight teams and wagons?

Men who have experimented say that horses can no longer compete with motor trucks in the lumber business.

Won't you let us show you where you can save money on your 1913 operating expenses?

Our booklet will be mailed free on request. Write for it.

**Schacht Motor Car Co.  
 of Canada, Ltd.**

**Hamilton, Ontario**

The Truck with Good disposition — built for Canadians with Canadian money.

**A Few Specifications—**

Motor, 45-50 H.P., four cylinders.  
 Ignition, magneto, with double system.  
 Oiling, plunger pump in crank case, separate feeds to all bearings, with splash system.  
 Clutch, cone, thermoid faced, 15½ in. diameter.  
 Transmission, selective sliding gear, 3 speeds, forward and reverse.  
 Emergency Brakes, internal, expanding on rear wheels, 18-in. drum. Service brakes on each end of jackshaft.  
 Frame, rolled steel channel section, 6-inch side members.  
 Frame, 217¼ in. long, 38¾ in. wide.  
 Axles, rear, rectangular, 2¾ in. wide, 4 in. deep, drop forged. Front Timken, 1 beam with solid section through centre, 2 in. wide, 2¾ in. deep, dropped forged.  
 Bearings, Timken roller bearings in wheels, jackshaft and steering knuckle, annular bearings in transmission.  
 Tires, 36 x 4 in. single front, 36 x 5 in. dual rear.  
 Wheel Base, 144 in.; tread 64 in.  
 Speed, 10 to 18 miles per hour on direct.  
 Loading Space, 11 ft. 5 in. back of seat on chassis frame.  
 Body, to order.

 Ton Capacity**

# Experience in the Mills

## Has Demonstrated

That our Saws will answer the most exacting requirements

They are manufactured from **Razor Steel** made exclusively for us. Tempered by our **Secret Process**, the raw material is refined and toughened to such an extent that the finished saw will stand up to the work and retain its cutting edge longer than any other saw on the market. We fully guarantee every saw manufactured by us.

## By its deeds the **FAY-EGAN "LIGHTNING"** No. 275 has become known as the **Matcher** which meets all the requirements of the general planing mill:—

### Some Actual Results Obtained

J. A. FAY & EGAN CO.,  
Cincinnati, Ohio.

Gentlemen: We purchased one of your No. 275 Matchers, size 16 x 8, a little over a year ago, and have been running it continually ever since, working all sorts of material on it from 1/2-in. ceiling to sizing 16 x 8 timbers. In fact, most of the time it has been doing the work of a timber sizer and I must confess in all my 25 years of experience I have never seen its equal for the amount of work it will turn out. It has the most wonderful feed for its size, and I have run all makes of machines.

No one need be afraid of buying one of these machines for general all around work and I heartily recommend it to any wanting such a tool. We have not had a cent of repairs, and if we could not secure a duplicate of it, would not take twice the amount we paid for it.

We congratulate you on the development of such a machine and wish for you the hearty success you deserve. We are also well pleased with the other machines we purchased from you.

Yours very truly,  
SHAW BROS. COMPANY,  
By David Shaw, President.

Macon, Ga.

J. A. FAY & EGAN CO.,  
Cincinnati, Ohio.

Gentlemen: This is to certify that I did run through one of J. A. Fay & Egan Co.'s Planers and Matchers, namely the No. 275, 24-in. 6-roll P. & M. the amount of 8,025,630 feet of roofers averaging 1-in. in thickness and 7-in. in width, during the year of 1911. The record is actual figures on our books and does not count stock sold in local market, amounting to about 75,000 feet. The machine has proven very satisfactory and we take pleasure in recommending the same.

W. B. GETTYS LUMBER CO.,  
By W. B. Gettys, Mgr.

Zebulon, N. C.

J. A. FAY & EGAN CO.,  
Cincinnati, Ohio.

Gentlemen: We are pleased to write you in regard to the No. 275 Planer and Matcher we purchased of you some time ago. We used this machine on a variety of work, ranging from 1/4 x 1/2-in. soft wood to 3 3/8 x 10 1/2-in. oak and also 4 1/4 x 6 3/8-in. hickory. We plane all this material on four sides, sometimes taking a 1/2-in. cut with the side heads on oak 3 3/8-in. thick. A large percentage of the work done on this machine is planing and matching semi-circular tank staves, 1 1/4-in. x 4-in. wide. We find we can feed all the various kinds of material as fast as a man can keep the machine full, and machine appears to have a capacity greater than this on nearly all kinds of stock, including the tank staves. We are entirely satisfied with this machine.

M. RUMELY CO. ADVANCE THRESHER PLANT.

Battle Creek, Mich.

—the actual results, both in quantity and variety, obtained by users in all parts of the country, are the strongest proofs of the value of this machine.

—note in letters herewith; the first, shows a variety of work from 1/4" ceiling of 16" x 8" timbers; the second large output on one kind of work; and third, some of the hardest work ever done on a Matcher.

—equally satisfactory results are obtained on other classes of work, everywhere, in fact, we have never put out a No. 275 that has not more than met all expectations of the purchaser.

—if you use or need a general purpose matcher, let us tell you more about the No. 275, a Matcher, Double Surfacers, Floorers and Inside Molder combined.

—write today for descriptive folder and price.

# Lumber Camp Ranges and Heaters

Our stoves are specially designed to meet all requirements of camp work.

We know exactly what is necessary and desirable in this class of stove.

We put into all our stoves the best of material and workmanship coupled with the best of expert experience.

The 'Leader Range' for coal and wood, shown in this cut is specially adapted to Lumberman Camps, Boarding Houses, Hotels and Railroad Construction Camp Work. We also make this Range with side hinge doors.

It is large, heavy and strongly built. Has good oven space and large heating surface. When a good, solid, reliable stove is wanted the 'Leader' will give satisfaction.

Write for our catalogue.

## HUTHER BROS. PATENT GROOVER OR DADO HEAD

For cutting any width groove from one quarter inch to 2 inches or over

Can be used on any Circular Saw Material. Will cut a perfect groove with or across the grain. This is the only Dado Head on the market that gives entire satisfaction on all classes of work. No screw adjustment. For different width grooves, simply remove or add inside cutters. Sold by builders and dealers of wood working machinery in all parts of the United States. Will send on approval, in competition with any other make on the market; if not the best return at our expense. HUTHER BROS., SAW MFG. CO., Inc., 1170 University Ave., ROCHESTER, N.Y., manufacturer of Circular Saws, Morgan Pattern Lock-Corner Box Cutters, Concave Saws, etc:

# If you are in need of a Band Saw—You should have the best.

## Our Latest No. 36" Ball Bearing Band Saw

will meet every requirement in the way of smooth and accurate cutting that may arise in your woodworking shop.

View showing micrometer adjustment.

Showing ball-bearings and Patent Straining Device for upper wheel.

## A Few Reasons Why You Should Compare This Machine Carefully Before Deciding

- REASON NO. ONE: One of the things essential in a Band Saw is ***ease of operation***—smooth and accurate cutting requires it. The Ball Bearings for both wheels on the AMERICAN machine assist in accomplishing this result.
- REASON NO. TWO: The Wire Guard for the upper wheel and the closed doors for the lower, eliminate the possibility of danger.
- REASON NO. THREE: Direct connected motor with rheostat mounted on the machine itself, provided the most efficient method of driving a Band Saw—no belts—no lost motion, very little power required.
- REASON NO. FOUR: Micrometer adjustment to the table with accurately graduated scale insures the proper tilt in either direction—45 degrees to right, 5 degrees to left.

Many other reasons are dealt with more in detail in a special booklet. Your inquiry will bring you full details without any obligation. We should like to demonstrate to you the merits of this machine. Let us hear from you.

# SELECTION OF LOCOMOTIVES

WHAT SHOULD BE KNOWN BEFORE YOU PURCHASE LOCOMOTIVES:—

Nature of the service.

Capacity of the cars and weight of train.

Character of track—is it new or old.

Length of haul.

Is time an important factor.

Do you want a quick locomotive or a big puller.

Distance from base of supplies and quarters for the men.

Water and coal carrying capacity.

All these items and more should be considered.

A careful study of conditions may mean larger profits.

Our experience may be valuable in considering them.

A dollar saved is more than a dollar earned.

Write or wire us, or better still, come to see us.

## MONTREAL LOCOMOTIVE WORKS, LTD.

Dominion Express Building, MONTREAL, CANADA

## Makes It's Mark Vivid and Lasting

Marks that remain vivid and wear like iron are a real satisfaction to the man who handles lumber. The metallic pigments, like graphite, of DIXON'S LUMBER CRAYONS offer marvelous resistance to all kinds of weather conditions. Their marks are often visible after six months of severe exposure to sun and storms.

### DIXON'S LUMBER CRAYONS

have always remained the recognized standard because of their one, uniform and dependable quality; their convenient and uniform shape and size and because of the careful selection of materials used in their manufacture. DIXON'S LUMBER CRAYONS are made in nineteen grades and colors, including black (six grades), red (two grades), blue (two grades), green, white, yellow, brown, terra cotta, violet, pink and orange. Some are made to fill particular needs—let us tell you more about them. Get acquainted.

Write for lithographed booklet No. 239, illustrated in colors.

## Rogers-Buffalo Band Saw Sharpener

### No. 6

#### WHY!

is our Knife and Saw Fitting Machinery the best?

**Because** it has proven so by giving users, in all parts of the world, **Double Service** for over Thirty Years.

We are the oldest and best known for **Quality**. Our machinery will meet the requirements of any mill large or small. Our machinery is the most **simple** on the market. Every machine that leaves our factory is thoroughly **tested and inspected**. Our prices include full equipment and when machine is received it is ready to go to work. **Many thousands** of users are our best advertisements. **Investigate** and see if your neighbor is not already one of these users.

Write for latest catalog and prices telling all about our **Automatic Knife Grinders** too. Let us help you solve your **Filing Room** problems

**Samuel C. Rogers & Co.,**

### Not altogether what we say but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

**West & Peachey - Simcoe, Ont.**

### Lumber Horses

We are specializing this season in an extra fine line of Lumber Horses, guaranteed to be young and sound in every particular, and of extra weight and quality.

Consignments of heavy horses received regularly from the best shippers of heavy horses in Ontario.

Clean and sanitary barns under Government Inspection.

Loading chutes at Barn Doors via all railways.

We can supply your wants on the very shortest notice.

# A "Heavy" Duty Engine for Sawmill Work

## The Waterous Side Crank

**T**HIS Engine is especially built for Sawmill work. It combines strength and simplicity with the ability to be on the job all the time.

There is nothing to get out of order. Parts are few, are sturdily built, and are easily gotten at for oiling and overhauling.

With an occasional wipe-down and a dose of oil on the wearing surfaces, the engine will run from whistle to whistle without a hitch.

For an absolutely reliable engine that will stand up to severe service under all sorts of conditions, we can honestly recommend the "Heavy Duty Side Crank."

Built in sizes from 60 H.P. to 600 H.P.

# Fully Guaranteed Sawmill Machinery

This is the only kind for you to buy to ensure satisfactory and continuous operation throughout the entire sawing season.

All our sawmill machinery is sold on an absolute guarantee of proper operation and perfect construction.

Naturally, therefore, we buy only the highest grade materials and use only skilled workmen, and everything is built under the most careful supervision.

These things are necessary to produce well built machinery, but they would be useless without proper design—and the “know how” of designing sawmill machinery can only come after long experience.

We have such complete confidence that our machinery is correctly designed that our guarantee is:

**“These machines are guaranteed against defective materials and workmanship for the period of one year, and their proper and successful operation is also absolutely guaranteed. Should any parts fail through defects, we will replace them free of charge, or should any machine not work properly, we will remove it at our expense and refund any part of the purchase money which may have been paid to us.”**

This guarantee goes with all our machines and we have never had to take back a standard machine yet.

And back of this guarantee is our fifty years' experience building sawmill machinery for stationary mills only.

It will pay you to buy your machinery from us this winter.

## **Timber Limits for Sale on Georgian Bay**

The undersigned offer for sale in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; Tug Scow and other Lumber Equipment, including boom chains, plows, sleighs, etc.

The Limits, part of which have recently been sold, include : 440 square miles of licensed and deeded Pine, Hemlock, Spruce, Birch and other timber. The licenses from the Ontario Government include all timbers and are not restricted for time. Government dues are as follows : Saw Logs, White Pine, \$1.50 per M. ft., B.M. Saw Logs, Hemlock, Tamarac and other woods 75c. per M. ft. The timber is situated in the Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street. The Canadian Pacific, Canadian Northern and Grand Trunk Railways run through the limits, which makes some of the parcels offered for sale particularly desirable for small mill owners.

A circular giving full information, maps, terms and conditions of sale will be furnished upon application to

# Pine Doors That Are Right

Our  
**No. 3 Pine Doors**

are the leaders in the line. We have put in special new plant and machinery in order to turn out the best Pine Door that can be produced and we have now made

**No. 3 Pine Doors our Specialty**

We are taking particular care of this line and we guarantee every door to be thoroughly well-made from good sound kiln-dried lumber. With our large output we can satisfy you on quality—at the right price. Large and small shipments made on short notice. Special attention given to Rush Orders. Try us with your next order for

**No. 3 Pine Doors**

THE  
**Pembroke Lumber Co.**  
Pembroke, Ontario

## Don't Hesitate

You know the old proverb "He who hesitates is lost"—Well, of course, we know that that is contradicted by the just as old proverb "Look before you leap"—The logical conclusion therefore is—"you can't do both." But that is just the trouble with many business men. They take a good look and then they hesitate. There is no need to hesitate in deciding where to purchase

## Hemlock, Pine and Hardwood

You are quite safe in coming to us—we will give you the best on the market at the right price.

Write us for quotations—take a good look at our proposition then send us your order at once. Don't Hesitate.

# GARLOCK PACKINGS

## Garlock Regular Rings

For all general purposes outside of high pressure work. This Packing is a special grade thoroughly lubricated with the celebrated "Garlock" compound, and is the perfected result of over thirty years experience in manufacturing fibrous Packings.

## Garlock Square Duck Packing

Made of good quality Cotton Duck and friction for cold water.

## Garlock High Pressure Gaskets

Absolutely heat proof, will not vulcanize or blow out under any steam pressure, being made of long fibre Asbestos Brass Wire Insertion.

## Garlock Red Sheet Packing

Made of high grade Rubber compounded in such a way as to give it great strength and reliability.

This Packing has established wide reputation on its own merits.

## Garlock Cloth Insertion Sheet

Used on cold and warm water pipes. Is unexcelled in pliability, smoothness of finish and strength of Cloth Insertion.

## Garlock Rubber Valves

Specially made to meet specific conditions—absolutely unaffected by oils.

Before placing your next order for supplies get our prices on Leather, Rubber and Canvas Belts, Hose, Brass Valves, Babbitt Metals, Saw Blades, Files, Emery Wheels, etc. Write for catalogue.

Below is a list of Dry Lumber  
which we can Ship Promptly

#### POPLAR—

All grades and thicknesses in stock dry.

#### CHESTNUT—

No. 1 Common, 4/4 regular, 3 carloads.  
No. 1 Common, 5/4 regular, 1 carload.  
No. 1 Common, 6/4 regular, 4 carloads.  
No. 1 Common, 8/4 regular, 2 carloads.  
No. 1 Common strips, 3 to 5½ in., 4/4, 3 carloads.  
Quartered sound wormy No. 1 Common and better,  
pin worm holes no defect, 4/4 reg., 4 carloads.  
Sound wormy, high grade, 10/4, reg., 2 carloads.  
Sound wormy, high grade, 12/4, reg., 2 carloads.

#### BASSWOOD—

No. 1 Common, 5/4 regular, 4 carloads.  
No. 1 Common strips, 4/4, 4 to 6 in., 2 carloads.  
Will make exceptionally attractive prices on any of  
the following:—  
2 cars 5/8, 18 to 23 in., Poplar Panel and No. 1.  
2 cars 5/8, 24 to 27 in., Poplar Panel and No. 1.  
1 car 5/8, 28 and up, Poplar Panel and No. 1.  
3 cars 4/4, 12 to 17 in., Poplar Panel, 1's and 2's.  
All our own manufacture, band sawed, and thoroughly seasoned.

Cross-Sectional Side View of Hanchett Band Swage Shaper. Showing large dies with completely encircling head bearings, double end tooth stop, and long saw rest and guides, insuring perfect adjustment and control of the shaper and rapid operation.

Cross-Sectional Front View of Hanchett Band Swage Shaper. Showing right and left screw thread operation of the dies, insuring equal pressure of the dies on both sides of the tooth and absolute accuracy in dressing the saw teeth.

# The Importance of Efficient Mill Machinery

**In Millwork**, where every portion of the equipment has to undergo the severest treatment with unusually hard conditions only the best machinery will serve. No mill can be run at a profit with inferior equipment. This is an expression of the opinion of men of wide and varied experience in the business.

P. Payette's Improved Mill Machinery, is built to stand all the strain and hard usage of mill work. This machinery is of the special Payette design and embodies many improvements, which add considerably to the efficiency of mill equipment.

**The New Patent Saw Mill Dog** which operates in soft or hardwood timber of any kind will do good even work in summer or winter with perfect safety.

**Payette's Improved Set Works** will set even thickness of lumber in all class of timber and will set any size log with perfect ease. Can be changed instantly so as to make either thick or thin lumber and can be put on any make of carriage.

We want to prove to you the advantage of this set works in your mill and we are prepared to demonstrate its efficiency and superiority. Full information sent on application. Ask for our booklet on set works.

# A Belt which Conveys ALL the Power

Practical men know the drainage of power from a slipping belt, *and because they know*, they are buying

## GOODYEAR RUBBER BELTING

Which Neither Slips Nor Stretches

It is built up, layer upon layer, of close-woven, long-fibre, cotton fabric, rubberized and cured under Goodyear processes. And every Goodyear belt has in it the lowest possible minimum of stretch, because the belt is "cured" whilst stretched to the limit of safety in a special machine.

### That is the Goodyear Method of Belt Manufacture

And the result is entirely satisfactory to belt users—a fact to which our enormously increased sales testify. What is the significance of this **CONTINUED SALES INCREASE — 50%** over last year? Simply that Goodyear Belting more than fulfills the claims made for it by the

Goodyear people—who know what a belt should do, and make a belt to do it.

It has cost us less than \$200.00 for claims or adjustment of every kind in connection with our total output for the past two years—a remarkable tribute to Goodyear reliability.

### Look into the Belt for Yourself—Try to Tear It Apart.

Make a cut in the top layer—and then try to pull it apart. You will get a faint idea of its strength.

That is the result of forcing rubber at tremendous pressure through the fine cotton fabric—separating every strand—thus abolishing all internal friction or grinding. Whilst these layers of fabric are afterwards so compressed as to be almost homogeneous, the finished belt bends easily, the "duck" being so woven as to retain complete pliability in the finished belt.

**For Main Drives and  
High Speed Pulleys  
GOODYEAR Belting is the Best**

It has all the tensile strength necessary to absorb tremendous strain without slip, stretch or rent. The grip of rubber and the prodigious strength of hard-twist cotton fabric are united, and prove equal to every emergency.

Where the power transmitted is high, and great tensile strength is essential, Goodyear Rubber Belting proves its worth.

ber Belting proves its worth.

EVERY GOODYEAR BELT IS SUBJECTED TO A STRINGENT TEST BEFORE LEAVING THE FACTORY, and what is more, the materials used in the manufacture are also tested in the Goodyear laboratory before using.

### IF YOU USE A BELT AT ALL IT WILL PAY YOU TO USE A GOODYEAR

Loss of power is loss of profit—and an inferior belt is dropping power all the time. Goodyear belting quickly earns its cost in power saved and trouble avoided.

### TWO HUNDRED AND FORTY ROLLS—A TOTAL OF 72,000 FEET

We have just received an order for this quantity of GOODYEAR RUBBER BELTING from one business concern in the west, for the equipment of interior elevators. Such an order shows supreme confidence in the quality of GOODYEAR Belting.

If we have not just the belt you require we will make it for you.

In the choosing of belts our booklet would be of great assistance to you. We supply it free. Write to our nearest Branch for one.

## TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, \$2.00 per year in advance; other foreign countries embraced in the General Postal Union, \$3.00.  
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

## Quebec's Pulpwood Policy

The action of the Government of Quebec in removing the prohibition of the export of pulp wood cut from Crown lands has met with little or no opposition in Quebec and is commended from many quarters. In the United States the opinion of the change may not be very favorable, but in Quebec and in other parts of Canada it is likely to meet with general approval. Practically speaking, the removal of the restriction against the export of pulpwood leaves the government exactly where it was before, for the companies which have been given permission to export—if the removal of the restriction means anything—are companies which have erected large plants for the making of pulp and paper, and it would be a suicidal business for them to export their raw material, when by exporting the finished article they can make a much greater profit. The owners of freehold timber in Quebec will still be in a position to export their pulp wood and will have no reason to fear competition from the owners of Crown land pulpwood. It is even conceivable that with the markets of the United States thrown open, Canadian mills may compete so strongly for the purchase of Canadian pulpwood that the amount of freehold pulpwood exported may decrease considerably.

The justification of the new policy of the Gouin Government is, that under it no more of the Crown land pulpwood will be exported than before, and the paper manufactured from Crown land pulpwood will be entitled to free entry into the United States. Many causes contributed to bring about this result, which, at first glance has the appearance of being a reversal of the principle that was laid down a few years ago that pulpwood should not be exported. The policy of prohibiting the export of pulpwood from Crown lands had so immediate an effect that the industry of manufacturing paper in Quebec made wonderful advance. In the course of the few years which have elapsed since prohibition was imposed, so many large

paper producing plants have been erected in Quebec that there is danger to-day of over-production unless the markets are extended. The only way to extend them is to put the owners of Crown land pulpwood in a position to export their paper to the United States without payment of duty when it crosses the line. Apparently, therefore, the very success of the prohibition made it necessary to remove it after a few years so that the mills which have been fostered by prohibition might find an outlet for their increasing production. These mills represent great amounts of capital and they give employment to large number of Canadians. They have brought into existence a number of important towns such as Shawinigan, Grand'Mere, Chicoutimi and Jonquieres, and half a dozen other places where prosperity prevails throughout the year. Without the markets of the United States these mills and the villages and towns which surround them would have been in danger of financial depression of the most acute nature. By the removal of the restriction they are put in exactly the opposite position, for the mills affected are now considering plans for extensive enlargements. At present their combined capacity is 400 tons per day.

The duty upon paper entering the United States from Quebec when it was manufactured out of Crown land pulpwood amounted to \$5.75 per ton. Whenever the price on the other side was high and the competition only normal it was possible for these Canadian mills to sell their production in the United States in the face of this duty. Of late, however, the mills in the United States have had plenty of water power and have been able to turn out so much paper that the demand for Canadian paper has fallen off. In addition to this, the Quebec mills which are fortunate enough to secure their pulpwood from private lands were able to export their product to the United States free of duty under the reciprocity act passed by the United States and not rescinded, so that the owners of mills in Quebec operating on Crown land pulpwood have lately had to meet keen competition in the markets of the United States, both from the United States mills and from the Quebec mills which were more favorably situated in regard to securing their raw material.

Taking all these conditions into consideration it seemed, to those in the paper industry in Quebec and to the government of the province, that the logical solution of the problem was that the prohibition of the export of pulpwood from Crown lands should be removed so that the markets of the United States should be open to the products of all Quebec mills upon an equal footing. The Gouin Government has faced the situation squarely and decided to make the change in spite of the fact that by so doing it was rendering itself open to the charge of going back to its convictions of a few years ago. That they have not been accused of this is made evident by the manner in which the change has been received in Quebec. The Quebec Chronicle, which, politically, is opposed to the Gouin Government, in a recent issue published a lengthy editorial commending the government for the course which it has taken, at the conclusion of which it says:—"Those who see in the change any danger of a wholesale exportation of our raw materials are needlessly alarmed. Is it conceivable that the manufacturers would cut their own throats by exporting to any extent the wood which they want for their own use? Should there ever be any attempt to deplete our national resources by any serious shipments of raw wood we have it on the best of authority that effective steps would be taken to prevent it at once before it assumed any considerable proportions."

The course which has thus been taken by the Government of Quebec was suggested by the action taken recently by the Government of British Columbia in the case of the Powell River Paper Company. Speculation has already commenced to appear as to whether the Government of Ontario will be forced by the course of Quebec and British Columbia to place paper manufacturers within its borders on an equal footing with those in the other provinces.

Mr. Wm. Price, ex-M.P., a member of the firm of Price Bros., one of the companies benefited by the change, states that the removal of the prohibition will enable the four companies affected to do \$1,000,000 more of business this year than they could otherwise have done. So far as the paper-making industry of Canada is concerned,

therefore, it looks as though the change, radical as it may be, will meet with general approval. What will be the opinion on the other side of the boundary line? It is conceivable that the paper manufacturers of the United States will be alarmed by the invasion of Canadian paper into their market. Already they have been crying out loudly against the competition of Canadian mills, and have tried to

have the Reciprocity Act repealed, in so far as it permits the free entry of paper from Canada. It will be interesting to watch the result of their efforts along this line, especially when a Democratic Government at Washington attempts to put into effect its policy of reducing the tariff all along the line until it is based upon the principle of tariff for revenue only.

## The Proposed Southern Freight Increases

The hearing which was recently given at St. Louis, by Commissioner Meyer, to the complaint of shippers against the advance in freight rates on lumber from Tennessee, Mississippi and other producing points in the Southern States to points north of the Ohio River and to Canadian points, brought out a great deal of testimony upon the subject, much of which bears a striking resemblance to testimony which has on similar occasions been given by Canadian railways before the Dominion Board of Railway Commissioners, when proposed advances in freight rates were under discussion. There seems to be, according to the evidence presented, a peculiar similarity between the habits of railroads in all countries. For instance, it is made clear that in practically every case the railroads are seeking to promote the interests of the shippers when they alter their freight rates. With remarkable unanimity the railroads, in their evidence, seek to give the impression that any alterations which they make in freight charges are not increases, but simply readjustments, based upon a desire to make the charges more uniform and equitable. Their witnesses also invariably state that the number of increases which may be involved in a proposed set of changes are amply off-set by the number of decreases. Examination, however, shows that this statement is generally unfair, as the decreases, although numerous, refer, with scarcely any exception, to points of no importance, so far as the shipments under consideration are concerned, while the increases affect places to and from which extensive shipments take place. Evidence of this nature has been brought out frequently before the Dominion Board of Railway Commissioners, and it was one of the features of the hearing before Commissioner Meyer. A great deal of evidence was presented and much more is still to be taken and will be heard at a session to be held in Cincinnati on January 24th. In the meantime it is interesting to note that the Interstate Commerce Commission of the United States has extended until June 30th, 1913, its suspension of the proposed rate advances.

In addition to the general interest which Canadians will take in all cases of this nature, this question involves other situations which are of importance to the Canadian lumber trade and to the consumer of lumber in Canada. From the point of view of the manufacturer of lumber in Canada the proposed rate advances will probably be approved, as they would provide a means of reducing the competition from southern pine which has become so important a feature in Can-

adian trade during the past few years. So far as the consumer is concerned the situation from a theoretical point of view may seem to involve the price of lumber. This could scarcely be the result, however, unless the market for lumber should go badly to pieces. At present, with the excellent demand for practically all available Canadian stocks, the competition of southern pine can scarcely be expected to lower the prices. It is of interest, however, to note that some of the witnesses on behalf of the southern lumber manufacturers expressed a concern for the Canadian consumer of lumber which scarcely rang true. Many other peculiar claims were made by the witnesses. One of these, who spoke for the Canadian railways, for instance, claimed that United States lumbermen experienced no competition from woods grown in Canada. A Memphis lumberman, however, contradicted this claim emphatically. The same witness for the railways testified that the proposed changes in rates were made simply as a rate re-adjustment and that revenues were not considered. Counsel on behalf of the lumber shippers brought out evidence from the same witness, however, that considerable enhancement of revenues would result.

Another claim made by the railways was that the Canadian railways were getting more than their share of the freight charges. Other evidence presented showed that the Canadian railways were willing to operate under the present rates but that the railways operating above the Ohio would no longer stand for the division now being made, and wanted to force a readjustment.

Taking all of the evidence which has been presented up to date, it seems to be clearly indicated that the railroads in the United States are managed in a manner very similar to those in Canada, that they are not entirely unselfish and that sometimes they try to get a little more profit than they are really entitled to. From a sympathetic point of view Canadian lumber shippers might be excused for showing that the southern railroads in this case will be defeated. This defeat, however, would involve a continuance of the present rates on lumber into Canada under which the competition of yellow pine has become a serious menace and it would also involve a continuance of conditions which apparently favor the Canadian railroads. Naturally, therefore, Canadian lumbermen will sit upon the fence in connection with this situation and will be very much interested in the outcome, whatever it may be.

## The Standard Grading Problem

A great deal has been said in these columns from time to time about the problem involved in the grading of lumber, and particular reference has been made to the grading of white pine in Ontario. Other classes of Canadian lumber are concerned in the question also, such as hemlock, spruce, hardwood, etc. So far as Ontario is concerned, however, the debate upon the question has centered very largely around the white pine situation, and opinions both for and against have been expressed in these columns by many readers of the Canada Lumberman. Those who oppose the adoption of a set of standard rules argue chiefly from two points of view. In the first place they claim that the plan is not feasible on account of the widely varying conditions in the markets in which the lumber from the different parts of the country is sold. In the second place they call attention to the fact that most of the manufacturers in Canada have their own grading systems which have been developed by long usage. These firms would be strongly opposed to any change in their methods and would be extensive losers,—so they believe—if some of their special grades were eliminated. The opponents of

standard grading also ask where rules for grading pine have been put into operation successfully.

We have attempted to reply to these questions and arguments so far as we could, in previous issues. The question is one which is occupying a good deal of attention to-day and we consider it timely to repeat some of these arguments. The attitude of the Canada Lumberman upon this subject is simply that it desires to assist in bringing about any change in present conditions which will be a benefit to the trade and to the industry as a whole. We find many members of the trade who declare that standard grades can be successfully established and adopted and that it would not even be a difficult problem to bring this about. On the other hand, we find some of the manufacturers, particularly the larger and long-established firms opposed, as above explained. Those to whom we have spoken on the subject during the course of several years include a far greater number in favor of standardized grades. For this reason the Canada Lumberman has done what it could in the past to promote the change.

The question came up last year at the annual meeting of the Canadian Lumbermen's Association at Ottawa, and was referred to a committee consisting of J. S. Gillies, Braeside, Ont.; F. N. Waldie, Toronto; W. C. Laidlaw, Toronto; P. C. Walker, Ottawa; A. H. Campbell, Montreal, and R. Kenny, Buckingham, P.Q. This committee will probably be asked for a report at the next annual meeting on February 4th.

The history of the adoption of grading rules in the United States, wherever they have been put into use, has been that a great deal of opposition has always developed from the beginning. The opposition has generally been of a similar nature to that which has met the proposal in Canada. Yet in the United States the use of grading rules has taken firm root in many parts of the country and seems likely to become universal in the near future. Everyone in the lumber business knows of the results which have been secured in the United States in connection with the grading of hardwoods. Harmony has been brought out of chaos in the hardwood trade and industry by the adoption of standard grading rules, in spite of the fact that, at the outset it seemed as though the hardwood trade presented greater difficulties than any other branch of the lumber business.

In connection with pine a most important instance is afforded by the case of Northern Pine Manufacturers' Association. The rules which they use were adopted by the Bureau of Grades of the Mississippi Valley Lumbermen's Association and the Wisconsin Valley Lumbermen's Association in the fall of 1894 and have been in force ever since. In 1906 these two associations were merged into an organization called the Northern Pine Manufacturers' Association. Since that time there has been a constantly increasing demand for their rules, not only from persons in the lumber business, but from those in other lines who consume large amounts of lumber. The army and navy departments of the United States recognize these rules as the basis for grading white and Norway pine, and the Bureau of Grades is receiving requests for them from chiefs of the army construction boards and navy yards. Requests from lumber dealers and others interested in pine grades in foreign countries are being steadily received and these rules are generally recognized as the standard for white and Norway pine.

Six editions of the rules have been issued. Only slight changes have been made and these have been suggested by the experience of the intervening period during which the work of unifying the grading of white pine and Norway lumber has been carried on under the auspices of the organization mentioned. The rules express, as nearly as it is possible to define them, the grades of lumber being made under the supervision of the Bureau of Grades with its corps

of inspectors. Ninety-five per cent. of all the white pine and Norway lumber made in the region west of and including the Wisconsin Valley in Wisconsin and in the Mississippi Valley between Minnesota and Missouri, is graded in accordance with these rules, and is subjected to the supervisory inspection of the employees of the Bureau of Grades.

The case of the Northern Pine Manufacturers' Association should be sufficient to cite as an answer to those who ask where standard grading rules have been successfully introduced in connection with white pine. Another instance of a similar nature, however, is that of the grading rules adopted in California for white and sugar pine, and in Idaho for Idaho pine. The success which has attended these movements encourages those in Canada who have the adoption of standard grades at heart, to keep at it until they secure results.

Straws which indicate the direction of the wind are to be found in the actions taken recently by the Hemlock Manufacturers of Ontario and the Sash and Door Association of Ontario. The Hemlock Manufacturers sought the assistance of the Canadian Lumbermen's Association in enforcing a set of rules which they had drawn up. They secured moral support of some extent but not actual support from the association, and accordingly decided to adopt the rules on their own account. They have been printed and distributed and have already had an important influence upon the trade in Ontario. The Sash and Door Association of Ontario has been stirred up recently by the importation of cheap doors from the United States. In the course of discussion upon the subject at their meetings the sash and door men came to the conclusion that they were seriously handicapped in their operations by the fact that few of them ever know what they will get when they order their lumber. They are sadly in need of a definite system of grading for the lumber which goes into sash and doors.

A committee was appointed at the last meeting of the association to consider the grading question, and this committee will probably report at the next meeting on January 24th. If the sash and door men should adopt a set of grading rules they would each benefit personally by becoming more familiar with the class of lumber which they require, and they would be in a position to insist upon receiving such lumber whenever they ordered it. Altogether the grading question in Ontario, though still a long way from a satisfactory solution is occupying more serious attention to-day than it did a few years ago, and the indications are that definite results may be secured in the near future, if only a few of the large firms who are now opposed to it can be led to realize that their own advantage will be served in the long run as well as the advantage of the trade as a whole, if standard grading rules are adopted.

## Importance of the Watchman in a Sawmill

The importance of a night watchman in a sawmill or wood-working plant is frequently overlooked. One is very apt to employ a watchman and then conclude that he has done everything necessary for the protection of his plant from fire at night. This is one of the tendencies of human nature which often leads to disaster. In connection with the employment of the night watchman the old adage holds very good: "if you want a thing done well do it yourself." One cannot be his own night watchman, however, and the next best thing is to adopt the best means available for making sure that the night watchman is capable and conscientious. Dealing with this subject a prominent insurance company in a bulletin to its policy-holders and inspectors recently summed up the situation as follows:

A study of the conditions connected with each fire as it occurred convinces us that the fortunate escape from the heavy losses of the past year is largely due to the better understanding of the watchmen of their responsibility and duties, the employment of a greater number of watch clocks in the service, greater attention to their reliability and the proper checking of the records. This is a feature of plant protection to which the company has devoted much study and investigation, and which through its bulletins and its staff of plant inspectors, it has striven to bring up to the highest state of efficiency. Not only results in handling fires, but conditions at the plants, as dis-

closed by reports of inspectors, indicate that the watch service has been greatly improved.

The time of year is again at hand when watchmen decidedly prefer the comfort of the warm boiler house to patrol work out in the open. With the engineer and night fireman on duty the presence of the watchman is not needed at the boiler house, and the fiat should go forth that two rounds of twenty to twenty-five minutes each for small plants or one round of forty-five minutes on large properties shall be regularly made, with an interim of rest of not more than fifteen minutes. Alliance inspectors are already reporting considerable irregularity of records and evident shirking of duty at the plant to examine the night and Sunday records of each watchman as conscientiously as the time of any other employee, with as careful checking as would be given an invoice of machinery before payment. An accounting should be promptly demanded of watchman for each station skipped, and the reason noted on back of record. Repeated omissions—necessary or unnecessary—should result in a change in the service. If the omissions were unavoidable through illness or press of other duties an assistant is needed while the emergency lasts. No work connected with the entire operation can possibly be so important as that of the watchman if a fire comes—and you cannot afford to "chance it" for a single night that it will not come.

# Forestry Students in Practice Camp

Important Volume and Growth Data Secured on Interesting Red Pine Stand—Description of Methods used in the Field

By H. R. Christie

A veteran Red Pine 355 years old

managed by the School of Forestry in accordance with principles of forestry. Up to the present no such location has presented itself. Previous practice camps have been held as follows: at Rondeau Park and Burnt Lake in May, 1908, with three students; at Franks Bay on Lake Nipissing in 1909, with four students; at Bala, Muskoka, in May, 1910, with seventeen students; at Fort William Government Nurseries in May, 1911, with 17 students; at Franks Bay on Lake Nipissing in October, 1912, with seventeen students. The fall camp has been found to be a decided improvement over a spring camp, so far as working conditions are concerned. The only drawback is that it interferes considerably with the lecture courses at the University. The 1909 camp at Franks Bay was reached by a forced march from Callander over the old Nipissing trail. The march was "forced" because the boats had not begun their trips for the season. The camp of October last was reached by steamer from Sturgeon Falls.

## Where the Camp Was Located

Franks Bay is located on the south shore of Lake Nipissing east of the French River and is situated in the township of Patterson, District of Parry Sound. The woodland in the vicinity is under lease to J. B. Smith & Sons, Toronto, and the Strong Lumber Company, Orillia. Their limits lie side by side and the camp was located a short distance from the boundary line separating the two limits, which is the line between lots 25 and 26 of the township. J. B. Smith & Sons cut over the land west of this line twenty-four years ago, when they had a mill at Franks Bay. Their present mill is at Callander, to which the logs from their different camps are towed. In Toronto the company operate a woodworking factory and lumber

yard and are well known to the lumber trade throughout the country. The Strong Lumber Company, Orillia, Ont., are at present logging on almost a pure stand of even red pine standing right alongside of the slash from the operations of the J. B. Smith & Sons limits of twenty-four years ago, and extending for a mile back from the bay. The logs cut upon this portion of the limit are to be towed to Geo. Gordon & Company's mill at Cache Bay, Ont.

The combination of conditions outlined offered exceptional opportunities for a practice camp. Standing side by side in sharp contrast were the mature pine and the reproduction on the 24-year-old slash, the present logging operation and the results of a former one. In addition to these conditions there were also the inevitable burns or brules, not far distant from the wooded areas. The students were given a hearty welcome by the representatives of both the lumber companies, who were most obliging and did everything in their power to enable the foresters to take advantage of the opportunities afforded by the natural conditions of the country. J. B. Smith & Sons permitted the students to use a large house which had been built when their mill was at the bay, and the Strong Lumber Company gave them a free hand in carrying on their practice work in the timber.

## The Day's Work in Camp

An idea of the camp may be secured from the following brief description. The camp lasted from October 4th to the 28th inclusive. All told there were twenty-one men in the camp, 17 students of the junior and senior years, two instructors, cook and cookee. Each man furnished his own blankets and personal outfit. The camp rules were as follows: Turn out 6 a.m., breakfast 6.30., work 7.30 a.m., lunch in the woods as a rule, return 5 p.m., lights out 10 p.m. The few rainy days that occurred were utilized for compiling data of field work, mapping, etc. In addition to the duties involved in the forestry work of the camp, occasionally opportunities were given for enjoying the life in the woods in another manner. Game was quite plentiful and the enthusiastic Waltons and Nimrods of the party pleased everybody, themselves included, by their contributions to their common board. A deposit of \$40 apiece was required from each man in advance. The total expenses per man for the camp, including board and transportation from Toronto and return, varied between \$30 and \$35. The balance being refunded.

The actual work done in a camp of this nature is outlined in

the programme furnished by Dr. Fernow, Dean of the Faculty of Forestry of the University of Toronto. The object of the practice work in the field is two-fold, according to the statement of the programme, namely, to become familiar with the use of various instruments and to collect data for a working plan. Work, therefore, was divided under three heads, namely, (1) surveys, including topography, location of camp and roads; (2) mensuration, including estimating, rate of growth, studies and construction of yield tables; (3) silvicultural studies, including forest description, silvica, reproduction and marking out fellings and thinnings. Mr. A. H. D. Ross, of the Faculty of Forestry, supervised the survey and mensuration work, Dr. Howe was in charge of the silvicultural studies and practice. In this field the class was, as a rule, divided into groups of two or four students, each group working independently, either as to area or character of work. The results were collected, tabulated and finally put together into a working plan report; the data gathered by each group complementing each other was pooled, so as to secure information covering a large area and a sufficient number of trees. Each student was required to keep a daily journal and not book recording the work performed, the time consumed and the data secured.

The programme for the survey work covered six days, and included pacing and estimating distances and areas, preparation of a location map of the camp. Astronomical observation to locate magnetic declination, plane table and transit triangulation, lot surveying with transit and chain, staff compass and chain, and compass and pacing; topographic survey of 25 acre lots with 10 ft. contours by various methods; reconnaissance of 6,300 acres or 10 square miles; locating system of logging roads and camp for this area.

The programme mensuration work covered six days, including practice work in estimating diameter, height, felling details and volume; construction of volume tables and curves; measuring and estimating volumes of 25 acre stands; constructing growth and yield tables and curves; determining the felling budget.

The programme of silvical study including reconnaissance for forest types—general description and silvical characteristics as exhibited by different species; detailed study of at least three types; reproduction studies in red pine, white pine, slash, etc.

This work was calculated to furnish the students with excellent practice in the important elements of forest field work. In addition it accomplished the following results: furnished a reconnaissance map of about 6,500 acres; a detail topographic forest map of about 250 to 300 acres, composed of individual 25 acre maps; a full forest description of the latter; an estimate of timber on each 25-acre lot, and, based upon this, a similar estimate for the 6,500 acres; volume curves for red pine and other species; growth rate tables and curves of red pine; yield tables for red pine; regeneration studies; a working plan for 6,500 acres for the above data.

#### Results of the Field Studies

This programme was carried out almost completely, and in addition, Dr. Fernow was able to attend the camp during the last three days and give the students instruction in silviculture. Of the work in general, some of the more interesting findings follow. The reconnaissance for the forest types indicated that the whole region had been under water probably at the time of the Nipissing Great Lakes in the glacial period. Clay was deposited during this time and later on sand was irregularly deposited over the clay. Numerous low rounded ridges of rock project through the soil. Based on differences of soil there are these three forest types distinguishable, (1) sand plain type, in which the red pine is confined almost exclusively to the higher and drier parts of this type. On the lower and moister

parts of this type hemlock, hardwoods, and white pine were more prominent. This was the principal type in which the students worked. It graded off into swamp type on the one hand and ridge on the other. (2) Swamp type consisting of clay soil. On this the association was principally balsam, black and white spruce, cedar, tamarack, hemlock and occasionally white pine. Swamps where drainage was more rapid, however, such as those by the sand creek, contained chiefly hardwoods such as ash and elm. (3) Ridge type, consisting of rock and talus on which there is either thin soil or none at all. The association on this type is of stunted Jack, red and white pine and balsam, red oak, etc.

The red pine wood in which there is also some white pine, is a densely stocked even aged stand of rather small uniform trees, through which are scattered much older and larger veterans. These latter are between 300 and 400 years old. Judging by fire scars to be seen on most of them they are survivors of various fires of the past. The last fire occurred around one hundred and fifty years ago. A combination of good seed crops on the veterans and seed bed favorable to germination and growth of the young red pine, led to the establishment at that time of the present younger stand. The average age of which is around 140 years. This stand is too densely stocked for good individual development. The poor sandy soil intensifies this. The average diameter breast high (4½ ft. from the ground) of the younger stand is only from 10 in. to 12 in. and that of the veterans from 18 in. to 26 in. The average heights were respectively around 80 ft. to 90 ft. The growth for the last fifty to seventy-five years has been very slow. The increase in value of the stand has been chiefly due to the increase in value of stumpage, not the increase in volume. Many of the trees showed as high as seventy and more rings of annual growth in the outside inch of wood at D. B. H., in other words, the increase in diameter of such trees for the last seventy years has only been two inches. Had the thinnings occurred while the crowns—the digestive organs of trees—were still vigorous, 70 to 100 years ago, larger individual development could have been secured. But that time has passed and the crowns are now incapable of responding to increased supplies of light and food. They are like people who have lived on restricted diet for so long a time that anything extra brings on dyspepsia. The shade under the mature trees is too dense for red pine production, consequently the reproduction in that part is nearly all white pine, stunted to be sure, which is more tolerant of the shade. On the 24-year-old slash, however, alongside of the old trees, where there is plenty of light, an excellent reproduction of red and white pine has sprung up with poplar, birch, maple, etc. Farther away from the old trees, however, reproduction of these desirable pines is uneven and poor, partly due to lack of seed trees.

Now, nearly all the soil of this region is non-agricultural and worthless except for tree growth. It is needless to comment on the desirability of obtaining a revenue from such a resource. A future crop means present reproduction and that in turn means a certain amount of care and protection—especially from fires. The loss and waste caused by fires was strikingly visible and tangible in the greater part of the ten square miles covered by compass and pacing reconnaissance survey. The mensuration studies in addition to showing the rate of growth, etc., furnished an interesting comparison of three log scales, the Doyle, Scribner and International. This comparison has been dealt with in detail in a separate article by Mr. A. H. D. Ross.

#### Details of a Working Plan

A working plan in connection with a timber limit furnishes a means of conducting the management of a forest property in accord-

Estimating Amount of Timber on a Given Tract—Photo by A. H. D. Ross

A Forestry Class in the Woods—Photo by A. H. D. Ross

ance with the desire of the owner. For a larger forest property a geometrical survey is necessary and desirable in order to establish boundaries, subdivides the area, plan roads and trails and furnish maps of the property. Mensuration studies, including quantitative surveys, tell the amount of timber by species and age or diameter classes; the rate of growth, how long before another crop can be secured; diameter limit which may be used in cutting, etc. Silvical studies except in detailed work, are generally combined with the mensuration studies. They correspond to a diagnosis of the health and living conditions of a community of people. They answer the questions; What is the condition of the trees? What is the food supply—light water, soil, etc? What are the chances for reproduction of desirable species?

It will be seen from the above outline of the work performed by the students that the two objects of the practice camp were accomplished, namely, to become familiar with the use of the various instruments and methods used in forestry work and to collect data for a working

plan in accordance with the lumbering operations. It will be readily realized by all who are engaged in the lumber industry that the information secured by the students in this manner comprises just that vital information which is of the utmost value to the owner and operator of the timber limit. The time was, when it was supposed that much of the work of this class was too theoretical to be of definite value to the lumberman. Of late years, however, the scientific and practical attainments of forestry students and graduates have dispelled this idea and their work to-day is not only highly appreciated but in urgent demand. In the early days of forestry studies at our universities, the problem of furnishing the graduates with employment was serious. To-day, these graduates are picked up quickly by the governments and by the large lumber operators and the supply of technically trained foresters to-day is much less than required by the various governments and individuals who are taking an interest in the scientific development and operation of Canadian forest resources.

# Preparation Red Pine Volume Tables

## How the Work is Performed by Students at a Forestry Camp—Interesting Data Secured in the Field

By A. H. D. Ross

During the month of October, last, it fell to my lot to have charge of the Toronto Forest School camp at Frank's Bay, on the south shore of Lake Nipissing and close to the head of the French River. The seventeen students in camp were given practice in accurate surveying with transit and chain and the running of levels; woods-surveying by less accurate methods, such as staff-compass and chain and box-compass and chain and box compass and pacing; reconnaissance surveys; the construction of volume tables; the cruising of timber by different methods; and the stem analysis of the commercial species of timber for the accurate determination of their rate of growth in height, diameter, volume, etc. Most of this work was done on lots 26 and 27, concessions XXI and XXII, in the township of Patterson, where an almost pure stand of red pine is being logged off, and it has been suggested that I give the readers of the Canada Lumberman an account of our method of constructing volume tables for this species.

A volume table gives the average contents of trees of given sizes, and may be either local or general. When the heights of the trees is practically the same for all the diameters included in the table it may be based upon diameters alone, but when there is a considerable range in height it should be based upon both diameter and height, to ensure accuracy. In each case the contents may be expressed either in cubic feet or in board feet. If given in board feet it should be definitely stated what log scale was used and to what minimum diameter the logs were taken, because otherwise the table would be of very little service.

Local volume tables are constructed for the purpose of estimating the amount of standing timber of a given species in a restricted locality, and usually under specified conditions of mixture, density, etc.; whereas general volume tables are based on the average volume of trees growing under a variety of conditions over a large region. Because of the irregularity of our forests in age, density and the form of the trees, it is generally advisable to use only local volume tables. If the timber is very uniform, as with most conifers, the table may be based upon measurements made upon 100 to 500 trees, according to the accuracy desired. Care should be taken to measure only trees that are representative in form, and no defective trees should be taken. Each tree should be a good representative of its class and there should be about the same percentage of one-log trees, two-log trees, three-log trees, etc., as ordinarily occur in the particular forest under observation—especially when only a hundred trees, or so, are measured.

### Age and Height of the Trees

In the case of the red pine being cut at Frank's Bay, the trees averaged about 90 feet in height and ten to twelve inches in diameter. Their age varied between 150 and 165 years and the stand is so dense that their volume has increased less than two per cent. per annum during the last forty years; but "that is another story," as Kipling says, and might easily furnish material for another article. The height of the trees being practically the same for all diameters and their taper being remarkably uniform, it was decided to base the volume table upon diameters alone. Each diameter was measured (outside the bark) at a point  $4\frac{1}{2}$  feet above the ground, to the nearest tenth of an inch. This height of  $4\frac{1}{2}$  feet is chosen because it is a convenient one for measuring and avoids the root swelling of all but very large trees. By following up the log-makers it was

an easy matter to secure the measurements required for our purpose. The calculation of volumes afterwards was made easier by recording the length of each log to the nearest tenth of a foot and its end diameters to the nearest tenth of an inch—most of the logs being taken down to five inch tops. The volume of each log was computed by means of Smalian's formula,  $V = \frac{1}{2} L (B + b)$ ; the stump being cubed as a cylinder and the unused top as a cone. On a sheet of cross-section paper the diameter of each tree was then plotted as an abscissa and its total volume as an ordinate. Through the band of points thus obtained a uniform curve was then drawn for the purpose of obtaining a good general average. From this curve the total volumes were then read off for each whole number of inches in diameter. A similar curve was then constructed to show the relation existing between diameters outside the bark, at  $4\frac{1}{2}$  feet from the ground, and the number of cubic feet of wood inside the bark, and the results were checked up by comparison with another curve showing the percentage of bark in trees of given diameters. The result of this study was as follows:—

Volume Table for Red Pine

| Diameter Outside Bark $4\frac{1}{2}$ feet from ground (Inches) | Total Volume (Cubic Feet) | Volume of Wood (Cubic Feet) | Percentage of Bark |
|----------------------------------------------------------------|---------------------------|-----------------------------|--------------------|
| 7                                                              | 8.5                       | 7.6                         | 10.5               |
| 8                                                              | 13.1                      | 11.8                        | 10.4               |
| 9                                                              | 18.1                      | 16.5                        | 10.4               |
| 10                                                             | 23.5                      | 21.1                        | 10.2               |
| 11                                                             | 29.4                      | 26.4                        | 10.1               |
| 12                                                             | 35.6                      | 32.1                        | 9.9                |
| 13                                                             | 42.0                      | 37.9                        | 9.8                |
| 14                                                             | 48.0                      | 43.4                        | 9.6                |
| 15                                                             | 54.0                      | 49.0                        | 9.3                |
| 16                                                             | 60.0                      | 54.6                        | 9.0                |
| 17                                                             | 66.5                      | 60.7                        | 8.7                |
| 18                                                             | 73.4                      | 67.2                        | 8.0                |
| 19                                                             | 80.6                      | 74.2                        | 8.0                |
| 20                                                             | 87.5                      | 80.8                        | 7.7                |
| 21                                                             | 97.2                      | 90.1                        | 7.3                |
| 22                                                             | 106.5                     | 99.2                        | 6.9                |
| 23                                                             | 117.0                     | 109.5                       | 6.4                |
| 24                                                             | 128.0                     | 120.3                       | 6.0                |

The curve for total volume was based upon the measurement of 115 selected trees, for the volume of wood inside the bark on 92 of them, and for the percentage of bark on 92 trees, so the above table should be quite accurate for the particular stand of red pine under consideration.

In constructing the volume tables showing the number of board feet in terms of specified diameters it was decided to compare the figures obtained by the Doyle, the Scribner and the International log scales. In scaling the logs, the diameters were taken inside the bark at the small end to the nearest inch, and all fractions of a foot were dropped from their lengths. The total number of trees scaled was 141 and their diameters ranged from 6.2 inches to 26.3 inches;  $4\frac{1}{2}$  feet from the ground. Separate curves were constructed for each of the above named log scales—the diameters being plotted as abscissae and the number of board feet in the logs from each tree as ordinates. As these three curves have been obtained from identically the same trees, a comparison of them exhibits in rather a striking

ing manner the importance of knowing what log scale is used for the construction of any given volume table showing the number of board feet in trees of given dimensions.

#### Comparison of Various Rule Results

| Diameter Outside<br>Bark 4½ Feet<br>from Ground<br>(Inches) | Doyle Scale | Scribner Scale | International<br>Scale |
|-------------------------------------------------------------|-------------|----------------|------------------------|
| 7                                                           | 6           | 21             | 30                     |
| 8                                                           | 13          | 42             | 57                     |
| 9                                                           | 24          | 65             | 88                     |
| 10                                                          | 40          | 87             | 121                    |
| 11                                                          | 60          | 111            | 155                    |
| 12                                                          | 83          | 136            | 190                    |
| 13                                                          | 111         | 164            | 227                    |
| 14                                                          | 141         | 195            | 270                    |
| 15                                                          | 175         | 232            | 317                    |
| 16                                                          | 210         | 275            | 368                    |
| 17                                                          | 252         | 325            | 430                    |
| 18                                                          | 302         | 383            | 505                    |
| 19                                                          | 360         | 450            | 585                    |
| 20                                                          | 427         | 510            | 685                    |
| 21                                                          | 500         | 600            | 790                    |
| 22                                                          | 585         | 700            | 915                    |
| 23                                                          | 700         | 810            | 1050                   |
| 24                                                          | 825         | 925            | 1200                   |

This volume table shows the enormous discrepancy that exists between the Doyle and International scales. In this connection it is interesting to recall the result of a mill test of the International Log Rule made during the summer of 1905 in a mill on the Ottawa River under ordinary commercial conditions. The test was made with 403 white pine logs of average quality, ranging in size from six to thirty-three inches. With a band saw cutting a kerf of one-eighth of an inch and an extra allowance of a sixteenth of an inch for shrinkage and uneven sawing, the theoretical scale for these 403 logs was 82,920 feet, board measure, and the actual product 83,288 feet—an over-run of the scale of four-tenths per cent. For the 6 to 8-inch logs the over-run was 2.6 per cent.; for the 7 to 9-inch 2.3 per cent.; for the 8 to 12-inch, nil; for the 12 to 18-inch, 5 per cent.; for the 18 to 24-inch, 2.1 per cent. In the case of the 10 to 17-inch logs the theoretical scale was 1.1 per cent too high, and for the 25 to 33-inch logs .5 per cent. too high. For the whole run of logs, however, the International scale was almost identical with the actual product in inch boards. As the red pine being cut at Frank's Bay is exceedingly sound and straight I am confident it will saw out even more than the scale indicated by the International log rule and should very much like to see a test made to either prove or disprove the accuracy of my statement.

#### Hearing on Canadian Freight Rate Increases

Hearing of the protests of Southern lumbermen against the proposed increase in freight rates on lumber and timber products from the Southern States to points in Canada was begun Monday, December 16th, before Interstate Commerce Commissioner B. H. Meyer, at the Planters' Hotel, St. Louis, Mo., and was adjourned after two days' sessions to be resumed January 24th, at Cincinnati, Ohio.

It was believed that the session could be concluded at the St. Louis hearing, but, on account of the interest taken and the large number of witnesses to be examined, this was found impossible. A notice of the proposed increase was filed with the Interstate Commerce Commission a month ago, but, because of the spirited objections of the lumbermen, the commission ordered a suspension of its effectiveness until December 30th.

H. C. Martin, Montreal, general freight agent of the Grand Trunk Railroad, and H. F. McDermott, general freight agent of the Canadian Pacific, appeared for their roads. Mr. Maftin testified that the Grand Trunk and Canadian Pacific lines would not gain anything in revenue by the proposed advance. The advance in the lumber tariffs of these lines, which is held responsible for the increase on other roads, Martin attributed to an inequality in rates in Canada, about which complaints had been made to the Canadian Railway Commission. He said the rates were raised to forestall action by the Canadian Commission.

The question of the percentage of the tariffs received by the Canadian roads on through shipments of lumber, Martin refused to go into, telling Luther H. Walker, Chicago, representative of the Yellow Pine Manufacturers' Association, the question of division "was none of his business." Martin volunteered the statement that threats had been received from other railroads that if the Canadian lines persisted in their attempt to revise the rates they would be punished by not receiving any of the New England business they now handle.

The proposed increase in rates is from 1 to 7 cents on the hundred-weight, and would raise the price of yellow pine shipped to Canada not less than \$4.50 a thousand feet. Mr. Martin testified that the proposed advance in rates would not increase the revenues of the Can-

adian roads, as several reductions are made in the new schedule, as well as advances.

E. H. Dulaney, assistant third vice-president of the Louisville & Nashville Railroad, testified that the through rates of the Louisville & Nashville to Canadian points were cancelled August 18, 1911, on account of the advance in the arbitrary rate of the Canadian Pacific to points in Canada west of Montreal.

Mr. Dulaney said that he understood that the Canadian Pacific advanced its rates, not to increase its revenue, but to prevent action by the Canadian Railways Commission. He admitted that the present rate to Cincinnati from Mobile, Ala., over the Louisville & Nashville was 16.6 cents a hundred, while the percentage on through business to Canadian points under the suspended tariff would be 20.5 cents, an increase of 3.9 cents over the rate now received. The present rate to Toronto, he said, was 33 cents, while the suspended rate was 34 cents, the extra cent going to his road.

The examination of Mr. Dulaney showed that in several other instances the tariff under the suspended rate would net the Louisville & Nashville less than the present rate.

The suspension order of the Interstate Commerce Commission applying to proposed advanced lumber rates from Tennessee, Mississippi and other producing points to points north of the Ohio River and to Canadian destinations has been extended from December 30, 1912, to June 30, 1913. This marks the limit of the suspension period under the law. The rates referred to were originally suspended from September 1st until December 30th.

#### Free Lumber Indicated for United States

The House Committee of Ways and Means of the United States Congress heard evidence on January 12th in connection with the tariff on wood products. The duty of this committee will be to take evidence in connection with the tariff on all classes of goods and to report to an extra session of Congress which will then take its own action upon the matter. It is important to note, however, that according to the evidence taken on January 12th there were strong indications that the committee will recommend the removal of the tariff on rough and dressed lumber, hewn and squared timber, shingles, lath and fence posts. It was apparent from the evidence presented that the direction of the report of the committee will be towards securing more revenue from luxuries and easing the tariff on necessities.

#### B. C. Lumbermen Want Protection

A joint meeting of the Coast and Mountain Lumbermen of British Columbia was held at Vancouver recently, at which the opinion was unanimously expressed that efforts should be made to secure tariff protection for the Canadian lumbering industry. Reports were submitted showing that United States manufacturers were continuing to dump their surplus products in the markets of Canada and that stocks in British Columbia yards at the close of the year aggregated 340,000,000 feet. Emphasis was laid by the various speakers upon the fact that the lumber industry is the largest in Canada and that it does not enjoy any protection.

Mr. H. R. MacMillan, chief of the Forestry Branch of the Department of Lands of British Columbia, addressed the meeting upon the question of protecting the forests from fire. He emphasized the necessity for active co-operation between the forestry staff and the lumber interests. An interesting discussion followed his address, the result of which was a decision to send a memorial to the Provincial Government in favor of enlarging the staff of the forestry department so that it might include two lumbermen, one from the coast and one from the interior. The memorial will point out that these two ex-officio members will not be expected to act in any but an advisory capacity, leaving the administrative work to the other members of the board. It is believed that the practical experience of the lumbermen will be of great benefit to the board and to the permanent officials. The memorial also urged that appointments of the fire protection staff be made solely upon merit. Similar recommendation will be made to the Dominion Government in regard to the selection of fire wardens and assistants in the railway belt.

#### Eastern Lumber Dealers Permanently Enjoined

The United States District Court has granted the government's petition for a permanent injunction against the Eastern States Retail Lumber Dealers' Association, the New York Lumber Trade Association, the Building Material Men's Association, the New Jersey Lumbermen's Protective Association, the Retail Lumbermen's Association of the State of New York, the Retail Lumbermen's Association of Baltimore, the Lumber Exchange of the District of Columbia and their members. The government's petition was filed in 1911 and alleged that the defendants were engaged in an agreement in restraint of interstate trade, in arbitrarily fixing prices, by fines, expulsion from membership and other methods. Final arguments for and against the injunction were heard a few weeks ago.

# Pulpwood and Paper

IMPORTANT DEVELOPMENTS OF INTEREST TO PAPER MANUFACTURERS

## Quebec Pulpwood Restrictions Removed

The Province of Quebec has removed its restrictions on pulp wood cut on its Crown lands, so far as the following manufacturing companies are concerned: The Laurentide Company, of Grand Mere; the Belgo Canadian Company, of Shawinigan Falls; Price Brothers & Company, of Kenogami, and the Wayagamack Pulp and Paper Company, of Three Rivers. This move is made so as to allow these companies to meet the terms of the reciprocity law of the United States so that they can send paper and pulp to that country duty free. These companies, with their large plants, are naturally induced to turn all their wood into paper, so as to make as much profit as possible. The effect of the change, therefore, is simply to place these companies in a position to export their paper and pulp into the United States without payment of duty.

In connection with the above report it is of interest to note the quantity of Canadian paper exported to the United States during 1912. News print was imported into the United States during October, for instance, to the extent of 21,593,319 pounds, as compared with 10,207,354 during the same month of 1911, and 21,983,897 pounds during September. Of the total, Canada's share in October was 16,234,336 pounds, as against 5,687,473 pounds during the corresponding month of 1911. During the ten months ended October 31 the imports of print paper aggregated 131,986,623 pounds, as compared with 98,605,780 pounds in 1911. Of this quantity Canada's share was 127,269,842 pounds in 1912 and 92,147,734 pounds during 1911. It is interesting to note the imports of the same grade of goods from the Dominion during each successive month during the year 1912. The figures indicate that as the months go by the imports materially increase, due most naturally to the gradual additions to the finished mill equipment over the Northern border.

|                 | Duty Free,<br>Pounds. | Subject to<br>Duty. Pounds. | Total<br>Pounds. |
|-----------------|-----------------------|-----------------------------|------------------|
| January .....   | 6,031,202             | 3,705,476                   | 9,736,678        |
| February .....  | 5,256,585             | 3,191,145                   | 8,447,730        |
| March .....     | 6,900,602             | 2,591,861                   | 9,492,463        |

| August .....    | 10,853,665            | 3,812,470                   | 14,666,135       |
| September ..... | 16,699,747            | 4,999,590                   | 21,699,337       |
| October .....   | 16,234,336            | 4,789,462                   | 21,023,798       |

According to the officials of the Lands, Forests and Mines Department of Ontario, no approach has as yet been made to the Ontario Government for the removal of the export restriction on pulpwood cut on Crown lands. "In British Columbia and Quebec," said an Ontario official, "the disadvantage of competition with unrestricted pulp derived from private lands has been overcome in the first case by statute, and in the case of Quebec, by order-in-council. This relaxation of the export restriction, which itself was designed to enforce the manufacture of pulpwood into paper within the confines of the respective provinces, has been made with the desire to avoid the clause in the American tariff which discriminates against paper entering the market of the United States, manufactured from pulp from lands on which there is an export restriction. While paper derived from private lands enters the United States free of duty, upon the product of the Ontario mills manufacturing Crown lands pulp, there is a duty of \$5.75 a ton. Quebec, following the example of British Columbia, has evaded this disadvantage in the American market, for the paper made from the Crown lands pulp, by exempting from the export restriction certain specified parcels of land, from which the chief provincial paper mills get their raw material, as the manufacturing was being done in the province, and the intention of the Act already secured. It is hoped, thus, that the American Customs authorities will be induced to relax their discriminating tariff charge, especially in view of the ardent desire of the American Publishers' Association, as witnessed by their recent deputation to Premier Gouin, to get Canadian paper at the cheapest possible cost. Pulp in the Eastern States is getting scarce, and the owners of pulp lands comparatively adjacent to the centres of population show a disposition to hold on to their limits as long as there is any competition of cheaper pulp from other sources, waiting for the inevitable rise in price which must come when the other available forests are exhausted. The true balance between supply and demand will only be struck when the agricultural

lands of this country are all cleared, and the pulpwood forests reduced to definitely known areas to be permanently conserved and cropped under scientific administration."

## Good Pulpwood in Northern Quebec

The Provincial Government last summer sent several parties to study the natural resources in the region to the south of James Bay, which is soon to be opened up by railway companies. The report of one of these parties, which was in charge of Dr. J. A. Bancroft, of McGill University, Montreal, has just been published. It deals with the natural resources of portions of the basins of the Nottaway, Harricanaw and Bell rivers. In these basins, the report states, there is a tremendous wealth of pulp wood. The timber consists mainly of black spruce, white spruce, jackpine and balsam. While most of this is of the pulp wood size, there are some areas of large timber, trees of 32 inches in diameter being noticed. The water powers are numerous and large. At Iroquois Chute the whole of the Nottaway River takes a sheer drop of 35 feet, and below Kelvin Lake there is a succession of rapids giving a drop of 130 feet. Many other powers are also mentioned.

## Larch Sawfly Destroying Pulpwood Trees

Holders of pulp wood limits in certain sections of Quebec province have been making great complaint during the past season of enormous damage done to standing timber by the depredations of certain kinds of flies and bugs, and particularly the large larch sawfly which attacks and kills spruce and pine trees. The Dominion entomologist, C. G. Hewitt, who has recently been conducting investigations into the ravages of this pest, states that in certain large districts it has destroyed from 50 to 100 per cent. of the tamarack and hackmatack trees, while J. Fletcher, an experienced observer, states that since its first appearance in 1882 it has caused the destruction of larches over millions of acres of land, particularly wiping this tree out in many large sections of eastern Canada. For a time the sawfly almost disappeared, but in 1909 and 1910 it was seen that the tamarack trees along the railway line had been stripped of foliage all the way from New Brunswick almost to Winnipeg. This year not only has it been doing much damage in Quebec, but it has been seen in Saskatchewan almost as far west as Blatchford, while engineers and surveyors report having seen much devastation by it from James Bay eastward to Labrador.

In view of the importance of destroying this pest, the Department of Agriculture has now issued a pamphlet on the subject, but the pamphlet admits that human agency can do little to check the ravages of the insect, except by fostering the parasites of the fly. The larch sawfly is rather attractive in appearance, with a band of red around the after part of its body, and wings marked by yellow and brown geometrical figures. It is about the length of the familiar "blue-bottle." The eggs are deposited in the tender shoots of the trees. The twig either dies or is permanently injured and distorted. The larvae in turn devour the foliage, and when they are numerous completely strip the tree. This process weakens the tree, and makes it liable to suffer from other parasites, which complete its destruction. The natural enemies of the sawfly are stated to be the field mole or meadow mouse, and the white footed or deer mouse. Many species of birds also feed on the larvae, including the crow. The lesson is again that the wild bird is one of man's best friends. Other insects also prey on the sawfly in its various stages, and experiments have been made in the introduction of *Mesoleius Tenthredinis* at the experimental farm at Ottawa, at the Algonquin National Park and at Ste. Agathe, immediately north of Montreal. The result is regarded as promising.

## Continued Progress in Newfoundland

Mr. W. M. Taylor, who was for many years connected with the Crown Lands Department of the Newfoundland Government, in the course of a recent interview in Montreal, referred to the enormous development of the pulp and paper industries of that country. This development, he said, had been so rapid that the problem of securing sufficient labor will soon be acute. Emigration has made a great drain on the population of Newfoundland. The people have left for the New England States in thousands, and unless something is done to encourage repatriation and immigration, industrial development will be hampered for want of sufficient labor.

The extent to which United States concerns have secured timber limits in Newfoundland, says Mr. Taylor, does not seem to be fully

recognized. "At the present time three-fifths of the entire timber limits in the country are under United States control, and new companies are beginning operations. An English company, however, is opening up at Baie du Nord, and the Anglo-Newfoundland Development Company, in which Lord Northcliffe has a large interest, already employs about eleven hundred men." The operations of that company have shown "that destructive as is the forest fire, the wood may yet be put to good service. I should say that probably one-half of the company's pulp is made from burnt wood which used to be regarded as of absolutely no value."

### Wood Pulp Advancing in Norway

A report received from the Canadian Trade Commissioner at Christiania by the Minister of Trade and Commerce, indicates that the price of the raw material—wood—is advancing in Norway and Sweden, and that United States users of pulp are seeking to make contracts for 1914 and 1915.

"The value of mechanical wood pulp," says the report, "has gradually hardened and is to-day nearer \$9.87 than \$9.67 f.o.b. both for prompt and for delivery over next year, and we understand that a fair proportion of next year's output in Norway has already been disposed of. Cellulose is also steadily advancing; for strong sulphate \$37.87 has been obtained, and makers are holding out for \$40 for strong sulphite, while easy bleaching sulphite is tending toward \$42.67 f.o.b. This would be good news for shareholders in Norwegian cellulose mills after several years of unprofitable trading if the cost of production did not tend to advance quite as rapidly as selling prices. But the enormous rise which has taken place in freights has put a full stop to the importation of logs from Russia, and the mills which relied upon this source of supply have been compelled to compete fiercely for Norwegian logs, with the inevitable result of driving prices up against themselves."

Of the Swedish situation the report says: "The pulp market is very firm for all kinds, as the mills now have very nearly disposed of their entire production for 1913. In England the consumers seem to be well supplied, but from the United States there is a very lively inquiry and from that country it has even been tried to contract for 1914 and 1915. The Swedish quotations are at present per ton net, f.o.b.:

|                                              |                  |
|----------------------------------------------|------------------|
| Mechanical, moist white . . . . .            | \$9.33 to \$9.67 |
| Mechanical, dry white . . . . .              | 20.00 to 20.90   |
| Sulphite, prime light, bleached . . . . .    | 40.00 to 41.23   |
| Sulphite, dry, strong bleached . . . . .     | 37.33 to 38.67   |
| Sulphate, light bleached, ordinary . . . . . | 34.67 to 36.67   |
| Sulphate, strong bleached . . . . .          | 34.67 to 36.67   |

### To Handle Canadian Pulpwood

G. E. Van Kennen, J. C. Howard and S. L. Dawley, of Ogdensburg, N.Y., went to Watertown recently to confer with paper manufacturers in regard to establishing a pulp wood terminal in Ogdensburg. They appeared to be very favorably impressed with the scheme and there is a strong feeling that eventually it will go through. The paper manufacturers would like to see a pulp wood sales company organized in this city for the purpose of taking out of the hands of the various companies the handling of pulp wood brought from Canada. The idea is to bring the pulp wood from the St. Lawrence, unload it at a terminal probably located west of the city on the line of the Central, and then tranship it by rail to the different paper mills. It is claimed that this method would not only be a great convenience to the manufacturers, but would effect a saving through lower freight rates obtained by the water haul.

### First Ontario Car of Poplar for Pulp

The first car of poplar for pulpwood purposes was shipped out of Temiskaming, Ont., recently, consigned to a pulpwood company in Johnstown, Pa. The car was the first of 22 that will go to the same place. It will be treated by a new process which makes the wood valuable for paper-making, and which will greatly enhance the value of lands in Northern Ontario. Four dollars a cord is now being paid for poplar cut for pulpwood, while \$5 is the price for spruce cut for the same purposes. The timber on thousands of acres of Northern Ontario land is poplar, which has been good for no purpose at all except firewood, and then only after it has been carefully dried. The new process is likely to prove a godsend to the settlers who have selected poplar-timbered lands because they are easy to clear.

Stocks of news print paper in the United States on November 30th, 1912, according to reports of the American Paper and Pulp Association to the Commissioner of Corporations, were 43,504 tons, a decrease of

3,007 tons from October. Stocks November 30th, 1911, were 38,650 tons. The decrease was largely due to heavy shipments during November, these being 109,801 tons. Production was 106,715 tons, a decrease of 2,249 tons. The production was 94 per cent. of the computed normal, against 97 per cent. in November, 1911. The average actual daily output was 4,104 tons, against a computed normal of 4,366 tons.

### Calendars and Souvenirs for 1913

Joseph Bedard & Sons, lumber dealers and general merchants, Richmond, Que., have sent to their friends an attractive calendar, the illustration on which is a black and white reproduction of a picture entitled "The Forest Pool." The calendar is simple and at the same time exceptionally attractive.

F. H. Hopkins & Company, dealers in railway contractors' and mining supplies, Montreal, have favored the Canada Lumberman with a large and useful calendar for the year 1913. F. H. Hopkins & Company have branch offices and warehouses at Winnipeg and Vancouver, and carry a complete stock of all lines of supplies.

West & Peachey, Simcoe, Ont., manufacturers of the widely-known alligator steam warping tugs, have again sent out to their friends a large calendar with a colored illustration giving an excellent idea of the work for which their tugs are designed. The illustration shows one of the tugs towing a boom of logs and another pulling itself over a bit of very rocky shore.

Knowles & O'Neill, dealers in lumber, pulpwood, ties, etc., Hochelaga Bank Building, Quebec, P.Q., have sent to their friends an attractive calendar for the year 1913. The calendar is decorated with an attractive reproduction of the painting by Carl Kahler, entitled "The Winners." The picture is an excellent portrayal of two splendid horses' heads with a beautiful girl standing between them, whose head is entwined by the blue ribbon which has been won by the horses.

The Joseph Dixon Crucible Company, Jersey City, N.J., sent to their friends at New Year a souvenir which will be long remembered by those who were fortunate enough to be included among their friends. Instead of the usual calendar or Christmas card they have favored their friends with a splendid assortment of lead pencils and erasers, neatly put up in a large box, the whole presenting a very attractive appearance and being unusually suggestive of Christmas and New Years.

Graddon & Owens, lumber and timber merchants, 11 St. Sacrament street, Montreal, have selected a most attractive picture to illustrate their calendar for the year 1913. The title of the picture is "The Forest Giants," and it represents a scene in the woods showing a number of large hardwood trees. The sunlight is filtering through the trees in long streaks and lighting up the leaves. The illustration is a reproduction of the photograph and is printed in two colors. The calendar pad is neat and in keeping with the general scheme of the picture and mount.

A handsome calendar has been received from Geo. Gordon & Company, Limited, Cache Bay, Ont. The subject of the picture is "Life's Sweet Summertime," reproduced from the original painting by Miss Zula Kenyon. The picture represents a young mother and her two children, accompanied by the former's younger sister, sitting on the cliff overlooking the sea. The mother has put down the book she is reading and is dreaming of the future of her children, who are playing at her feet. The size of the picture and calendar is about 3 ft. 6 in. by 2 ft. 4 in. and it will make a pleasing and useful adornment for any wall.

John Donogh & Company, wholesale dealers in white pine, red pine, hemlock, spruce, shingles and lath, Traders Bank Building, Toronto, have issued one of the most attractive and unique calendars for the year 1913, that we have been fortunate enough to receive. The calendar contains a series of illustrations in color, showing the different operations in connection with the harvesting of a crop of logs. The pictures are all extremely typical of the various operations, including scenes in the woods and on the drive. The centre of the calendar contains a striking picture of a log cutter. The calendar pad is large and the figures are in type of a size which will be easily seen across a large office.

A sample of Brazilian walnut which was recently received at London, Eng., met with quite as much attention as is usually given to a new wood, some of it realizing 5s per cubic foot, and since the sale the brokers have disposed of no insignificant quantity privately. In many respects the wood justifies its trade name of walnut, being uncommonly handsome and an efficient substitute for the genuine article. One sample had all the characteristics of a walnut burr, and would test the powers of an expert in walnut to no small degree to detect that such was not actually the case.

# Logging by Railroad in Quebec Limits

**Transportation Problems Solved by Railway Tracks, Geared Engines and Steam Loaders—The Fassett Lumber Company's Operations**

Logging is principally a problem of transportation, and though there are other important expenses, the greater the saving that can be effected in getting the logs from the limits to the mills, the greater will be the profits at the end of the season. With hardly any exception, at least in Eastern Canada, the logs are transported to the mills by water, often taking a year and even two years in the process and eating into the profits of the lumbermen.

An interesting exception to this method of transportation is afforded by the case of the Fassett Lumber Company, Limited, of Fassett, Que., who conduct their logging operations exclusively by rail and have a system of transportation the equal of which is rarely found in connection with sawmill operations.

The Fassett Lumber Company's mill operations are located fifty miles east of Ottawa and seventy miles from Montreal on the north side of the Ottawa River, in the County of Labelle. The limits are situated about twelve miles inland on the Salmon River in what was originally known as the old Papineau Seignory. The area of the limits is 68,000 acres or about 100 square miles, which is splendidly timbered with pine, hemlock, spruce and cedar in the soft woods, and birch, maple, oak, beech, basswood, elm, ash and butternut in hardwoods.

Twenty-five miles of railroad, including the different switches to the various parts of the limits, connect the limits direct with the mills. The main line of railroad runs up through the eastern part of the limits and from it switches branch off which are built annually into that part of the forest in which the year's operations are to be carried on. Three Shea-geared Lima Ohio engines, one of 55 tons, one of 65 and one of 70 tons, in addition to one saddle-tank switching engine of 25 tons and two Barnhardt steam loaders, 60 log cars and 26 flat cars comprise the rolling stock of the company, and it is in operation daily, year in and year out, between the limits and the mill. By the use of this railroad and a hot pond 400 x 150 feet, adjacent to the saw mill, which is kept open during the winter months by exhaust steam from the mill, the company are enabled to carry on their operations throughout the year. On January 13th their mill started running double shift and for the balance of the season will cut hardwood night and day. During the winter season one engine is kept in the woods to handle the two steam loaders, while the other two engines, each handling 22 cars, are kept coming and going continuously. Each of the loaders handles 65,000 feet per day.

## Cutting and Skidding by Contract

The Fassett Lumber Company look after logs only from the railroad at the bush. The cutting of the logs and the skidding is done by contract, a set price being fixed at the beginning of the season. This is a great advantage, as it does away with the necessity for a supply store, the hiring of men and the employment of a big office staff, which is always required by logging operations. In this manner the company secure the distinct advantage of knowing just how much the logs are costing from the time they are cut until they arrive at the mill. During the present winter six large camps and several small camps are being operated by the contractors with over 250 men. A cut of over 25,000,000 feet will be taken out. The cut this

A Skid containing about four million feet of logs on Fassett Limits

year is being secured from a westerly part of the limits about three miles from the main line of the road. A switch is now under construction which will reach to within a mile of the heart of this section of the limits. The contractors cut the logs and skid them the short distance to the switch where their work ends and the logs are taken in charge by the lumber company. This section will be completely cut over before operations upon it come to an end. Even the small stuff will be taken, a market for it being found with the chemical company operating at Fassett. When this section has been completed a move will be made to another section and another switch will be placed as before. Constant inspection of the limits is made by the superintendent of the logging department, Mr. C. H. Haxton, a man who has had many years of experience in the logging business. Mr. Haxton was formerly connected with the Goodyear Lumber Company for a number of years. As to Mr. Haxton's ability to travel the limits rapidly and observe all that is going on about him, a representative of the Canada Lumberman can give eloquent testimony, as a result of a trip recently made through the woods in his company. The limits of the Fassett Lumber Company are thickly wooded with a splendid quality of timber. The stand of hardwoods is extensive and during the present season a large quantity of various classes of hardwoods will be taken out.

## Cheapness and Other Advantages

The method of operation followed by the Fassett Lumber Company is cheaper, they claim, than the old method of driving the logs down river. In fact they claim that it reduces the cost of operation materially. In addition to this, operation by railroads has the advantage that it enables the company to clear hardwood and soft wood at the same time. An additional advantage is, that by operating

One of Fassett Lumber Company's Camps

A Sample of the Fassett Limits—Logging Sup't, C. H. Haxton in Foreground

all the year round at the mill, the company are able to saw hardwood which is not water stained in winter. The method of manufacturing hardwood adds greatly to the quality of the timber. A further and most distinct advantage of operating by railroad is that the company are able to market their lumber much quicker. Moreover, special bills of long timber can be furnished readily. In fact, any quality can be secured from the limits and cut to order in a few days.

The Fassett Lumber Company's officers have long been connected with the lumber business. The president is Hon. J. Sloat Fassett, vice-president of the Second National Bank, Elmira, N.Y., who has long been successfully identified with lumbering operations in the United States. Mr. A. E. Edgecomb, Knoxville, Pa., is vice-president of the company, and Mr. Harry S. Thayer, Elmira, N.Y., secretary-treasurer. The manager of the business at Fassett is Mr. J. R. Collins, a native of Pennsylvania, who has had a life-long experience in the lumber business in the United States and as a result of whose successful management much of the remarkable growth of the Fassett Lumber Company has been brought about. Mr. Collins is ably assisted by Mr. S. J. Staniforth. On January 20th Mr. J. R. Collins with Mrs. Collins will leave for Tampa, Florida and other Southern points for a two months' vacation, and the entire management of the company will be left in the hands of Mr. S. J. Staniforth.

## Personal News and Trade Paragraphs

J. G. Robson, president of the Timber Land Lumber Company, New Westminster, B.C., has been appointed vicegerent snark of Western British Columbia. Mr. Robson expects to hold a concatenation in February.

Mr. E. W. Tobin, member of Parliament for Richmond and Wolfe, who is connected with several lumber enterprises in the Province of Quebec, is suffering from pneumonia. He was taken ill at Levis while on business.

Mr. Norman Beveridge, who has for five years been associated with the New Brunswick Pulp & Paper Company's plant in Millverton, N.B., has severed his connection with the firm. Recently he was waited upon by the employees and staff of the mill and presented with a very handsome gold watch and chain.

A report from Chatham, N.B., says: The J. B. Snowball Company, Limited, has closed out for cash its entire stock of sawn lumber for the English market, now lying on the wharves on the Miramichi, to Messrs. Frank Harrison & Company, of Liverpool, England. Mr. F. E. Neale, the representative of the latter firm, came from Montreal to complete the deal. The quantity is close to eight million feet, valued in the vicinity of \$115,000.

The C. G. Anderson Lumber Company of Toronto, wholesale lumber dealers, have moved from the first floor of the Manning Chambers to larger offices on the second floor of the same building. Mr. Anderson reports a very successful year for 1912, and states that they are going after business on a still larger scale the coming year. Mr. Anderson has had many years of experience in the lumber business in Canada, and his many friends in the trade will be glad to learn of his continued success.

Messrs. Churchill & Sim, London, Eng., advise us that their partnership expired by effluxion of time on the 31st ult., and that Mr. Alexander B. Sim and Mr. Frederick E. E. Elliott, who have been for some

time sleeping partners, finally retired from the firm on that date. Their Senior, Mr. Charles T. F. Churchill, also retired. The business will be carried on by the remaining partners: Mr. C. S. Gordon Clark, Mr. Thomas G. Sharp, Mr. A. Chatterton Sim, and Mr. Herbert G. Sharp; and they are admitting into partnership in their softwood department, Mr. William C. Mann, who has for many years been one of the managers of their Swedish business, and in their mahogany and hardwood department, Mr. Walter J. Sharp, who represents them in Liverpool.

### From Manager to Company Head

A report from Vancouver, B. C., states: E. E. Brooks, who has been sales manager of the Adams River Lumber Company, has left that company to organize the Brooks Lumber Company, which will have headquarters in Vancouver and will carry on a general wholesale trade. The position vacated by Mr. Brooks will be filled by W. F. Lammars, the present mill superintendent. Mr. Brooks is interested also in the Brooks-McKenzie Lumber Company, doing a retail business at Penticton, on Okanagan Lake. He is a man with much experience, and was one of the first four regular traveling salesmen from the Pacific coast who did missionary work in introducing Coast lumber through the Missouri River territory in the early nineties. In 1889 he represented in Seattle F. H. Lowton & Company, San Francisco; in 1892-93 he was with J. W. Godwin & Company, a commission firm of Seattle; then he sold shingles for Ferguson Brothers, of Latona, Wash., and following that was four years with the Seattle Cedar Manufacturing Company. He then joined the McGoldrick Lumber Company, of Spokane, acting as salesman in Colorado, Wyoming and Nebraska, at the end of five years being transferred to Chase, B.C., as sales manager and assistant manager of the Adams River Lumber Company.

### Reorganization of Ocean Falls Company

A London syndicate has taken over the holdings of the Ocean Falls Company, Limited, the \$6,000,000 pulp mills, saw mill and town site company, which has built a new plant on the main land, 375 miles north of Vancouver, B.C. Lester W. David, well known in Seattle, who was one of the moving spirits in the organization of the company, has disposed of the larger part of his holdings. The London financiers who have taken control announce an entire change of officers and board of directors. The new management began the manufacture of pulp January 1st. I. Hamilton Been, of London, is the new president of the Ocean Falls Company, Limited, with A. B. Martin, managing director of the plant, and A. E. Millington, managing director at Vancouver, B. C. Mr. Benn was at the Hotel Washington yesterday. He left for the east recently. A. E. Millington, who will be managing director, with headquarters at Vancouver, was formerly manager of the Spanish River Pulp and Paper Company, and has an enviable record of success in the pulp and paper industry. Mr. Martin, who is managing director at the plant at Ocean Falls, is well known on the Pacific Coast. The new plant at Ocean Falls, on which the stockholders of the company have spent nearly \$3,000,000, operated a short time last August, but suspended operations during the reorganization, which is now completed. The pulp will be marketed on the Pacific Coast, in Australia and in the Orient. Price & Pierce, Limited, of London, well known as timber merchants, will handle the entire sales of the plant. The main offices of the sales managers are in London, but they have branches, in Liverpool, Glasgow, Manchester, New York, Vancouver, B. C., and Seattle. The Seattle offices are located in the White Building and are in charge of Allan Daugharty, who has a wide acquaintance in the lumber trade. The Ocean Falls Company, which has built its plant on Cousins Inlet, 375 miles north of Vancouver, has developed a waterfall capable of generating 24,000 horse power. The pulp mill and lighting systems will be operated by the power produced by the falls, while the lumber mill will be run by steam. The company has one of the four pulp concessions granted in British Columbia. It has 80,000 acres of fine spruce timber, stores, hotels, town sites and dwellings at Ocean Falls.

### Logging on the Upper St. John

Application is to be made to the State of Maine legislature this year to have the upper St. John River as far up as the mouth of Baker Branch incorporated for log driving purposes. An effort to secure similar legislature was made last year, by the St. John River Lumber Company, but met with failure. This year it is expected that the company's efforts will prove successful as some of the interests which opposed the legislation last year will take no part this time. That the St. John Lumber Company apparently feel confident that they will secure the legislation is evidenced by the fact that the company have made contracts with their operators here to take over their logs next year at the landings and do the driving themselves, feeling that the work can be carried on more cheaply if all the logs are driven together.

Contracting the Logging Railway Roadbed

# Market Correspondence

SPECIAL REPORTS  
ON CONDITIONS AT  
HOME AND ABROAD

## Bright Prospects for Montreal Trade

Montreal, January 8th; (Special correspondence of the Canada Lumberman).—The New Year opens with the brightest prospects so far as the lumber trade of Montreal is concerned. The past twelve months have established a record in building operations, the permits for December of \$684,675, making a total for the year of \$19,641,955, as against \$14,579,952 in the previous year. Taking into account municipal and harbor buildings, miscellaneous, etc., there was a total of \$26,116,955. As far as can be judged, this should be exceeded during the current twelve months, as there are many important building projects, particularly in the way of ten-storey structures and apartment houses, under consideration, and it will be necessary to put some thousands of flats and houses up if the demand is to be met adequately. It is difficult to obtain houses even now, and those that are built are immediately let.

Wholesalers and retailers state that business is keeping up very well, the demand for lumber being stimulated by the open weather which continued until the close of the year. At this time of the year most wholesalers are comparatively quiet, but reports show that during December business was considerably ahead of the corresponding month of the previous year. Stocks are reported to be low.

There is not much change in the pulp and paper situation. Ground wood continues at low prices, the condition of the streams in the United States being favorable for domestic production, and consequently the demand for ground wood from this side is still small.

In chemical pulp there is a considerable shortage in the United States, especially in the higher grades, and appearances point to a still further reduction in supplies as the winter advances. Shipments from Europe will certainly decrease, and the high rates of freight are an adverse factor in this section of the market. With this reduction, it looks as if prices will continue on a high level for a long time to come.

Although the Quebec Government has decided to abolish the restrictions on the Crown lands of Price Bros., the Laurentide Company, the Belgo Company, and the Wayagamack Company, it is extremely unlikely that any of the wood will be exported to the United States—there is too great a demand for it on this side. It may be that, as the companies now have the unfettered use of wood from Crown lands, they will manufacture more paper from this class of pulp wood, which will leave additional private lands' wood available for export to the United States. On the other hand, it is pointed out that the companies have long been using Crown lands' wood, and that they will continue to do so, buying also, as in the past, whatever they require from free lands, so that the only difference due to the removal of the restriction will be that the companies will be relieved of the duty which the United States have hitherto put on paper made from Crown lands' pulpwood.

Mr. William Rutherford, of William Rutherford & Sons Company, Limited, Montreal, has been nominated as the representative of the lumber and mill interests on the board of the Montreal Builders' Exchange.

## Increasing Activity in Cape Breton

Sydney, C.B., December 30, 1912; (Special correspondence of the Canada Lumberman).—Cape Breton, N.S., is not naturally a lumbering country, but the ever-increasing local demand has led quite a number to attempt operations in a small way. The most prominent of these is Chappell Brothers & Company, Limited, who carry on a wood-working and contracting business with headquarters in the city of Sydney. For several years they have been cutting annually about three million feet of small lumber and about two millions of lath at the head of Sydney Harbor and have recently started another operation on the upper part of Mira River, which will produce about one and one-half millions yearly. Mr. C. A. Fownes and Mr. W. E. Dryden are the next heaviest producers. They operate on the Bras. D'Or Lakes and cut about two million feet each annually.

A large number of portable mills are being started throughout the Island which help to supply the local demand, which is becoming larger every year.

The Dominion Coal Company, the Dominion Iron & Steel Company, and the Nova Scotia Steel Company, are heavy consumers. The demand is good and taking into consideration the fact that practically one and one-quarter million dollars is being paid out every month for wages alone, within a radius of twenty miles of this city, it is natural to expect that it will be good for some time to come.

Chappell Brothers at St. Omer, P.Q., on the Bay Chaleur, report a fine season for skidding, so far they have had very little frost or snow, their limits being firm dry ground have not been effected by

the wet open weather as many others have. They counted on getting out a cut of six millions and are now ahead of their estimate for this date. This firm is closely connected with Chappell Bros. & Company, Sydney, N.S., who are lumbermen, woodworkers, and contractors, and one of the most progressive and reliable firms in Eastern Canada.

## Tonawanda Trade Tropics

North Tonawanda, January 7th; (Special correspondence of the Canada Lumberman).—There is an unusual amount of building under way or in prospect in the Tonawandas and vicinity. The character of the contracts ranges from factories that will cost \$100,000, down to \$1,000 bungalows. Already large plants are planning to enlarge, and new factories have plans nearly ready for breaking ground. There are not enough houses to go round and generally speaking there is more activity in the building line in the Tonawandas than ever at this season of the year.

Lumbermen in the Tonawandas and vicinity are not pleased with the statement from the New York State Engineer's office that the 1,000-ton barge canal that will have its terminus at the Tonawandas cannot be completed within the original appropriation of \$101,000,000. The information that more money will be needed comes in the form of a communication to the New York State Legislature that the \$101,000,000 originally appropriated will be exhausted in two years and that New York State will then be under obligations for further barge canal excavating, for which there will be no funds available. The additional expense is due principally to the increase in the cost of lands and waters taken for canal enlargement purposes over and above the estimates of 1903, when the work was begun. Another cause is increase in cost of labor and material since enactment of the barge canal law. The State Engineer says he will have the barge canal ready for opening in 1915. All of the plans for finishing it are now ready. Nearly \$3,000,000 will be spent at the Tonawandas the next two years in providing an outlet for the canal into Niagara River.

A resume of the lumber business for the year shows that the last six months of 1912 were much busier than the first six months, so far as the Tonawandas were concerned. A presidential election usually sees a slowing up in the local market, but last year there was no slump in business and the more satisfactory conditions continued right up to January 1, 1913. It is many years since lumber dealers and other lines closely connected with the lumber trade reported business almost as active in the middle of December as in mid-summer, but such was the case in 1912, and the prediction is freely made that 1913 will find trade holding up to the pace set by 1912, if not better.

The Steamer Wyoming, with 600,000 feet of hemlock, was the last lumber craft to tie up at the Tonawandas. Her cargo was consigned to White, Gratwick & Mitchell. During the season of navigation just closed nearly 450 lumber carriers in the lake trade brought cargoes to the local ports. About one hundred of these were loaded with lumber from Canadian mills.

Batt Brothers is the name of the latest addition to the local lumber trade. The new company was recently incorporated to carry on a general wholesale and retail business in hard and soft lumber. The officers are brothers: President, Norbert J. Batt; vice-president, Raymond M. Batt, and secretary and treasurer, Irenus J. Batt. President Norbert J. Batt was until recently the Syracuse representative of the W. G. Palmer Lumber and Woodworking Company. All of the Batt Brothers have had experience in the lumber trade, their father, the late Michael Batt, having been one of the pioneer shingle manufacturers and lumber dealers in the Tonawandas. Besides an office and yard on Sweeney street, North Tonawanda, Batt Brothers will have a branch office and retail yard in Batavia, N.Y.

The death of Moses Shire, counsel for A. K. Silverthorne, indicted on the allegation of larceny by the Lehigh Valley railroad, will probably result in further delay in trial of this case that has been hanging fire for nearly a year. Mr. Silverthorne is head of Silverthorne & Company, one of the largest wholesale lumber firms in the Tonawandas, with important holdings in the west and south, and his arrest and indictment on the serious charge was one of the sensations of the last year in the lumber trade in the United States. The North Tonawanda lumberman is accused of collusion with an employee of the Lehigh Valley railroad that resulted in the approving of waybills for more lumber than was actually shipped. The railroad employee is jointly indicted with Mr. Silverthorne.

Mr. W. G. Palmer, prominent local woodworker and lumberman, has been appointed a member of the North Tonawanda Board of Public Works. Mr. Palmer has for years been active in the public improvement department of the local Board of Trade.

The institution of the new parcels post, by which articles may be mailed weighing not more than eleven pounds and being not more than four feet in any dimension, was quickly utilized by local lumbermen and woodworkers. One enterprising shingle dealer sent out 2,000 sample shingles by the first parcels post that left North Tona-wanda. Another dealer mailed several hundred sample lath, and both dealers report unusually satisfactory results from the innovation.

### Soft Weather Delaying Logging Operations

Ottawa, January 6th; (Special correspondence of the Canada Lumberman).—Though the mild weather which has prevailed since the commencement of the winter season up to the present has been good for some branches of the lumber trade, it has been harmful for others. Until last Saturday, outside building was as much in progress in Ottawa as it is at some periods in early spring. On Saturday a sudden drop in the temperature caused a halt in some quarters. The absence of snow and ice is inconveniencing work in the woods greatly. Logs are piling up all over the limits and until a good heavy fall of snow comes will have to remain there before they can be hauled down to the rivers. Mr. P. C. Walker, manager for Shepard & Morse, reports that he has been informed that in the lower provinces the mild weather has caused a number of saw mills to close down, because they cannot get logs from the woods.

Trade continues remarkably good in Ottawa and district though there is a temporary lull just now, while the dealers are taking stock and settling up the year's business. Cheques for large amounts of money are changing hands just now.

### Lumbermen Form Credit Association.

With the object of protecting themselves against the undesirable creditor, the retail lumbermen of Ottawa and the surrounding country have organized the Ottawa Lumbermen's Credit Association. Mr. Harry Templeton, who was formerly assistant freight agent in Ottawa for the Canadian Pacific Railway, was appointed secretary on Friday, January 3rd, when the final plans for the organization were made. Offices have been rented in the Canada Life Building on Sparks street. Some of the retail lumbermen here have lost rather heavily of late through the bankruptcy of certain contractors. In some cases this bankruptcy is believed to have been arranged by the contractor for his convenience, after his property had been turned over to his wife. It is to protect themselves against such contractors that the lumbermen have organized the association. The financial standing of every contractor in the city and district will be kept on file, together with any other important particulars as to his business record. The expenses of the association will be borne proportionately by all the members. Some of the leading firms which are members, are: W. C. Edwards & Company; The McAuliffe, Davis Lumber Company; G. M. Mason Limited; The Greater Ottawa Lumber Company; Estate of James Davidson; Barret Bros.; M. N. Cummings, and others.

A large new shed, in which to store dressed lumber, is being built by the McAuliffe, Davis Lumber Company. It will cost, when completed, about \$10,000. Work on it started a few days ago, and it will be ready for use early in the spring. The shed will have a substantial frontage about fifty feet wide on Duke street and will run through to Britannia street, a distance of about 200 feet. The new yard offices will be located in the front of the new shed.

### Expansion at Pembroke

The Pembroke Shook Mills Limited, a new company, will soon be ready to commence box making operations in a large new factory in Pembroke. The building is finished and the latest box-making machinery is now being installed. By the end of February or the beginning of March everything will be in readiness to commence operating the new plant, which will employ between 125 and 150 men. The company have a steady market for their product. Contracts for the supply of lumber have been made with firms in Arnprior, Braeside and Pembroke. The building alone cost \$17,000, and the machinery and other equipment will cost about \$13,000. The factory measures 220 x 96 feet, and is quite an imposing looking structure, built according to the most modern principles for industrial plants. A brick and concrete power house measuring 50 x 50 feet is also being erected. Mr. J. S. Stewart is the general manager.

Business in the lumber trade is evidently good in Pembroke. The Pembroke Lumber Company are spending \$25,000 on extensions and improvements to their plant in Pembroke. The third extension this season to their sash and door factory has just been completed. The company is specializing in Canadian and English frames complete with shutters, inside windows and outside windows fitted and No. 3 doors. The new machinery installed includes two new double cutting band mill saws, one new Wickes saw and one new Marshon band resaw. With this additional machinery, what was formerly cut in twenty hours can now be cut in ten. The company is taking out about the same cut of logs this season, viz., 350,000.

The Estate of James Davidson entertained the retail lumbermen

at dinner on Friday evening, January 3rd, in the New Russell Hotel. Mr. Grant Davidson, eldest son of the late James Davidson, occupied the chair. Matters of business were discussed, after which a general good time was enjoyed.

### Higher Prices Predicted

An increase in the price of lumber in this district will shortly go into effect. An advance of six to ten per cent. on all good lumber will be made and from ten to fifteen per cent. on mill, box lumber, and dead culls. Shipping culls will sell at the same price as last year.

To keep abreast of their growing business, J. Oliver & Sons, Limited, furniture manufacturers, of Ottawa, have just completed a three-storey extension to their factory building measuring 80 x 45 feet. The most up-to-date machinery is now being installed and it is to be in readiness to begin work early in the spring. The cost of the new building and equipment will be \$20,000, and will give employment to twenty-five extra men. The seventy-five men now employed by the firm were entertained at a dinner given by Mr. James Oliver, president of the company, on Saturday, January 4th. The dinner was served in the top floor of the new building, and an enjoyable evening was spent. The total size of the factory is now 240 x 45 feet.

Mr. J. A. Ellis, M.L.A., who was persuaded to run for Mayor of Ottawa by Mr. J. R. Booth, Senator W. C. Edwards and some other prominent lumbermen and business men of the city, was elected tonight by a substantial majority over two other candidates.

W. C. Edwards & Company, Limited, entertained all the members of their sales force and the head shippers at a dinner at the Chateau Laurier on Friday, December 27th. The guests present numbered forty-three, among them being Mr. Smith and Mr. Carrol, of the Robinson Edwards Company, Burlington, Vt. Mr. Gordon Edwards gave a luncheon at the Laurentian Club upon the same day to the salesmen. A meeting was held during the afternoon at which the salesmen and shippers were present, during which the business of the past year was discussed. After the dinner in the evening an excellent programme of music and speeches was gone through. The unanimous opinion of all present was that 1912 had been a good year for business and 1913 promised to be equally good, if not better.

### Bright Prospects for 1913 Business

Peter Lund, of Wardner, B.C., reports that lumbermen in the mountain district expect a splendid year's business during 1913. Already several of the mills are filled up with advance orders which will be rushed for spring building. The lumber industry all over British Columbia, according to Mr. Lund, will be more active than it has been for some years past. "We expect to have a big year," he stated in a recent interview. "The prairies are filling up very rapidly every year. The towns all over the West are growing bigger all the time and next year we expect to have one of the biggest building years in the history of the trade. This means that more lumber than ever before will be used and all the mills, both in the mountains and at the coast are making preparations for a phenomenal year's business. The many buildings still being erected and the fact that a lot of construction work has not yet been closed down makes it hard to get men for the woods and wages for lumbermen and helpers in the camps will be higher this year than ever before."

### Swedish and Wood Trade Active

A report to the Department of Trade and Commerce, at Ottawa, says:—The wood goods season of 1913 has opened well, Swedish gulf deals and battens commanding about 10s. more than a year ago. The Norwegian floorings sales have commenced under rather peculiar conditions. As a rule the south and east coast British importers have been the first to buy in order to secure their regular specifications of 7 inches, while the Liverpool and other west coast importers have held back and have usually bought at about five shillings below east coast prices. This year it is the west coast importers, however, who are the more eager buyers and a number of sales have been made at £11 2s. 6d. to £11 5s. 0d. basis 7 inch mixed white c.i.f. Liverpool and other west coast and Irish ports; business to the east and south coast on the other hand has been rather slow on a basis of £11 for 7-inch mixed white and £13 first reds c.i.f. The explanation is no doubt that narrow widths in whitewood, of which the importation to west coast mainly consists, are getting more scarce owing to small logs being used by the pulp mills.

### Barbados Lumber Markets

S. P. Musson, Sons & Company, Bridgetown, Barbados, report as follows under date of December 20th:—Lumberstuffs—W. pine—The Trn. Schr. "Laura C." from St. John, N.B., to our address, with a small cargo of 185 m. ft. is the only arrival to note for the past two weeks. Several cargoes to arrive, have, however, been contracted for at \$32 and \$24 for merchantable and second quality, respectively, and these will about fill present requirements. Spruce—No receipts, and the position is unchanged. Stocks are not heavy, and first arrivals should bring full rates.

# A Year of Changes in New Brunswick

**Strikes, High Ocean Freight Rates and Expensive Logging Operations Combined to Worry Manufacturers—Good Prospects for 1913**

St. John, N.B., January 6th, 1913; (Special correspondence of the Canada Lumberman):—The year just gone by has been one of many changes, affecting the lumbering, the manufacturing and the marketing of all the logs and lumber produced in this section of the country. It has been a year of very great changes from beginning to end, and to-day the manufacturers in this section are much worried as to whether they are going to have sufficient snow to get a log hauled to the streams or not. It always has and always will be a very worrisome business. In the beginning of 1912 the outlook for selling spruce in this section was very black, the buyers of deals would simply make no offers, or if they did they were so ridiculous that no seller dare consider them even for an instant. Logs were costing about \$13.50 to \$14.00 per M. landed at the mill slips, and the offers made by the buyers ran all the way from \$12.75 to \$14.00 on sellers' wharves, this it will be readily seen meant a loss to any manufacturer who sold at those prices, and practically no one did sell at the price, but kept on manufacturing in the hope of brighter days to come.

The next trouble which arose, and it came just as the mills got under way, was a strike of the mill men, for an increase in wages of 10 per cent. all around. This the manufacturers felt they could not afford, but rather than tie up their plants they granted the increase, and after it was granted, during the whole season, the employees gave poorer returns than they did before the advance, going and coming when they liked, and in no way showing any appreciation whatever of their improved condition. In fact, all manufacturers in this section of the country concur in one thing, that the daily turn-out of the mills in this section was lower than ever before.

Along towards midsummer, prices began to rise, the Russians in the Baltic had a great set back, having had an unprecedented thaw during the winter, and were forced to leave a large quantity of their logs in the woods. Many of the mills which were contracted for millions, never delivered a foot, this made a severe shortage of Rigas in the English market, and buyers were forced to turn elsewhere for deals. But while the price of deals began to rise, the price of freights outran the price of deals, and steadily from 40 shillings they rose to 80 shillings per standard, the highest ever paid to steamers for ocean freight for fifty years. But the buyers had to meet the freights and pay to the manufacturer the increase in price plus the increase in freight.

## A Good Demand From Eastern States

Another important feature which also caused prices to rise suddenly, was the demand coming from New England and the Metropolitan district of the United States, largely for short average stock. Many of the manufacturers in the early season had offered to United States buyers the cuts of their mills turned into two inch, a very hard thing to saw, as it cuts into the scale of the log, besides cutting down the daily turn-out of the mill. The buyers in many instances would not offer anything at all, and said the market for short average stock, which is the larger kind of logs cut in this section, would fall by July 1st, and they would therefore rather only buy in limited quantities. As it turned out it was much better for the mill men, and the buyers have undoubtedly regretted it very much during the season, for instead of the price going down after July 1st, it kept steadily gaining from a \$21.50 base in early spring to \$25, and closed the year on a \$26 base price, the highest since 1907. It all goes to show that the mind of man is apparently not wise enough to see into the distance, as far as the lumber industry is concerned. While the operators in this section of the country have not had what they will call a banner year, still, they will all close the year much better off from a financial point of view than they expected or hoped for at the beginning.

## Cold Weather Urgently Needed

The year just beginning is looked at in a much different way from last year, the season or fall of 1911-12 was an ideal one for yarding. The fall had been fairly dry and men much more plentiful, and logs had been yarded even faster than the operators wished for. This year the conditions are entirely different. We have had an extremely wet season, one of the worst in years. All through the summer and fall rain has fallen very heavily nearly every week and the woods in some sections are impassable. Men have been scarce, wages rising from \$30 in early fall to \$38 and \$40 for choppers at the present time, and men scarce at that. The woods being so very wet retards the yarding of logs and in many sections where ground is low or mixed with swamp, horses cannot go and operators are forced to work on

ridges, which means scattered logs and therefore slowing up work. Should this keep up for another month it means that the cut of logs throughout the St. John River section of New Brunswick will be very much curtailed. As yet no one can tell the outcome. On the headwaters of the St. John both in the State of Maine and in Quebec, there is very little snow and it is covering ground unfrozen, which rots the snow and makes work doubly difficult. It is to be hoped that we shall have an immediate change to cold, hard weather so that the operators can reap some of the benefits which it is felt are in store for them after five or six years of up-hill work. In Nova Scotia it is said that conditions are even worse than they are in New Brunswick, and as many rotary mills have gone into the woods in the province it will spell ruin for them unless a change comes soon.

## Good Outlook for 1913

The outlook for the sale of deals to the English market seems good, the rates of freight are not as high, in fact it is said that vessels can be chartered to-day for 50 to 55 shillings for Bay of Fundy ports, that in itself being quite a drop. Stocks both on the north shore and at the ports of St. John are only about one-half of what they were last year. The unfavorable weather and also the stocks in all the English ports are lower than they have been for many years, and what parcels are going forward by liners are being taken from quay about as fast as they are landed. Prices are sustained, consumption is good and business in England is extra good. Also, as we look to the United States we find the stocks on yards are very light. Transportation conditions during the season, both by vessel and cars, prohibited any surplus being shipped. In fact, many orders are yet unfilled because of lack of cars and vessels, and buyers are flooding the country with new enquiries every day. Therefore, business in general and financial matters should keep pace, as they are doing to-day. If nothing radical should occur to mar the general outlook for good trade the world over, no reasons can be given except those already stated which will not help to make 1913 a good year for the lumber trade.

Some sales of deals for 1913 delivery have taken place in this section during the week. The price is said to be \$16 for a specification of fifty per cent. 7 x 8 x 3, balance 9 in. and up, with 3 x 4-5-6 ends and fourths at usual reductions, but it is felt that very few will sell even at that price under present conditions. There is practically no old stock of any kind left unsold, it being all in the hands of a few buyers here. Spruce boards cannot be had at all for less than \$14 at mills, and there are very few for sale.

Hemlock.—No stocks on hand except small quantities in retail yards, and they asking \$15 per M.

Low grade stocks of 1, 2 and 3-inch, have all been disposed of at about \$9.00 to \$9.50 per M. in yards.

Laths have all been sold.

Freights coastwise remain at a standstill as very little shipping is being done because it is felt to be more or less hazardous at this time of year. Vessels for New York are getting \$4, which is about 50c per M. less than heretofore. Ocean freights—the liners are taking small parcels at about 45 shillings, but space is very limited, general freight taking the place of lumber. The deal shipments from St. John to England showed a marked falling off in 1912, being only 79,000,000 against 129,000,000 in 1911—due to the mills not manufacturing as much for the English market and also the high rates of freights.

The stocks on the Miramichi are also low, only about 29,000,000, against 59,000,000 in 1911.

The schooner Wm. T. Donnell, carrying about 400,000 feet of lumber from this port for New York, shipped by Geo. McKean, was lost at Mace's Bay about twenty-five miles out of St. John recently. The cargo was fully insured.

It is said that Mr. Samuel Elliot, for many years identified with the scowing of lumber, will manage the new mill being erected by Mr. J. E. Moore at South Bay, N.B.

Reports from Fredericton, N.B., state that the amount of lumber cut at the head waters of the St. John river this winter will be much smaller than last year, owing to the unfavorable weather conditions. There was only eight or ten inches of snow in the woods early in January, and the lack of frost in the ground made the swamps practically impassable. The men were then still engaged in yarding the logs.

## Sash and Door Markets in the U. S.

### Improved Outlook for Trade During 1913—Will Exports to Canada Diminish? Review of Trade

Sash and door manufacturers in Ontario have been studying closely the situation created by the extensive importation of doors from the United States. Conditions in the United States sash and door markets have had a great deal to do with the extensive exports to Canada. With rather sluggish markets in the States and plants equipped to turn out enormous quantities of doors, it was natural that an outlet should be sought in Canada. Conditions in the United States at present are encouraging, and there is a good prospect of the exports to Canada falling off on account of increased home consumption. The American Lumberman in its last issue published the following review of the situation in the United States.

Now that the holiday season is over buying of sash and doors is good, though the inventory period is interfering somewhat. Dealers, however, say business is much better than at the corresponding period last year. They are pleased with the present situation and the outlook for spring trade is promising. Inquiries from retail dealers have been large, but trade resulting from these inquiries will not materialize greatly until dealers finish their work of stock-taking and take up in earnest the demand that will come in the spring. Manufacturers are finding their stocks much more broken than a year ago.

Factories in Chicago are receiving a fair amount of orders, these coming chiefly from local dealers, but they expect their out-of-town trade to pick up materially within a short time. The weather conditions that have prevailed in Chicago until the last few days permitted building to proceed and kept up the local demand. Prices are steady and carload trade shows as much activity as any other.

While wholesale and retail business in the Northwest is quiet, the Minneapolis and St. Paul factories are not shutting down for any length of time, but are running on stock sizes in the expectation of a good spring trade. Buildings under way are numerous and there will be considerable special work from time to time, but the outlook for country trade later on is fine. It will be comparatively quiet for the next month or so.

This is, of course, not the time the sash factories are loaded down with work, but Baltimore (Md.) operators say they are getting enough orders to keep their factories in operation and the demand for their products is up to seasonable expectations. It is also to be said that prospects are most promising. Within the last week a number of building projects have been brought forward and the outlook for the sash factories is therefore decidedly promising. The high price of lumber naturally is causing an advance in the cost of sash and doors, but generally speaking the returns on mill products are fair and the margins of profit sufficiently encouraging to impart a feeling of buoyancy to the trade. To be sure plants are not pushed, but they are doing about as well as can be expected.

The door mills of Buffalo, N.Y., have found trade somewhat quiet since the first of the year, the weather not being favorable for any building work. Where building is only partly completed there is a fair demand for doors and sash to finish the work. The fir door trade in the eastern part of the State shows up well for the season and that variety of door is making much headway. Some salesmen state that they sell 10 cars of fir panel doors to one of any other kind.

While usually at this time of the year there is plenty of real winter weather in Cincinnati and the planing mills and retailers of millwork instead of working to capacity on special stock for immediate use are taking advantage of the lull in building activities and are keeping the mill hands busy making up stock sizes for spring business, the remarkable weather conditions have been so favorable to outside work that builders have kept on and consequently the millwork dealers have had all calculations upset and are busy getting out all kinds of interior finish, which will not be completed for the next five or six weeks and they will have very little time to work up very much stock for the spring building. The only thing for them to do is to buy heavily of this material that they are unable to manufacture and the out-of-town manufacturers of millwork should have an increased business in this line in this section. This market has always been a good buyer of stock sizes, but the coming year will be bigger than ever for the reasons given. Prices are all high, due to the high cost of rough lumber, coupled with the heavy demand throughout last year. According to the architects more homes than ever before will be finished in red gum during the coming season, as the results obtained with this wood from past experiences are so satisfactory that they do not hesitate to advise prospective home builders who are looking for a hardwood finish and do not care to pay the price of some of the more expensive hardwoods, to use gum, and many of them are taking this advice. There will be, of course, plenty of oak finish, both plain and quartered used, as usual, as nobody will deny the excellence of this wood for finishing purposes and substitutes are being used

only as a matter of effecting a saving and with a satisfactory result obtained at the same time. The prospects for another big year are the very best, and dealers in all kinds of building lumber and millwork are now in the market for their requirements or soon will be.

Now that the figures for the old year are in it is evident to the millwork trade of St. Louis that 1912 was a much better year than the dealers supposed it was going to be. It is also evident that the conditions governing are vastly better than they have been in January for a number of years. This has put heart into the local trade and the dealers are once more viewing the coming season with optimism. There was a larger volume of realty transactions in St. Louis last year than there was for several years previous and this presages an era of building during 1913 which will make work for the local sash and door houses. The same condition prevails throughout a large part of the so-called St. Louis trade territory. Inquiries are already stronger than they usually are for January, and orders are more plentiful. The price tone of the market is still unsatisfactory, on account of bitter competition in the sash and door trade. Mixed car business out of St. Louis is considerably in evidence.

There has been little stir in the market at Kansas City during the last week. A combination of holidays, inventories and snow has kept orders down to the minimum, but that is by no means discouraging to the manufacturers and dealers. Inquiries are unusually large in volume and size and mills here are looking for a better season than the one just passed. Prices have started up from the low level that ruled for much of last year and scarcity of mill material practically assures further advances. Also there is evidence of an increased amount of building. Yard men generally are figuring on a strong country demand. It is notable, also, that the country demand is each year for higher grades of sash and door.

Sash and door manufacturers at Tacoma, Wash., say stocks are light and demand good, with every prospect of a big spring trade. While the 1912 volume of business has been large, prices have not been wholly satisfactory, but the way 1913 is opening indicates that doors and columns are going to do better this year. There has been considerable increase in output during the last year in the district tributary to Tacoma in both doors and columns, but the factories all report orders ahead, a firm market and a bright outlook.

Heavy inquiries for window glass were received during the last few weeks of the old year and all the factories began the new year actively engaged in filling orders. Stocks are well cleaned up and jobbers have placed orders that will readily absorb all the glass that is produced for the next few weeks.

### Larger Door Plants Needed

Hamilton, Jan. 7, 1913

Editor Canada Lumberman:

The great difficulty with the Canadian manufacturers of sash and doors is that our trade, until recently, has not been sufficient to turn out doors in such a large quantity as the United States manufacturers. These United States factories are no doubt dumping doors here, but they are just putting in what we call stock sizes which they make in large quantities, and when you see the door, you will readily see how cheaply they are made. But for any odd sizes that are ordered from them, they charge a better price than we obtain in Canada. Another difficulty about the Canadian door trade is that, in the busy season, from June 1st to Dec. 1st, the manufacturers have sufficient to do, and then in the slack time, I suppose largely because of shortage of capital, and incidentally also because of lack of storage room, they are unable to run long time. It is in this slack time that the U. S. manufacturers pile up stock and endeavor to get orders in Canada to keep their mills running.

Also, those people who have money and ability, are not satisfied with the profits that are obtainable in the sash and door industry, so the only hope that I can see is that the Canadian manufacturers will stick together and work point by point until they become a little better educated and a little more unselfish towards one another. With mutual assistance and information we will eventually grow stronger and be able to command the trade for the doors that the U. S. manufacturers are now making, and be able to make them as cheaply. The U. S. manufacturers are great perseverers in trade and they dig up trade in season and out of season at all times and have great confidence of manner. They come over here and actually persuade people that they can make a cheaper and better door than we can.

Yours truly,

F. W. Brennan.

During the months of September, October and November 1912, 10,684 doors were imported into Canada at Toronto. These originated for the most part at Oskosh, Wisconsin, and from the State of Washington.

# Use of Flumes in Logging Operations

## Advantages of an Artificial Water Way for Taking Out Logs in Difficult Mountainous Regions—Principles of Construction

By W. D. Starbird

There are large quantities of standing timber, desirable for the various purposes of the manufacturer, located in the mountainous regions of the West difficult of access, that present many serious problems to the logger and lumberman desirous of getting the product of these forests to market at a practicable cost.

With the methods of transportation commonly utilized in logging operations throughout the West, in the mountains and the lower country as well, lumbermen, are, no, doubt, perfectly familiar. The logging truck and sled, the dry log chute, the donkey engine with ground lines and sky lines, the locomotive and railroad track, and streams navigable for floating logs, all have their place and use in these operations. Of these the railroad and navigable streams only are practicable as a means of transportation where material must be moved any considerable distance.

Streams large enough for navigation by tug boats for towing logs in rafts or booms are seldom to be found in the inland districts; and those in which it is practicable to economically float or drive loose logs are only found occasionally available.

The railroad has many disadvantages, especially in the mountain districts, where the building of railroads is difficult and expensive. Serious and often insurmountable obstacles in the way of difficult engineering feats and prohibitive cost are met with. Frequently the grades are so steep as to make a railroad impracticable to operate and at best the cost of constructing and operating are both likely to be excessively high. After a costly grade has been built and the steel laid, high power and expensive equipment are required, creating a large overhead expense, and then accidents are almost sure to be frequent and the cost of maintenance high. It is only possible to handle comparatively small quantities of timber at each trip of a train and the cost of loading and unloading is quite an item to be considered.

### Solving the Transportation Problem.

In a great many instances where railroad costs would seem to be prohibitive, a V-flume of the proper dimensions and practicable construction would solve the problem of transportation satisfactorily.

The style of flume mentioned has been in successful use for a great many years for various purposes of transportation, more particularly for floating sawn lumber, railroad ties, cordwood, etc., but so far as I know has only been utilized for handling saw logs in a very few instances.

Water and a descending grade are the only requisites absolutely essential for a flume proposition. The volume of water necessary will vary greatly, depending on the size of the flume required, which will be determined by the size of the timber to be floated. Where the water supply is deficient, it is generally feasible to provide storage ponds by means of dams and in this way secure ample water for fluming a part of the time. A flume has a surprisingly large capacity for floating logs and in consequence it will generally be found that it is not necessary to have it in operation more than a small part of the time.

A flume, when at all feasible, has many advantages over a railroad. It can be utilized and is practicable in the roughest, most rugged country to be found in the timbered sections of the mountains. It can be built at a practicable cost and successfully operated on steep and rocky hillsides, over or around rock cliffs, and through narrow, rock-bound, winding canyons, where a railroad could not be considered possible.

A flume is ordinarily built on trestling, and a difference of a few feet in the height of the trestles makes little difference in the cost of construction and none in its successful operation. It is largely due to this feature that it can be built much cheaper than a railroad, especially in a rough, broken country. On hillsides where grading for a railroad would be heavy all that is required for a flume is a couple of footings every 16 feet.

Where large boulders and rocks are to be passed over railroad construction requires expensive blasting, cutting, and filling, while the flume is carried over by trestling. If an occasional cut for a flume cannot be avoided, it is usually much less expensive than for railroad construction.

Grades varying from one-tenth of 1 per cent. to 25 and even 30 per cent. are practicable for a flume while 10 or 12 per cent. is, I believe, conceded to be the maximum permissible for a railroad.

It is not necessary that the grades be either uniform or constantly descending. If the average fall or slope of the country over which a line is to be built is sufficient, high points can generally be passed

over by flattening the grade line above and making it more steep below.

The steeper the grades are the greater capacity a flume will have, while the volume of water required is not increased. Owing to the velocity attained by a log running on steep grades, it will have an added buoyancy which combined with its momentum causes it to run faster than the water on which it is floating. The result is that it banks the water in front and creates an increased body on which to float.

On the other hand, where the grades are flat, say with a fall of anywhere up to 4 or 5 per cent., if a log is too large to float free its progress will be retarded and the water will accumulate around and behind it, forming an extra head that will float it. This is always provided the flume has been built of a size large enough to give the depth of water necessary to float such a log free.

### Curvatures Permissible in Flume Construction.

The sharpest curvatures permissible in flume construction will vary greatly, and can be satisfactorily determined only by careful consideration of all the conditions to be met in each particular case.

Generally speaking, if the size of the flume is figured close to the requirements necessary to float a log of the largest diameter to be handled, a maximum curvature of 20 degrees can be allowed for logs up to 24 feet in length, and 25 degrees for logs not over 20 feet in length.

Under similar conditions, a curvature of from 4 to 6 per cent. would be the limit for logs 60 feet in length.

Increasing the size of the flume and the volume of water makes sharper curves possible.

These curvatures are, however, extreme and are based on the presumption that the longest logs handled will not be cut from the timber of largest diameter and that the sharpest curves will not be required where grades are exceptionally flat.

Sharp curves are to be avoided when possible. They increase the strain and wear on a flume and reduce its capacity both as to the size of timber that can be floated and the quantity that can be shipped.

When, however, they are unavoidable, care should be exercised to secure a grade sufficiently steep to give the log enough momentum to insure a velocity around the curves exceeding that of the water in the flume. If this is done, the front end of the log will accumulate a surplus head of water, which will raise it at that end, while the rear end will be lowered by getting ahead of the regular flow of the water. The result is that the log will readily pass around a much sharper curve, without detriment to the flume, than would be possible where the speed of both the log and the water is equal.

### Length of a Flume Limited.

The length to which a flume can be extended without prejudice to its practicability or economical operation is limited only by the possibility of obtaining a sufficient supply of water and descending grades.

Any flume more than two or three miles in length should, if possible, be provided with feeders at intervals as frequent as practicable. It is probable that there will be branches coming into the stream from which the original supply of water was secured and that there will be little difficulty in turning this additional supply together with what has escaped from the flume into it again by means of a flat-bottomed flume built on a nearly level grade. These feeders are generally short in length and inexpensive. It is not always essential to have these feeders. I have seen stretches of flume 8 to 10 miles in length without one.

### Cost of Constructing and Operating a Flume.

The cost of constructing a log flume will depend on its size and the general topography of the country through which it is built. Taking as an example a 54-inch flume, which is large enough to float logs up to about 60 inches in diameter, if cut from any of the more commonly known species of timber the minimum cost per mile will be about \$6,000 and the maximum cost should not exceed \$8,000, under the most difficult conditions. This estimate is based on lumber at \$10 a thousand feet and common labor at about \$2.50 a day of 10 hours.

The quantity of lumber required per mile will range from 300,000 to 350,000 feet and \$500 per mile will ordinarily cover the cost of nails, telephone equipment, and other material necessary.

The cost of operating such a flume is very small and the capacity

is surprisingly great. Therefore, the cost of transportation per thousand feet of logs per mile is very low.

As compared with railroad costs figured on the same basis under similar conditions, the advantage is very much in favor of the flume. The cost of loading logs on cars for hauling by rail is considerably higher than the most expensive method of loading them into a flume, while the cost of unloading is entirely eliminated.

There are several different ways of getting logs into a flume. When it can be done, the cheapest and best way is to provide ponds into which the logs can be dumped and floated into the main flume either direct or by means of a branch flume. In this way one or two men will ship out as many logs as the flume will carry, up to 400,000 or 500,000 feet a day of 10 hours.

Where it is not possible to utilize a pond, skidways may be provided along the sides of the flumes, built up to a convenient height for rolling the logs in over the tops of either side. If the flume should be so located that this cannot be done, a jammer can be used to good advantage and at a lower cost per thousand than for loading on cars by the same method.

The costs of maintenance and patrolling are practically the only other costs of operating a flume. Stations should ordinarily be established every two or three miles and provided with telephones and a patrolman placed at each station.

These men should keep the flume in repair without additional help except in case of a bad breakdown.

The material and supplies required to keep a flume in repair for the first two or three years should not exceed 1 per cent. per annum of its first cost, and it should not exceed 5 per cent. per annum to make its life perpetual.

#### A Successful Example of Flume Construction.

In conclusion, will call your attention to the flume constructed last year on Rochat Creek, near St. Joe, Idaho, for the Milwaukee Land Company, which has been in operation since early in the spring of 1912 and has demonstrated the advantages to be gained by the use of this method of transportation.

The country through which it was built was exceptionally rough and difficult; a narrow rock canyon had to be passed through; the creek bottom was narrow, and fire had swept over the territory the year before and filled the canyon and entire bottom with partly burned timber and windfalls. The decision to build the flume was reached only after it was found impossible to get a railroad in. Its length is approximately five miles. The average grade is about 11 per cent., the steepest grade 15 per cent., and the sharpest curvature 20 degrees.

A wagon road was first built through to where it was proposed to start the flume, and a portable sawmill was installed to manufacture the lumber required. Construction of the flume was started at the mill and the lumber used was shipped through the flume as fast as completed to the head end.

The regular V-box type of construction was used, built up on trestles set 16 feet apart supporting stringers on which the box rested. The trestles were built of 4 by 8 timbers, sills, posts and caps and cross-braced with 2 by 6 planks. The stringers were 5 by 10 with 2 by 6 lateral bracing and round pole supports in center of bent. The brackets supporting the box were built of 4 by 6 sills and arms braced with 3 by 6. The box was built of 2-inch rough plank battened with 1½ by 4-inch strips set in between the brackets, which were set two and four feet centers.

The cost of this flume including its six feeders and telephone line and equipment was approximately \$40,000 or a little more than \$8,000 a mile. It would be hard to find more difficult or expensive conditions for the construction of a log flume than those governing this proposition.

After the flume was completed late last fall, it laid idle through the winter, covered with snow, which attained a depth of 8 to 10 feet, and this spring the water was exceptionally high, but it withstood these severe tests and without any repairing was said to be in as good condition as when completed.

Up to July 1st of this year between 7,000,000 and 8,000,000 feet of logs have been run through, and the only expense has been in loading them into the flume. There have been no patrolmen employed and the only repairing necessary was caused by a couple of trees falling across the structure during an exceptionally severe wind storm.

Experienced loggers who have closely watched it in operation say that its capacity is limited only by the number of logs that can be gotten in.

Many different ideas have recently been advanced with reference to changes in the type of flume constructed for the Milwaukee Land Company, the most notable being a plan to use a circular or oval instead of a triangular box. Either type would be much inferior for several reasons. A greater volume of water would be required to fill such a box to the same depth and floating capacity attained by the V box. It would have to be of greater size to give clearance for a log of the same dimensions in passing around curves. There would be

## The Use and Value of Forest Maps

### Timber Growth and Topographic Maps Give Important Information at a Glance

By K. Mc. R. Clark

The history of all great industries shows a succession of improvements, not only in the methods of doing the work, but also in the organization and management of the business. Thus it is that as we look over the records of the lumber industry, from the days of the individual logger with his single pair of oxen and his water mill to the present big corporation with miles of railroad and highly organized mills, the fact which first strikes our attention and even wonder, is the steady advance in all branches of the business. With the slogan "timber land is going up," logging methods have become more and more efficient, and actual economies of cutting are doing much to preserve the lands now timbered. The woods manager of to-day has many things to absorb his attention and even with the most modern business methods, is bound to be much of an office man. Often he can no longer obtain knowledge of his timber lands at first hand, but is obliged to rely on others for his information. Of course, the larger the holdings of his company the greater the difficulty that he finds in knowing all that he should know in order to meet all problems as they should be met, and the more need he has of exact and reliable information.

To supply such information there has been developed the systematic reporting of forest assets and conditions by men trained for such work. These men may be regularly in the employ of the company or be experts brought in to report on the land only once. As in the other branches of lumbering, the methods employed by these experts have undergone marked changes to meet new demands put upon them. Thus it is to-day that the old eye-estimator has largely given way to the man who actually counts his timber or a part of it and he in turn is being superseded by even more exact methods. Of much importance is the system of plainly and simply putting the data obtained in the woods on paper. First class, accurate, and comprehensive maps enable the estimator to show the manager, himself unable to see much of his timber, just what conditions exist in the field.

#### Maps For Northern Forests.

The best modern forest maps for the north are usually made in pairs, one map showing topography, while the other is a timber or growth plan. The topographic map acts as a permanent map of the area under consideration and is, therefore, made on some good serviceable drawing paper which will stand hard usage. This map should show the boundaries of the tract according to the best data obtainable, usually at a scale of at least four inches to the mile in order to delineate all important features, and so that it may be used with the timber plan. Besides, the exterior lines and any interior divisions that are made, this map should give the location of streams, rivers, lakes, bogs, and other striking natural topography. Elevations are expressed by contour lines at intervals of 25 to 100 feet in elevation, their location to be determined in the field by aneroid barometer, with level lines as a check, or by some other method suitable to the country. Other information of value to the lumberman, such as highways, tote-roads, important hauling roads, railroads, tramways, sluices, dams, camps, telephone lines, mills, etc., should be accurately located on this map. This plan, as well as everything else done in making reports, or estimates, is for the benefit of the man who cuts logs. It is for his assistance that such work is done, and it is by his judgement that the lumber expert stands or falls.

The growth or timber plan is usually made upon tracing cloth so that it may be superimposed upon the topographical map. This is, however, unnecessary, if the topographical features except the contours, be shown. This plan is temporary, as the timber which it shows changes rapidly, especially on a tract where there is extensive lumbering. Timber is set forth on this map by colors, each color representing a separate type of growth. Thus for instance, mixed hardwoods are shown by one color, mixed softwoods by another, pure spruce by a third, burnt-land by a fourth, etc. The quality, age, and general condition of the stand is indicated for part of a type by specific notes written on the map where they apply. General logging conditions, such as the footing for teams, the roughness of the ground and the difficulty or ease of swamping roads, are also shown in this way. In order to do all this in a legible manner, the scale of the plan should be not less than 4 inches to the mile. In case this scale be too large to allow the handling of one big map, the plan may be made in sections, and the topographical map, made at a smaller scale, be used as a key. Streams, roads, dams, camps, etc., should appear on the growth plan, as they are important in their relation to the timber.

A good set of such maps is of untold value to a lumber company. Often they serve a possible investor or bonding house as a graphic greater opportunity for logs to double up and jam, and the leveling and alignment would be more difficult to maintain.

picture of the extent and character of holdings. Together with the detailed report which should accompany them they answer any question that those interested may in reason ask. Special features, such as water storage possibilities, may be included to meet the demands of the particular tract or proposition.

The greatest value of these maps, however, is probably found in their relation to the administration and management of the operations of the company. On large holdings it is almost impossible for the manager to be acquainted with conditions over all his property at first hand. A case of this kind came under the observation of the writer in his work with Mr. James W. Sewall of Old Town Maine, for the Chicoutimi Pulp Company, in Quebec. The holdings of this company, on which the work was done, extend back about 70 miles from the town of Chicoutimi, the company's headquarters. The last 35 miles of this land is virgin, and offers many difficulties to one wishing to look it over in a short period. No manager can trust to memory for knowing such a country. But good forest maps will give him the essential facts. He will know not only the amount, but also the quality and location of the timber, and the best methods of getting at it. Thus the manager may see at a glance, timbered and untimbered areas, and the location and extent of past and present cuttings. He can plan his operations far in advance so as to utilise his road and water systems to their highest efficiency, and keep his cut distributed over watersheds as occasion demands. By a comparison of the timber plan with the topographical map, the natural outlet of each bunch of timber can be seen, and, in fact, most pertinent questions in laying out a general scheme of the work readily be answered. At times for instance there may be two or more outlets for a certain bunch of timber as was the condition found by the writer in his work for the Davison Lumber Company, Limited, in Nova Scotia. A good set of forest maps shows such lays of the land on the topographical plan.

The value of forest maps is not temporary, they make a permanent record which is ever at the disposal of the company. Cruisers' reports rarely express explicitly all information so that a stranger to the property can thoroughly understand it. A new manager often lacks the knowledge which his predecessor has gained from long familiarity with his territory, and unless he has some means of knowing the character of his proposition he will be apt to make mistakes, costly both to his company and to himself. Good forest maps avoid this complication. The new manager can see his whole area before him as soon as he comes into the office while no manager need be any longer dependent upon the presence of a subordinate who holds all that is known of a region in his head.

#### A Record of All Operations.

Nor is the use of these maps confined to the manager alone. To the directors of the company, many of whom can have but a very rough idea of conditions in the field, such maps are a great aid in the determination of policies to be adopted. The manager, asking for permission to undertake new methods, or to open up new areas, and the directors, seeking to follow the work of the manager, will find that a good map is the best means of explaining or understanding the proposition. Then, too, the timber plan may be used as a means of keeping a continuous record of changes in the character of the holdings. As cutting goes on from year to year the areas cut over can be noted by shading or some other method, while notes may be made as to how much timber was taken in each year's operation, and how much left. The extent of fires and the damage done by them may be indicated, when they occur. Damage by blow down, the depredation of insects or disease can be followed up and given measures be taken to save the timber. In a word, the manager and directors have always available a graphic running account of their woods situation and work.

In this brief article a few of the uses to which the modern forest map can be put and the value it has in the business of the lumberman are shown. How much do these maps cost? Under ordinary conditions a reliable concern will make them for from ten to fifteen cents per acre, with the lower price prevailing unless the property offers undue difficulties. This will, on the ordinary tract, not amount to more than about two cents per thousand board feet. No wiser expenditure can be made, and no greater insurance against mistakes of administration or construction be acquired.

#### Canadian Western's Extensions

A recent report from New Westminster, B.C., referring to the extensions under way at the plant of the Canadian Western Lumber Company, says: When the 75 carloads of machinery now in transit is installed in the addition to the plant of the Canadian Western Lumber Company at Fraser Mills, at an expenditure of \$550,000, a capacity of half a million feet will be the record of the combined plant for a ten-hour shift and the daily output will be close to a million feet per day. While the Fraser mill at present has the record of turning on one floor the greatest board measures of any mill in the world, this new addition will make the mill's general daily output greatly in excess of any other plant in the world. At the present time a total of

750,000 feet is the daily output and the number of employees 1,130, but when the new plant is in shape in April 500 more employees will be added. The new cedar mill buildings have been completed and the machinery will soon be installed. This will give a capacity of 350,000 shingles each ten-hour shift. In addition to the present plant seven new dry kilns have been erected, making three more for shingles and four for lumber, and giving the plant seventeen in all. Besides this a large storage shed, a veneer factory 100 by 200 feet in size, a sash and door factory, 100 by 300 feet with a shed 100 by 200 feet, will also be installed.

The new plant will be electrically driven, and with the exception of the turbine engine installed in the new plant of the British-Canadian Lumber Company at Queensborough, this machine will be the largest in any mill on the American continent. The turbine will be of 1,875 kilowatt, low pressure.

#### Cooperage Logs in Short Supply

James Innes, Chatham, Ont., in a recent letter to the National Coopers' Journal discusses the cooperage business as follows:—"We really do not know just where we stand at the present time, as we have had no winter in our part of the country, namely through Michigan, Ohio and Ontario. Indiana does not cut very much figure any more in the cooperage business as far as winter stocks are concerned, as what stock they put in they put in irrespective of the sleighing. We are having balmy weather here just now; in fact, all through the northern part of the country, as you undoubtedly have noted by the weather reports, and operations have ceased except skidding in the woods.

"Up to the present time there has been no logs put in at the mills in the northern manufacturing district, embracing the country in the States and Canada north of Cincinnati. While there were a few days of cold weather in December, the weather at this time of writing is a great improvement on the ordinary December weather of southern California—mild, balmy, and no overcoats, except in the evenings.

"In the Southern States the weather has been a little more favorable for lumbering, but still at this season of the year many of the mills are closed down for the holidays, and consequently the production is light. The stocks, both north and south, at the mills have been depleted to almost the vanishing point, so that there is practically no stock on hand of any description at the manufacturing centres.

It is, of course, too early to figure on next season's business, but the consumers of cooperage stock are already trying to contract ahead—not only the large consumers, but even the small apple barrel coopers—so that evidently they are figuring on a short crop of stock for next season.

"The demand for stock at this season of the year, of course, is lighter than at any other season, but still the manufacturers find it difficult to supply the demand, although it is extremely small, as is usual at the end of the year.

"The past year has been a fairly remunerative one for the manufacturers of cooperage stock and the coopers, and there seems to be a growing confidence between the producer and the consumer, which is certainly conducive to better business conditions than where the two parties are antagonistic.

"The outlook for next year is very good, as business does not seem to be disturbed to any appreciable extent by the political situation. The manufacturers are increasing their outputs all along the line, consumption is increasing, and consequently general trade throughout the country is excellent.

"It is difficult to figure on what prices for cooperage stock will be for next season, as the manufacturers do not care to contract to any extent until they have their logs and bolts on the premises, and the consumers do not feel like contracting to any extent on the basis of present prices. We feel, therefore, that it is not safe to prophesy very much at the present time, and that we would be better prophets a month or six weeks from now than we are at the present time.

"The demand for tight cooperage stock continues heavy, the production is comparatively light, and prices remain steady. Contracts for next season have already been made to a considerable extent, and, as most of this business is done on long time, stock being bought for from three months to a year ahead of the actual requirements, most of the manufacturers are pretty well booked up for all they care to sell at the present for next season's delivery. The general opinion among the producers of light barrel stock is that 1913 will be a banner year for this industry, provided the manufacturers can get the timber in to produce the stock."

#### B. C.'s Forestry Administration Plans

Formal announcement of the administration scheme for the Forestry branch of the British Columbia Department of Lands may be expected in the near future. A conference of provincial forestry

officials will be held in Victoria soon to hear and act upon reports of the men who have been studying the field with a view to arranging for the various divisions, the jurisdiction of each, and the system for keeping records of the service. No detailed announcement of the number of divisions of the forestry service to be established in the province can yet be made. The forestry officials are studying the needs of the province and working out a method whereby those in charge of the various offices will be relieved of routine clerical work.

### A Good Year at Lindsay, Ont.

Mr. John Carew, the well-known lumber manufacturer, of Lindsay, Ont., reports that 1912 was the best business year he ever had. The indications also are that the year 1913 will be even more satisfactory than that which has just passed. In order to be prepared for a large increase in business Mr. Carew recently acquired the limits of the Cavendish Lumber Company, of Lakefield, Ont., comprising over 20,000 acres, which, with his present holdings, will total somewhere in the neighborhood of 40,000 acres. Mr. Carew is operating four camps himself and also has four jobbers at work this winter. Altogether the camps are employing over 200 men. In addition to other lines, Mr. Carew's camps will take out a large quantity of white pine which is expected to keep his large mill at Lindsay, Ont., running to full capacity throughout the season.

### Wood Markets of the Far East

A United States trade report from Honk Kong, China, says: The Far Eastern importers of Pacific coast lumber are not buying great quantities at present owing to the increased export price and the high freight rates, which have been nearly doubled for future delivery. The stock on hand is estimated at about 1,150,000 board feet, and to this should be added 350,000 as unfulfilled contracts, a portion having already been shipped. Altogether there is a sufficient amount of lumber for present needs, and there are certain inquiries for future delivery of 650,000 feet. There is a good trade in Pacific coast lumber the year round, as the daily sales of 10,000 to 12,500 feet testify. The present (November, 1912) market quotations are from \$25 to \$25.50 gold currency per 1,000 feet board measurement for planking and \$26.50 to \$28 for timbers ex-godown; but at present there is a slight temporary lull in the demand.

### A Sales Manager to His Men

In a letter sent to all of its resident and traveling salesmen, governing their official conduct during the coming year, the sales manager of a large firm of wholesale lumber dealers incorporates the following remarks:

When I sold a new stock it would always be for cash, and then it would be my pride to see if I could not get a cash payment to send in with the order by telling the man what a good impression it would make on the firm to send in a thousand or fifteen hundred dollars with the order, and as he had the money lying right in the bank, why not let me have it now? etc.

If I found a chronic slow payer among my trade I would try to cure him, and if I failed I would ask the president to try his hand at it, and if this did not work I would quit him because he, the merchant, is sure to fail unless he becomes a prompt payer.

I would not be a cutter of prices because I am convinced from past history that no cutter of prices is ever successful in any great measure, nor would my firm ever want to call me to any very important position if I were a price cutter, especially on little things, and also because there is no record of a price cutter ever becoming well to do.

I would study close economy in my expense accounts and be as careful of the firm's money as I would my own, doing my utmost to decrease the expense of doing business so far as my part of it is concerned.

I would never try to ask a man what he wanted, but always rather tell him.

I would tell each customer the name of my sales manager and how he is watching us and how pleased he would be to be of any service to the customer, and how delighted he would be to attend to any mail order, and to be sure to ask for him personally whenever he, the customer, is in town.

I would try to remember that there are a world of traveling men and but very few salesmen; hence, I would try to be a real salesman, as shown by my results. I would never speak ill of a competitor. I would never write a mean letter to my firm nor to any sales manager.

I would never be familiar with a salesman for a competing firm, and never ask him "how is business," for he would be sure to try to mislead me.

I would invariably keep my promises and if called off my time card would promptly notify my customers by mail.

I would try to be a good listener—many a lumberman likes to talk;

don't deny them this pleasure—and a good salesman is, at times, a good listener.

I would always be neat and clean in my attire. I would avoid burdening my firm with petty details lest they call me an "old maid."

I would remember that while I did not know it all about the business and my goods neither did my customer, and what I did know I would use to the very best advantage.

### A Good Liniment for Horses

One of the most important matters in connection with lumbering operations in the woods and also in the handling of stock at plants and retail yards, is that the horses employed should be kept in the best possible condition of health. Money invested in horses is like money invested in machinery. It must produce results in order to be justified, and if the horse is at all out of condition money is being wasted. Horses for all kinds of lumber work are subject to the hardest hauling under the most severe conditions and it is necessary to use great care in order to keep them always in a fit condition for work. Horses are always liable to sustain small injuries, which, if not attended to promptly may develop into lameness or disfigurement and this reduces the working capacity of the horse and impairs its value from a sale standpoint.

These facts are very well known to lumber operators and it is natural that all of them should keep on hand something in the form of a liniment to be used upon the horse at the first possible moment in case of injury or ill-health. One of the best liniments that can be used upon such occasions, and one which has made a splendid reputation for itself wherever it has been used is "Absorbine" an antiseptic healing preparation. This preparation assists nature rapidly in bringing about a cure for almost every serious class of injury or ailment to which a horse is liable. It produces prominent and complete results without blistering and leaves no blemish. One of its many distinct advantages is the fact that the horse can be kept at work while the cure is being effected. "Absorbine" is not a new lotion but a remedy of long standing which has been tried in all conditions and has many years of successful use to its credit. It is a highly concentrated liniment and only a few drops are required at each application. Readers of the Canada Lumberman who are interested in this matter would do well to write to W. F. Young, P.D.F., 424 Lyman's Building, Montreal, Que., for information regarding this excellent liniment.

### New Catalogue of E. Long Sawmill Carriages

The E. Long Manufacturing Company, Limited, Orillia, Ont., well-known manufacturers of saw mill machinery have sent out an excellent illustrated catalogue (No. 100), dealing with their standard and heavy duty sawmill carriages. The catalogue is published upon a fine quality of calendared paper, which shows up the illustration in splendid manner. Each of the carriages and parts catalogued is illustrated and a detailed description is included from which one may secure a good idea of its capabilities. Those who are interested in saw mill carriages will do well to write to the E. Long Manufacturing Company for a copy of this catalogue and are requested at the same time to mention the Canada Lumberman.

### Foreign Trade in Forest Products

Canada's exports of forest products for the seven months ending October, 1912, were valued at \$26,593,727. This shows a falling off of about \$600,000 as compared with the corresponding period of 1911 and of \$4,700,000 as compared with 1910. Compared with 1909 there is a falling off of about \$5,700,000. The following table shows the value of exports of wood and manufacturers of wood to the United Kingdom and to the United States during the seven months ending with September, 1912.

|                            | 1911.         | Total.        | 1912.<br>To United Kingdom. | To United States. |
|----------------------------|---------------|---------------|-----------------------------|-------------------|
| Wood and mfrs of—Total     | \$ 30,382,316 | \$ 33,279,003 | \$ 8,631,039                | \$ 32,353,130     |
| Logs                       | 416,892       | 601,107       | 44,731                      | 554,483           |
| Lumber—Deals, pine         | 1,056,887     | 1,147,717     | 1,081,072                   | 49,949            |
| " spruce and other         | 4,469,962     | 4,235,600     | 3,631,028                   | 557,275           |
| Laths, palings and pickets | 1,283,640     | 1,333,851     | 41,796                      | 1,274,085         |
| Planks and boards          | 12,519,534    | 13,163,928    | 1,263,159                   | 10,477,101        |
| Shingles                   | 1,022,555     | 928,096       | 90                          | 902,749           |
| Timber, square             | 653,180       | 1,168,030     | 147,247                     | 6,877             |
| Wood blocks for pulp       | 3,550,888     | 4,687,183     |                             | 4,687,183         |
| Wood pulp                  | 2,731,730     | 3,221,191     | 621,164                     | 2,573,472         |

### Great Britain's Wood Imports

Great Britain's imports of wood and timber during the eleven months from January, 1912, to November, 1912, were valued at £26,363,683, which is an increase of £2,125,281, as compared with the corresponding period of 1911 and £1,672,281, as compared with the corresponding period of 1910.

# THE WOODWORKER

## Veneers and Veneering

By A. O. Wilson

So much has been said on this subject that it may seem to many that further discussion is quite unnecessary, but it should not be dropped until there is a much better understanding of the many things which are quite necessary for all to know. I hope no one will get the impression that I think my head contains all there is to know about this very important part of furniture manufacture, but it does a fellow good to let off once in a while and then have the other fellow tell him some things he doesn't know.

The importance of this subject grows on us as we read and hear more about it, for we hear so much now from our great men about the preservation of our forests, and we see the forests consumed at a tremendous rate. While the demand is increasing for furniture woods, the supply is decreasing, and we are compelled to use veneer or else run the price up on good furniture—and some dealers are of the opinion that built-up stock is better than solid stock anyway, which, of course, it is, for some purposes. But I believe competition in prices has more to do with the use of veneer than the stability of the furniture, except in specific cases, for one cannot go through an up-to-date furniture store without seeing imitations of high-priced woods; and the fraud works pretty well, for only an expert can tell the difference without a very close examination.

Thus far I have tried to make it plain that the question of veneers is a vital one and becoming more so all the time, and having done this I wish to say something about the art of veneering, for it certainly is an art. The building of the core has been discussed at length, and we think we understand that pretty well, but we are only beginning to understand the facing of it. C. J. Louis, in a recent article entitled "Glue Room Talk," is on the right track sure, and if he only follows up his lead he will find many interesting things. He thinks built-up stock, say of five-ply or more, should be glued and pressed separate from the veneer, with less glue and less pressure for the face veneer, and if the stock were run again before the face is put on, as he suggests, we would avoid what we find so many times in finished varnish work. This defect is called "blister." You can find the blisters by tapping lightly with the ends of the fingers on top of the face. When you touch the spot it sounds like tapping on an empty egg-shell. Examine it closely and you will find there was a low or hollow place in the core at this point, and if not filled full of glue you now have an air-cell under the veneer. But, you say, it is small and will do no harm. But ask your wood-finisher about it, and if he is a practical man he will tell you that where the veneer is very thin, as is the case generally, the air soon loosens the varnish and the result is a bad finish. It looks sometimes as though it had been bumped, but of course the price we are to get for the product of the factory will determine whether we can stand for any extra operations in the mill or not.

Then as to the effect of too much glue, on the appearance of the finished product. One writer has said it would show through in streaks after it had aged a little. This is no doubt true in some cases, as in mahogany, maple, sycamore, ash, birch, or in almost any of the delicate woods, but in walnut, golden oak, or the many kinds of "missioned" oak, this will hardly ever develop to a serious degree. It should be remembered, however, that these woods will grow darker with age after they are finished. For example, golden oak will be much darker and duller in finish at the end of six months or a year than it was when first finished. And then sometimes a veneered piece of work is uneven when it is taken from the press and sanded, and the face is almost cut through in places, so that if it happens to be over a core of soft-wood, the pressure used in finishing will penetrate the face and color the core, so that there will of course be darker places that might be mistaken for glue coloring. This would only be prevented by a heavy body of glue under the veneer.

Here is another very important point, which may seem a contradiction of the foregoing statement, but it will be found, if read aright, to be in harmony with the above. That is, in regard to the use of too much glue in putting the face on. I shall never forget my first lesson in veneering, when I attempted to put some thin walnut veneer on for a facing on soft-wood core. As this was my first, a sure job it must be, so on goes lots of glue, and then some more for good luck, and then it was put under a good pressure for two or three days, as I was not in a hurry. When taken out the glue had soaked out through the face in some places. But I scraped and sanded until it was in fine shape for stain, and then, oh, my! did you ever pour water on a duck? Well, this was worse, for the stain would run off the glue-soaked places and leave them white, while the other parts were al-

most black. And you will find this to be true in almost every case where too much glue is used on thin veneer; the pores of the wood will be sealed, and the finisher will have a mighty hard time to get any color to his work. So if any good brother thinks he is a furniture-maker, he is badly mistaken unless he knows a great deal about finishing also, for he may be doing the very things in the cabinet department that will be the undoing of the finishing room.

One thing I would like some good, practical veneer man to give us light on is: You know there is a great tendency in crotch mahogany, and sometimes in oak and other woods too, for the veneer to check open and raise up on edge after it has been varnished for some time—sort of sits up like a pompadour hair-cut, and spoils the whole thing. I have seen thousands of dollars' worth of furniture spoiled in this way, but am ignorant as to the cause or the best remedy. The president of a cabinet company told me that he had trouble of this kind with certain kinds of work. He took the wood just before sanding for the finishing room, and dipped it in a glue size of fifteen per cent. glue and eighty-five per cent. water. After it was dried he sanded and finished it, and had no more trouble. His idea was that the glue set the grain of the wood without interfering with the stain in the least. But I am afraid this would not work well in all cases, and would advise that the finisher be consulted before it is tried to any great extent.

Another manufacturer said he used a thin cloth in veneering with crotch mahogany, laying it on the core and then laying the veneer on top of that, and that it was a great thing to prevent checking; but that doesn't look good to me. However, I have never seen it tried and would like to hear what others have to say about some of these things.—The Wood-Worker, Indianapolis.

## The Young Filer's Troubles—Cracking

By C. Hapsburg Liebe, in Berlin Quality

There is nothing in the calendar of mischief that will cause the beginner to think of the back to the farm movement quicker than persistent cracking of his bandsaws. As I am fond of saying, perhaps, a fracture now and then is only in line with good work on the machine; but when it gets to be a thing requiring frequent brazing, it is heart rending. I say the latter advisedly; I have been there.

Of the question of cracking in bandsaws, one may set forth a few of the whys and wherefores in: their causes, their prevention, their treatment.

Considered on the surface, a stiff place along the edge is a fruitful source of fracture. This condition, however, is always noted after the crack has developed, and the stiffness is usually caused by the letting out of the tension inward from the crack. I used to think that stiff, or tight places under what would have been properly speaking the tire, caused more fractures than anything else.

But later experiences and experiments have led me to believe a little different from that theory. Cracking will result from that condition, but not so much as it will from other causes, away up at the top of them being irregular tension.

Too near the edge with the tension is a fruitful source of fracture; and in this one must be guided by good judgment and keep a little farther away with his rolling. Even when he tensions the proper distance from the edges, if he puts the roll down too hard at the tire he brings to bear undue and unnecessary strain on the rim, and fracture may come as a result. A dished place, pounding as it must, through the guides, will cause cracking; so also will a wire lump; if it is let go too long.

If the guides are made of metal that is too hard, or of metal that glazes from the rubbing of the saw, or if the guides are of the right kind of metal and set out of line, fracture may be expected. In my experience, I have found that endwood makes a splendid guide. The next best thing is good babbitt metal. Guides made of brass and composition metals will bear watching.

The wheels themselves may cause fracture by becoming worn badly. Also, if they have been turned badly—by a tool that digs, especially—they are very hard on saws. Owing to the proneness of tools to work unevenly, the best authorities are advocating the use of the emery wheel for truing band wheel faces. But worn wheels, it may be well to mention, have more of blame to bear than have wheels that have been turned out of true.

It is a well known fact that case hardening will result in cracking. The case hardened surface is in reality little more than the thickness of thin paper; but even that is often enough to start the devilment, a sort of invitation. To prevent this evil, rub the backs off with a piece of emery wheel now and then, while the saw runs

slowly; in the grinder use a wheel of the proper grit and grade and kind and grind evenly and not too hard.

Sharp throats, throats that have too little room in them to chamber the dust, too much mill-strain or too little mill-strain, too high speed or too low speed, saws too thin for very hard wood or too thick to stand the bend of a small wheel, vibration, carrying the crown idea too far, about complete the category of fracture causes.

The old axiom to the effect that a little of prevention is better than much of cure holds mighty good in this feature of saw practice that I am writing about. Start a saw right. When the new band is taken from the case, it should be wiped off on both sides, placed on the bench, and gone over for the purpose of removing all bends resulting from the close confinement in the box.

Usually, the best sawmakers put out a product that will stand one run from the case, once the bends mentioned have been removed. So the new saw may be allowed to make a run, after it has been put in the brackets about the grinder for a look at the swage. Most sawmakers send out saws with far too wide spread, which is to show that the steel is of such quality in temper and make-up that it will stand swaging readily.

But let that initial trip of the new blade be a short one. Put it on the bench and you will find that the tension is now very irregular—because a new saw is sensitive and will pull and change more on the first run than it will again in a single trip. Help it to find itself. Handle it carefully. The next time it may make two runs before going on the bench. After this, it will have settled pretty well into its stride. An observance of the foregoing will mean that fewer good saws will be returned to the sawmakers as defective.

As to the treatment of cracks, once they have made their appearance, with good care and judgment one may carry a fracture, if it does not go too deep, for a long time. Now and then one may even wear a front edge crack out with the grinder. First, of course, the fracture should be punched to arrest its progress into the blade. There are many kinds of punches; the centre-punch kind, the half-moon, the straight-cutting—which is but a cold-chisel. Then, too, there is the crack drill. I have had little experience with the latter.

My favorite is the centre-punch variety. And those who have trouble with this method of stopping cracks usually set the point of the little tool too high up on the crack, which only splits the saw farther down and aggravates the case. The crack surely goes farther into the saw than it appears to the natural eye; so one should set the point of the punch lower than the place where the fracture seems to end.

I have had good results by punching twice on either side of the punch that I had placed at the bottom of the crack, these latter running slightly toward the middle of the saw, making a crescent-shaped marking, with the bow turned outward. The saw should then be tensioned and leveled correctly keeping the same distances from the bottom of the crack that one does from the edge at any other point. And if you are using a half-moon punch, try turning the bow of it outward instead of inward.

### Shop Wrinkles for the Machine Woodworker

By C. H. Brown

Don't stop a panel or other piece of work in a sander and expect to have the work come out nice and smooth. It is more than probable that the paper will cut a groove in the wood at whatever place the work stops while over the drums.

Don't pull a cut-off saw through the work so rapidly that the saw has to break off the wood instead of cutting it smoothly. No amount of careful fitting will get a saw to cut cleanly if the feed is more than the number of teeth can take care of. Use the Italian system, the up strokes heavy and down strokes light.

Don't run a saw for ripping until the set or swage is worn too close and try to make up for the poor condition by muscular exertion and an assortment of cuss words. Neither will help matters very much when a saw is out of shape.

Don't pour oil all over the top and sides of a box and a little dribble of it in a small hole for the journal and expect the box to keep cool by the process of absorption from the oil on the outside. If the maker of the machine has made only a small hole in the cap as an evidence of good faith, so that it may be seen that there is a journal there, have originality enough to let the journal realize that the refresher has come its way.

Don't make a lump in the belt at the joint. If lacing must be used, try to make a decent joint and not have it look like a woman's tie in a sheet holding a week's washing. One of the first evidences of a poor mechanic's work is in lumpy-looking belts.

Don't run narrow stock on a wide machine long enough to have the knives worn bumpy in spots from filing only in one place. If it is objectionable to use short knives on a long cylinder, change the place of the guides and side-heads to a fresh position on the long knives.

Don't think that because a shop is small the boiler and engine

can be run in just any old way as long as there is a shovelful of some kind of fuel in reach. People do that or its equivalent and live to tell the tale while others miss the combination and go to a place that is hotter than this.

Don't allow a box on the line shaft to work loose on the frame or on the pivots. If the box persists in getting loose, better examine the shaft for alignment and get it right. A shaft out of line increases the consumption of power very fast and causes an increase in the wear of all the belts hung to it.

Don't let the shop get so dirty and littered up with scraps that it requires as much effort to climb over the stuff as it does to do the work. Have a regular time to clean up the cull pile and don't let it overflow half of the shop. It costs money to have men stumbling over a pile of trash to get at the work and machines.

Don't wait until there is a breakdown before buying a small bolt or other small necessities for minor repairs. The time lost usually amounts to more than the whole job would cost if done in proper time. The time to make these small repairs is just before the break happens. It can easily be done if the man in charge is onto his job.

Don't let the ends of stock lap in feeding a resaw unless the stock is of the same thickness. It is likely to make rough-ended work and does not do a saw any particular good to have a short end rattling against the blade. Not much time is made by this way of sawing.

Don't cut down one pattern of knife to make a cutter for some other mold if the knife is for regular stock. This practice is more general than is commonly supposed and should be severely condemned by owners who are really responsible for most of it.

Don't let the gage glass and cock connections become so badly choked up as to be useless for the purposes for which they are intended and then depend upon a small leak somewhere in the outfit to indicate the water level. Don't smile when you read this, for it is a fact that one large planing-mill has followed this practice for a long time and a "mysterious" boiler explosion would not be a surprise to me if it occurred there at any time.

Don't forget to give the bottom valve of the collector enough opening to make the shavings feed freely to the furnace when using the feed to the furnace direct from the separator. A choke-up in the feed pipe is frequently caused by neglecting this valve.

Last, but not least, don't neglect to take and read the best books or papers you can get that cover your line of work, and if you cannot buy all of them, don't hesitate to borrow from those who do buy, until you form the reading habit and get in a position where you can spare enough money from your other needs to pay for the reading.—Wood Craft.

### The Safest Way

In installing new machinery or equipment it is best in all cases to be on the safe side by seeing that everything is right and properly adjusted before starting. A little incident brought this to my notice a day or two ago. Two new bearings were being put on the line shafting in different buildings of the same plant. Both were just alike in every respect. The first one put up was in line and right every way, as far as could be seen. It was a ring oiler, and properly filled with oil, but it had not run more than an hour when it was smoking hot, and upon examination was found to be melted so it could not be used till it was babitted over again. The man who put it up said the bearing was no good.

A couple of days after I put up the other new one myself. Before putting the bearing in the hanger, I tried it on the shaft and found it badly edge-bound. I scraped the edges free, put it up, and it has never even got warm. If the other bearing had been freed on the edges it would have been all right. These ring oiler bearings are the best made, I think. They are made to fit standard sizes of shafting, but should be fitted a trifle before putting on, and then will give no trouble.

The same principle applies to any new machinery. Of course, the bearings are supposed to all be properly fitted before leaving the factory, and generally they are, but it is best to try them and see that they are right before starting, since a careless machinist may have left them a little edge-bound, or the cap too tight, with the consequence that the bearing gets hot so quickly that the metal starts before it is observed, and then it is too late to save it.

There is nothing more edifying to a good mechanic than to see a nice new machine set up and started, then run week after week without a single hitch, doing its work well and proving to be a credit to its makers and to the man who is overseeing it; but when a machine goes to the bad, and first one thing and then another goes wrong, parts are broken and bearings melted out, one begins to think there is something wrong with somebody's think box, and it ought to be scraped or rebabbitted, an extra liner put in and the screws tightened down, and then perhaps the other machine would work better.—G. H. H. in The Wood-Worker, Indianapolis.

# WANTED & FOR SALE DEPARTMENT

## PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (\$2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

## WANTED—LUMBER, ETC.

### Pine and Spruce

Wanted for next year's delivery cars, or cargoes No. 1 Pine Culls, also Spruce. Apply Box 671, Canada Lumberman, Toronto, Ont. 1-2

### Wanted

A large quantity of good hard maple billets, 2½-in. and 3¼-in. square, 48-in., 54-in., 60-in. 66-in. and 72-in. long. J. H. Still Mfg. Co., Ltd., St. Thomas, Ont. 1-2

### Box Factory Lumber

When you have any box lumber to offer, write us, giving quantity, description and price Chicago, delivered either water or rail. Chicago Mill and Lumber Company, Chicago. 1-4

### Birch Logs Wanted

Wanted about 500 logs, Prime Quebec Birch, 18 inches and up. Quote F.O.B. Box 711, c/o Goulds Advt. Offices, 54 New Oxford Street, London, England. 23-2-82

### Birch Veneer Wanted

In one-eighth inch thicknesses, cut to sizes specified. For boxing purposes. Large quantity required. Quote. C. A. Spencer, Eastern Townships Bank Bldg., Montreal. 2-2

### Wanted

One million feet 4 x 4 to 8 x 8 Maple, Beech, Birch or Elm Squares. Will accept hearts of knotty stock, for rough work. Delivery now or during 1913. Box 638, Canada Lumberman, Toronto, Ont. 22-1-67

### Wanted

500,000 ft. Maple squares 1¼-in., 1½-in., 1¾-in., 2-in., 2¼-in. and 2½-in. Any length from 12-in. up. Car lots and upwards. M. Mitchell, P. O. Box 204, Lucknow, Ont. 2-5

We use yearly five hundred thousand to one million feet of Birch, Basswood and Ash in our business and are open to contract with responsible mill men for same. We would be willing to advance money on the logs and also on lumber as sawn. Write us, Manufacturer, Box 619, Canada Lumberman, Toronto, Ont. 20-37 T.F.

### Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

### Birch Wanted

Want 200 M. ft. 10/4 1st and 2nds and No. 1 Common Birch. Give average widths and lengths and percentage of 14 and 16 ft. lengths. Want price delivered Philadelphia, Pa. and New York City.

Want 200 M. ft. 6/4 No. 1 Common Birch delivered Boston, Mass.

Want 5 cars 4½ in. and 5 in. 1sts and 2nds. Birch delivered New York City and Philadelphia, Pa. Reply Box 526 Canada Lumberman, Toronto, Ont. 14 T.F.

### Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Box Co., Ltd., Toronto, Ont. 7-tf

### Hardwood Pickets Wanted

Beech, Birch and Hard Maple.

1 x 1 x 42.

1 x 1 x 48.

1 x 1½ x 42.

1 x 1½ x 48.

1 x 1¾ x 42.

1 x 1¾ x 48.

Require Thickness, 1/16-in. Plump.

Quality—Free from all defects.

Can take delivery of green or dry stock.

Apply to The Canada Wood Specialty Co., Ltd., Orillia, for full particulars, price, etc. 24-1-TF

## Logs Wanted

Reliable Canadian firm wanted to stock Western Ontario mill. Any kind of logs will be accepted on basis of sawing by the thousand. Will also buy several thousand feet of logs on cars. Good shipping facilities on Grand Trunk. Box 662, Canada Lumberman, Toronto, Ont. 24-3-9

## FOR SALE—LUMBER, ETC.

### For Sale

50 000 sets Red Birch Wagon Hubs, turned and mortised to patterns. Correspondence solicited. Address Box 686, Canada Lumberman, Toronto, Ont. 2-3

### For Sale

About 23,000 ft. of Oak Corbels, 6-in. x 10-in., 8-in. x 14-in. and 8-in. x 16-in., 12/16 ft. long; square edge and sound timbers. Massey Harris Company, Limited, Toronto, Ont. 1-6

### For Sale

Birch, 6/4, 8/4, 10/4, 12/4 No. 1 Common and Better. Elm, 4/4, 12/4 No. 2 Common and Better. Maple, 8/4 No. 1 Common and Better. KNIGHT BROTHERS CO., Burks Falls, Ont. 2-2

FOR SALE.—One Hundred Million Choice British Columbia Timber. Cheap. No cash required. Terms over ten years. Excellent lumbering chance. Wire for particulars. John Sanders, 964 Seventh Ave. West, Vancouver. 2-5

### For Sale

Two hundred thousand feet of Yellow Birch, 6/4 and 8/4, 5-in. wide and up, 10 feet long and up. Delivery to commence in January. Boston rate of freight 14c per hundred lbs. John S. Eagles & Co., 39 Canterbury Street, S. John, N.B. 1-2

### For Sale

50,000 ft. 3-in. Soft Maple, No. 1 Common and Better. 20 000 ft. 2-in. Soft Maple, No. 1 Common and Better. 100,000 ft. 1-in. Soft Maple, No. 2 Common and Better. Choice, wide, dry stock. Apply ROBERT BURY & CO., 79 Spadina Avenue, Toronto, Ont. 2

### Lumber For Sale

400,000 ft. 3 x 7 and up Merchantable White Pine. 200,000 ft. 2 in. Merchantable White Pine. 200,000 ft. 1½ in. Basswood, Log Run. 500,000 ft. Hard Maple, 1 in. to 4 in. Apply to

GEO. C. GOODFELLOW,

Montreal, Que.

### For Sale

125,000 ft. 1-in. M.R. Maple; 25,000 ft. 1-in. M.R. Beech; 10,000 ft. 1-in. M.R. Oak; 35,000 ft. 1-in. M.R. Pine and 300,000 pcs. 1½ x 48-in. No. 1 Spruce Lath. The Rathbun Co., Deseronto, Ont. 1-3

### For Sale

200 M. ft. Hemlock. Can be cut to order. Several cars telephone poles; also square Birch, Beech, Maple and Elm from 3 x 4 to 10 x 10, 10 to 16 ft. long or longer. 4 ft. slab wood and sawdust. Hall Bros., manufacturers and wholesalers, 174 Mutual street, Toronto, Ont. 24-98 t.f.

### For Sale

500,000 ft. Maple squares, 1¼-in., 1½-in., 1¾-in., 2-in., 2¼-in. and 2½-in. Any length from 12-in. up.

Car lots and upwards.

M. Mitchell, P. O. Box 204, Lucknow, Ont. 23-2-79

### FOR SALE—BAY POPLAR

At our Ayden Mill, freight rate to Norfolk, Va. 8c

Baltimore 15c

Philadelphia 16c

New York City 20c

Boston 23c

We offer 400 M feet 1 x 6 in. and wider bay poplar, thoroughly bone dry and straight, good widths and lengths, beautiful stock, piled for 1st and 2nds, but will likely down grade in shipping about 20 per cent. No. 1 common. This stock is cut heavy and most of it would dress two sides 1 in. thick. For quick shipment will quote special prices.

AMERICAN LUMBER & MFG. CO.,

24-3-99 Pittsburg, Pa.

## FOR SALE—MACHINERY, ETC.

### For Sale

Good boiler, 72 inches by 14 feet, 72 4-in. tubes, 75 h.p. engine. All in good condition and ready for immediate shipment. Will accept lumber in exchange. Apply to Box 657, Canada Lumberman, Toronto, Ont. 24-3-3

### For Sale

One fore and aft, compound, direct acting, surface condensing Marine Engine. High pressure cylinder, 14¼-in. diam. Low pressure cylinder, 26-in. diam. Stroke 18 inches, with condenser attached. In first class order. Apply Saint John Iron Works, Limited, St. John, N.B. 1-4

### Saw Mill For Sale

Huntsville Lumber Company, Limited, will in the future only run one of their two double cutting Band Mills, which is now cutting fifty thousand feet per day.

They will sell the same with engine, boilers and all other machinery along with building. Also will sell blacksmith's tools and a number of saw-log sleighs and chains.

Huntsville Lumber Company, Ltd., 22-42 T.F. Huntsville, Ont.

### Mill For Sale

We have for sale a mill composed of the following machinery:

1 Band Mill, 8-ft. Wheel.

1 20-ft. Log Carriage, 3 48-in. Blocks.

1 Steam Feed, Steam Nigger, Steam Log Loader.

1 Upright Band Resaw.

1 Horizontal Slab Resaw, 60-in. x 8-in. wheel.

1 6 Saw Murray Edger.

1 9 Saw Automatic Trimmer.

1 5 Saw Slab Slasher.

1 Refuse Burner.

1 Lath Machine.

1 Lath Bolter.

Filing Room Machinery and other Machinery necessary for complete Saw Mill.

Write for complete inventory. Will be sold cheap.

BAYFIELD MILL CO., Bayfield, Wisc.

2-5

## WANTED—EMPLOYMENT

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

As manager of saw mill, three years' experience. University education; executive abilities. Box 681 Canada Lumberman, Toronto, Ont. 2-3

A young lumber salesman of real merit will be at liberty March 1st. Commission or salary proposition. A rare opportunity to acquire a high grade man. Box 682 Canada Lumberman, Toronto, Ont. 2-2

WANTED—By practical experienced man, position as manager of lumber or pulp operations. Can handle any kind of proposition from stump to market, including financing. Highest references. Bond if required. Reply Box 663, Canada Lumberman, Toronto, Ont. 24-2

## WANTED—EMPLOYEES

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents

A Band Resaw Filer, yearly position. Reply Edouard Ruel, Lauzon Levis, Que. 1-3

Experienced mill managers looking for positions are requested to read the announcement under Box 676, on page 53. 1-3

WANTED—First-class lumber salesman. State salary expected, experience and age. Apply Box 678, Canada Lumberman, Toronto, Ont. 2-5

## BUSINESS OPPORTUNITIES

### For Sale

Three townships heavy timber. New gang and band mill. Best proposition on the north shore of Lake Huron. Apply Box 672, Canada Lumberman, Toronto, Ont. 1-2

### For Sale

Timber limit, containing 20,000,000 feet mixed timber. Latest improved saw mill, new; capacity 30,000 feet lumber in 10 hours, logging this winter 2,000,000 feet. Apply Geo. S. Nesbitt, Rupert, Que. 24-2-2

### Timber Limits For Sale

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest, if your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. tf.

### For Sale

Established Lumber Business, with first-class mill, now running full time. Timber limits with 20 to 30 million feet of standing pine timber conveniently located, and all merchandise, etc. Price \$55,000. This is worthy of investigation. Address Box 332, Canada Lumberman, Toronto, Ont. 19-22-t.f.

### For Sale

About six acres of pine timber, en bloc, in logs or as lumber. Some oak, chestnut, walnut, maple and basswood. Sawmills at Beamsville and Grimsby, 2½ miles distant. On H. G. & B. electric line; half mile from Grand Trunk. H. H. Dean, Grimsby East, Ont. 2-2

### For Sale

Established lumber business with first class sawmill, extensive planing mill, a sash and door factory, a flour mill, all modern machinery and equipment. Good timber limits; cedar, pine, spruce, birch, maple, etc. Good roads. Mills conveniently located, near railroad and wharf. First-class water power. Address James Roy, St. Ulric Riviere-Blanche, Ce Matane, Que. 1-3

**For Sale**

Saw Mill and fifty-three miles timber limits in County of Bonaventure, Quebec Province. For further particulars apply to J. D. Sowerby & Co., Oak Bay Mills, P.Q. 22-711f

**MISCELLANEOUS****For Sale or Trade**

Two hundred acres hardwood bush, District of Parry Sound. Small mortgage of \$1,000 against it. What will you trade?  
B. J. McCORMICK,  
Welland, Ont.

**Vanderbilt's \$680,000 Profit on Timberland.**

George W. Vanderbilt invested \$136,000 twenty years ago when he bought for \$2 an acre 68,000 acres of mountain forest land, most of it along the Transylvania branch of the Southern Railway. This fall Mr. Vanderbilt sold the large timber from the tract for \$12 an acre, or \$816,000. He made a profit of \$680,000 on his investment, and he still has the land and all timber under 14 inches. This is an example of profits on a large scale from Southeastern timber lands.

The purchasers are given twenty years to remove the 25,000,000 feet of lumber estimated to be on the tract. It is agreed that the timber shall be cut with a view to the proper conservation of the forest.

The lumber will be manufactured at Pisgah Forest station on the Transylvania branch of the Southern Railway, where the purchasers of the big timber tract will erect a mill. Wood waste has been purchased by the Brevard Tanning Company.

**Sugar From Wood.**

According to recent press dispatches from London, England, the production of sugar from wood is in a fair way of being established on a commercial basis. One of the telegrams on the subject discusses with considerable enthusiasm the new extracting process, after this manner:

British chemists are enthused over the fact that experiments have resulted in a discovery which it is said may revolutionize the sugar refining industry. By a new chemical process the manufacture of sugar from wood and sawdust has become an accomplished fact. Large quantities of the commodity actually has been produced and it is said that arrangements are in hand for the establishment of factories throughout England for the exploitation of the process.

"Sacchulose" is the term applied to the new product. The results obtained are what are called "classed process," in which sawdust is subjected in closed retorts to digestion with a weak sulphurous acid solution, and under the pressure of about 90 to 100 pounds to the square inch ef-

fective transmutation takes place. Of the resulting product 25 per cent. is sugar. The constituent sugar so formed is dextro in part and fermentable to an extent of 80 per cent. The rest is not fermentable.

Horses fed on quantities of the new sugar increased in weight 70, 30, 35 and 65 pounds, respectively.

**Purchase of Poles for 1911.**

Preliminary report for 1911 issued by the census bureau shows that the number of poles purchased by telegraph and telephone companies, steam and electric power companies in the United States was less than for 1910 and 1909 by 452,674 and 320,720 respectively but exceeded the total for 1908 and 1907 by 168,866 and 134,752 respectively. The total reported purchase in 1911 aggregated 3,418,020, of which 70.3 per cent. were made by telephone and telegraph companies, 23 per cent. by electric railroad, light and power companies, and 6.7 per cent. by the steam railroads, says the Hardwood Record.

The decrease in the 1911 totals as compared with that for the preceding year was confined entirely to a falling off in purchase by the telephone and telegraph companies and steam railroads. On the other hand, a substantial increase was shown in purchases by electric railroads and electric light and power companies. The decreases in 1911 in purchases as reported by the telegraph and telephone companies was not general, being confined in the main to states in which there was no more than usual activity in the construction of telephone lines during 1910.

During the period of five years covered by the report, the total pole purchase was 17,559,876, of which white cedar contributed 64.2 per cent.; chestnut, 17.8 per cent.; oak, 5.3 per cent.; pine, 4.5 per cent.; cypress, 2.4 per cent. These five woods furnished 94.3 per cent. of the total, but the tendency has continued to substitute less expensive woods for these five. Other woods used are redwood, osage orange, and locust.

**Seeks the Cream of the Oak Forests.**

Oak veneer has been growing in popularity for more than a decade and it has spread out very rapidly the past few years in both plain rotary cut and in the quartered veneer. By its use manufacturers present the beauties of the oak strikingly and at the same time, improve the structure of the furniture, provided they use it rightly. Manufacturers of veneer are becoming more conspicuous as contenders in the market for the best oak stump-

age. Just a few years back the tight stave barrel people were regarded as the most formidable competitors of the saw mill men for the best oak timber and they devoured, at a great rate, the cream of many oak forests—at times leaving lots of good timber going to waste in their wake. There are some of them after oak timber yet, but the stave business, which called for the highest grade of oak, has been dragging so for the past year and a half that there has been little seeking for fresh supplies, except by a few fortunate members of the trade who own timber. When the veneer man goes into the woods, he must take a saw mill along, as a part of his plant; or he may stay in the city and buy logs and flitches. Some buy the quarter flitches; others buy logs for both rotary cutting and quartering; still others by timber and have their logs gotten out; some do it one way some another, and with it all the veneer man is becoming one of the most important factors in the scramble for the good oak timber that remains. He is not so conspicuously after it now as he would be if business were a little livelier but he is beginning to overshadow the oak stave man and, if he keeps growing in prominence, it looks as if the time was coming when he will overshadow everyone else in point of prominence where the

cream of the oak forests is to be found.

Old Towne, Maine,  
U. S. A.

# Good Opportunity for Progressive Canadian

Capable mill manager wanted to take charge of a large timber limit and manufacturing establishment in Quebec Province.

The owners of this limit intend manufacturing lumber and sulphite pulp on a large scale, and require the services of a high-class capable Canadian who thoroughly understands all departments of a sawmill business, viz., the woods, labor, manufacturing and shipping.

Splendid opportunity for a good man. All applications treated confidentially.

Apply, giving full particulars regarding experience, to Box 676, CANADA LUMBERMAN AND WOODWORKER, Toronto.

# Review of Current Trade Conditions

## Ontario

As stocktaking has followed the holidays, very little business has been transacted during the last fortnight, although wholesalers have been able to purchase some small quantities of desirable lumber at reasonable prices, as the sellers did not want to take this lumber into this year's stock. From now on, however, trade is likely to become brisk again.

The almost complete absence of snow has prevented hauling in the woods, and for this reason lumbermen have been wary in accepting many orders, and unless a good fall of snow arrives very shortly, the supply is likely to be seriously affected.

Owing to the present general high prices, very little lumber is being sold for forward delivery except for cash, and buyers are mostly purchasing only for their immediate requirements.

No further change in prices has taken place. In soft woods, hemlock, white pine mill culls and spruce are in the greatest demand. In hardwoods, the low end of birch, 2 and 3 common in particular, is very scarce, as are also dry soft elm and good dry ash. There also does not appear to be much dry basswood offering.

## Eastern Canada

The indications at present point to an excellent year for the lumber trade of Montreal and for the industry in general throughout Quebec. In the city of Montreal, during the past twelve months, building operations increased in value, according to the permits granted, by over \$5,000,000, as compared with the year 1911. It is expected that a further increase will take place during 1913. The lumber trade at present is keeping up in a satisfactory manner, according to the reports of wholesalers and retailers. The open weather stimulated the demand for lumber until the close of the year. The quantity of business transacted during December is reported to have been much larger than during the corresponding month of 1911. Stocks at present in Montreal are low. The pulp and paper situation in Quebec is unchanged with ground wood at low prices on account of the quiet demand, and chemical pulp at high prices on account of the shortage in the United States.

Prices of Eastern spruce at New York are held firmly, although business is not so active as it was a few weeks ago. Supplies at mill points are scarce. Local yards are fairly well supplied. No price shading is expected at the opening of the spring trade. Hard wood prices are strong at New York, although a noticeable falling off in the demand is reported. Indications are that the spring trade, both foreign and domestic will be good. Birch and maple are holding their own and a satisfactory trade is reported in ash and basswood. Hemlock prices continue firm at New York. Mill stocks are reported scarce and a shortage is expected in the spring. Inquiries for early spring shipments are reported in the market.

Eastern spruce at Boston has been quite active of late. One large Boston wholesale firm is reported to have contracted for the entire cut of a large northern mill for January, February, March, and April at a price which is supposed to be the highest in many years. It is understood that they agree to take the whole cut at a base price of \$27., less 5 per cent, on a Boston rate of freight delivery. Small dealers however, are reported to be offering frames at \$26. In this case, however, the schedule must be made up to the dealers satisfaction. Trade in hardwoods at Boston has been quieter although prices are high. Plain oak is being quoted at the highest price in many years and is scarce. Quarter oak also is held at firm prices. Maple is firm and scarce especially in the higher grades. Hemlock is unchanged at Boston, dealers declaring that it is too high to enable them to handle any quantity. The trade in shingles is quiet with prices unchanged.

Logging conditions in New Brunswick up to the present have been most unsatisfactory. Much rain fell throughout the summer and fall of 1912, and now the woods are practically impassible in many sections. Men are scarce and wages are increasing. In the early fall the wages were around \$30; now they are about \$38 per month and \$40 for choppers. On account of the wet woods the work of yarding logs has been greatly impeded. In many sections operators have been forced to work on the ridges and abandon the swamps.

The immediate outlook for trade is promising. The English market for deals is good and ocean freight rates are not so high. Vessels have recently been chartered for 50s to 55s from Bay of Fundy ports. Stocks on the north shore and at St. John are only about half what they were a year ago, and it is reported that stocks at English ports are lower than they have been for many years. Deals have recently been sold for 1913 delivery at \$16 for a specification of 50 per cent. 7-

in. and 8-in. x 3-in., balance 9-in. and up, with the usual reduction of 3-in. x 4-in. x 5-in. and 6-in. ends and fourths. It is not expected that many owners will sell even at that price. Spruce boards are selling at \$14 at the mills. Hemlock is scarce and is all in retail yards. It is bringing about \$15. Low grade stocks of 1-in., 2-in. and 3-in. have all been sold at \$9 to \$9.50 in the yards. Lath are entirely sold out.

## Great Britain

Reports from London indicate that the last few weeks of the year 1912 were characterized by the busiest lumber trade that has been experienced at that season in many years. As a rule the very opposite is the case. Agents and brokers have been working late in their efforts to satisfy anxious buyers, and in some cases, stock lists have been completely sold out. The question of prices does not seem to have had much to do with the progress of business. After the New Year, trade slackened off somewhat. Deliveries at London docks for the week ending Dec. 14th, amounted to 5250 standards as compared with 4640 standards during the corresponding week of 1911.

At Liverpool the business towards the end of the year was limited on account of the holiday season. Apart from this the season for importation from the important centres had come to an end. The spruce deal market was reported strong at the close of the year. A very large steamer cargo of spruce deals mostly from West Bay and partly from St. John, N. B., was sold to the Liverpool district at the highest price obtained the past season. Reports indicate that those who hold stocks of spruce deals, of any specification at all, will be in a fortunate position early in the year. The c. i. f. market remains steady with prices very firm. There are no immediate indications of change. Operations are confined to parcels of varying sizes by liners, and shippers are obtaining full prices for these as they are quickly bought by importers. The spot market at Liverpool continues firm with indications of an advance in price early in the year. Stocks were greatly reduced during the month of December.

The Timber Trades Journal referring to the situation says "stocks have become very materially reduced this month; when it is realized that the bulk of this month's consumption has been supplied from yarded stocks the true position will make itself apparent. The present rate of consumption cannot be gauged by the actual demand shown by the consumers at the moment, because they have mostly covered their immediate requirements, and will not make fresh purchases before the turn of the year, as at that time stock taking is the more important factor. Consequently sales are confined to small quantities, but are inclined to anticipate a good demand in January, when the stocktakings have disclosed the shortages of consumer's holdings.

The last arrivals of pine goods from Canada have now been stored by importers, and all transactions until the opening of next season will be of the usual retail character.

## United States

The first week or two in January is, as a rule, a dull period for the lumber trade in any country. During the past fortnight, however, business in the United States has been fairly extensive and satisfactory. A great deal of building is still in progress and the mild weather has been an important factor in the continuance of the good lumber business. Receipts of lumber at Chicago for the year 1912 amounted to 2,670,696,000 ft. which is an increase of 536,129,000 ft. as compared with the year 1912.

Chicago—The holiday season affected trade conditions in northern pine and the volume of orders fell off. The prospects for good trade in the early spring are bright. Prices for all grades are firm. The hardwood trade was also rather quiet during the Christmas season but wholesalers and retailers expect renewed activity as soon as the inventory season is over. There is a satisfactory demand for plain red oak and white oak and a steady improvement is reported in quartered white oak. Birch and maple are moving fairly well. The activity in the building trade continues to furnish a strong demand for hemlock. Retailers are placing orders for early delivery. Prices are quite firm. A fair demand continues for southern pine factory and yard stock. Stocks at the mills are still reported in bad shape. The outlook for 1913 is said to be excellent. Only a small demand has been reported for cedar shingles. Prices remain unchanged. White cedars are moving fairly well and prices are firm. Lath are strong.

Buffalo—Unusual activity is reported in the market for northern pine. The lower grades are most in demand and quotations are at exceptionally high figures. Trade in eastern spruce is fairly active and stocks are hard to secure.

A Winter Scene at our Mills in Sarnia.

# We Saw all Winter

¶ You can always be sure of getting what you want from us because we saw all Winter and all stocks are always "piled high."

¶ Norway and White Pine a specialty. We are able to make large or small shipments on very short notice.

¶ Are you in the market for heavy timbers? We cut them any length required up to 60 feet from Pine and B. C. Fir.

# Machinery and Equipment

What Manufacturers of Logging, Sawmill and Woodworking Appliances are Doing

## New Machine for Cutting Off and Pointing Dowels

The machine illustrated herewith is the latest product of the Dauber-Bell Machine Company, of Oshkosh, Wis., manufacturers of dowel door and chair machinery. It is designed for cutting off and pointing dowels of all sizes. In the machine, use is made of entirely new principles and it is claimed by the manufacturers to be by far the fastest, simplest and most satisfactory machine ever produced for this work. It is adjustable to cut dowels of any length from 1¼-in. up. The cutting off and pointing is all done by three saws mounted on one arbor. This arbor and the shaft which drives it are geared together with bevel gear and rawhide pinion and are the only two fast running parts on the machine.

In this machine, the rods, as they pass the saws are revolved and are also caused to follow the line of the circumference of the saws while revolving. This insures an even bevel all round the pin. The finished pins are delivered from the machine into a basket or other receptacle, while the remnants of rods too short to make another dowel are delivered at another point.

The machine handles rods up to sixteen feet in length and handles smooth, grooved or spiral rods equally well. It will handle any sized pins from the smallest furniture pins up to those six inches long and three-quarters of an inch in diameter. The saws are ad-

New Dauber-Bell Dowel Cutting and Pointing Machine

justable in and out for more or less bevel on the pins or to take up wear on the saws. This machine is exceedingly easy to operate, the operator sitting down to his work. As there is no limit to the number of pins per minute that the saws will handle, the capacity of the machine is simply limited by the ability of the operator to keep the turret full of rods. This machine is already in use in some of the largest sash and door and chair factories in the United States. The great features of the machine are, the extreme rapidity with which the work is done, high quality of work turned out, simplicity of design and operation, economy of up-keep and the fact that it is an absolutely safe machine for the operator.

Full particulars and names of users will be gladly furnished on application to the makers.

## Simonds Manufacturing Company Introduce Pension Plan

The Simonds Manufacturing Company, Fitchburg, Mass., advise us that the employees of their company have been given a Christmas present of a unique and valuable nature, in addition to the annual gift which the company gives for Christmas. In sending around their customary Christmas gift the company informed their employees that they had adopted a pension system which would be applied to all employees in the company's shops and offices. Roughly speaking, the system is one which provides that after a period of employment covering more than 20 years, a employee who has reached a minimum age limit is provided for in a liberal manner upon his retirement. The system had already been tried out in a quiet way by the company and had proved extremely satisfactory. This pension plan will now be applied to all the company's employees in the U. S. and to the employees of the Simonds Canada Saw Company, Limited.

## B. G. Luther Company's Box Machines

The machines made by the B. G. Luther Company, Limited, manufacturers of patent box machinery, 91 Foster street, Worcester, Mass., are very well known to box manufacturers in all parts of the country. Improvements, however, are so frequently being made to machines of this type and the importance of having the best class of machinery in a plant is so great that we take pleasure in calling attention to some of the machines turned out by this enterprising company. The patent double mitre machine shown in one of our illustrations, is a machine which has long been required in the manufacture of boxes and also for mitreing door jams and various other fittings for buildings. The machine is constructed entirely of iron and steel and is built in the most thorough manner. Its capacity is as follows:—Saws can be changed to mitre from 12 inches (long corner) to 60 inches long, without stopping the arbors. They can be set on any angle from 90 degrees to 45 degrees and will cut exact duplicates as to length until changed. All the arbors and shafts have self-oiling boxes. The machine is furnished complete with two 12-inch cut-off saws and belts to run the arbors. The weight of the machine is 1,150 pounds, and it occupies 2 ft. 6 in. x 6 ft. of floor space.

Another of our illustrations shows the B. G. Luther Company's patent double cabinet saw. This machine is of entirely new design, and, as will be realized from the illustration, the variety of work that can be done upon it is exceptionally wide. The machine is constructed of iron and is sufficiently heavy to absorb the vibration of the arbors and counter shaft. The tables will tilt from horizontal to an

Patent Kindling Cutter

Patent Double Mitre Machine

Patent Double Cabinet Saw

angle of 45 deg. and can be held firmly at any point between the two extremes. The arbors are of cast steel and run in the best genuine babbit boxes. The arbor pulleys are between the bearings, thus giving equal strain to both ends of the arbor. For resawing a deep gauge can be readily attached to the low end and held in place by a set screw. The endless 4½-in. belts are used for driving the arbors. One 14-in. rip saw and one 14-in. crosscut saw are furnished with the machine. The counter shaft is furnished with tight and patent self-oiling loose pulley, 10-in. x 4½-in., and two drive pulleys, 20-in. x 4½-in. It is designed to make 450 turns per minute. The weight of the machine is 1,250 pounds.

Another of our illustrations shows the patent kindling cutter manufactured by this company. This machine is adapted to the cutting of the edgings made in box-making. It is automatic self-feeding. The machine is arranged with a heavy steel arbor and 8-in. diameter by 6-in. face arbor pulley, supported in three self-oiling boxes, connected to a very heavy frame work. It carries six saws, and is set to cut 8 in. or 10 in. long, as the purchaser desires. The edgings are fed to the saws by endless sprocket chains, the shaft of which is connected directly with the arbor. The counter shaft is provided with swivel open, self-oiling box hangers and 10 in. x 6 in. fast and patent self-oiling loose pulley, and 20 in. x 5 in. driving pulley, and should make 650 revolutions per minute. The machine weighs 1,400 pounds.

F. Reddaway & Company, manufacturers of the well-known "Camel" and "Camel Hair" brands of belting and linen fire hose, stitched cotton belting, etc., 595 St. Paul street, Montreal, Que., have sent out their friends a useful little pocket diary neatly bound in red leather. The diary contains pages for memoranda of various kinds as well as a useful assortment of general information upon subjects which everyone wishes to have at his finger ends. The company advise us that although the supply is limited they will reserve a few copies of this useful little pocket book for readers of the Canada Lumberman who may inquire for it.

## The Truck That Saves It's Cost Several Times Over in The Year

This truck is designed for lumber yards and planing mills and will be found invaluable for loading and unloading cars.

The front gearing is detachable and may be used with eight or twelve hind gearings. It is a double-header, nuts on axles being kept tight with Steel Cotter Keys.

Oil cups on the wheels and the fact that there is no resetting of tires saves any amount of trouble.

The old wooden-wheeled truck is a back number in comparison with this. It will pay you to write for our general catalogue which describes these trucks in detail, and pick out the style you want now.

## EDGINGS

### Ontario

F. J. Gadke, Lakelet, Ont., has sold out his saw mill to Wm. Gadke.

Rudolph & Son, Elmwood, Ont., are advertising their hardware and lumber business for sale.

S. Jarvis, lumber dealer, Maple, Ont., suffered loss by fire recently. The loss was partly covered by insurance.

The Lake Superior Paper Company have started their fourth mill, which will make the total capacity of the mills 60,000 tons per annum. The whole of the present year's output has been sold.

John Forristal, manager of the London and Petrolia Barrel Company, Simcoe street, London, Ont., will shortly have plans prepared for the erection of a fibre box factory. He will then be in the market for machinery.

Reports from Sault Ste. Marie, Ont., state that the second two machines are now being installed by the Lake Superior Paper Company, Limited, and that the mill will have a capacity of 200 tons a day when they are in operation.

Alphonse Tessier, Chatham street, Penetanguishene, Ont., will build a planing mill and sash and door factory. The building will be of cement foundation and brick construction. Mr. Tessier will be in the market for machinery.

Oscar C. Teal, Dufferin street, Bridgeburg, Ont., has commenced the erection of a planing mill on Erie street. The plant will be one storey high, of cement foundation and concrete block construction. Mr. Teal will require equipment for the plant.

Preparations are being made to clear the right of way for the branch line of the Abitibi Pulp and Paper Company, which will connect their proposed plant at Iroquois Falls with Iroquois Junction. The company's factories will be supplied with motive power from the Falls. The company will have a colonization scheme which will help many settlers to secure ready-made farms.

The Elmira Furniture Company, Union street, Elmira, Ont., will build an addition to their furniture factory. It will be three storeys, 100 ft. x 50 ft. The ratepayers of Elmira recently passed a by-law for a loan of \$10,000 to the company. The president of the company is Mr. Thos. Dillon, and the manager is Mr. A. Steinke.

The Harriston Furniture Company, Webb street, Harriston, Ont., are considering plans for extending their furniture factory. The proposed addition will be two storeys, 60 ft. x 80 ft., cement, brick and stone, fireproof construction. The company will need new machinery and freight elevators. The manager is H. Leighton, John street, Harriston, Ont.

The Dryden Timber and Power Company, of Dryden, Ont., expects that its new paper and sulphate mills will begin operations on February 1. The company has been delayed owing to the fact that its electric alternators have not yet arrived. The fire which visited the power plant last month was confined altogether to some wooden forms which were to be used for the concrete work of a part of the construction of the power house. The damage was small.

Haileybury, Ontario, will shortly have its first large industry. It will be a plant for the manufacture of ground wood pulp, paper and numerous by-products. About 750 hands will be employed in the works when completed. M. J. O'Brien, the well-known lumberman, mine operator and contractor, of Renfrew, Ontario, is one of the leading members of the company, and arrangements for starting construction have been under way for some time, but have been delayed until the present owing to power privileges, freight rates and other details.

The Canadian Barker Company, Limited, with capital of \$40,000, has been incorporated with head offices in Sault Ste. Marie, Ontario. The company is empowered to manufacture and sell pulp wood barkers and more especially those manufactured according to the several inventions of Alexander Roberts, Arthur Libert and Fred Libert. The new organization can also engage in the manufacture and sale of paper making, wood working and other machinery. The incorporators are: Samuel H. Cady, Alexander Roberts, William Cleere-man, Edmund H. Manger, Phillip A. Haegers and Charles W. Schroeder, all of Green Bay, Wis.

Mr. Robert Bruce, of Alex. Bruce & Company, Fort Frances, Ont., with head office at Glasgow, Scotland, left for Scotland on January 4th. In an interview with a representative of the Canada Lumberman, Mr. Bruce stated that his company were at present turning out about 3,500 preserved railway ties a day at Fort Frances and that this amount would be increased to 8,000 by next spring. The process of preserving which Messrs. Bruce & Company are using is the B/M system, which is a German process, and they own the sole rights for it in Canada. The mixture used is zinc chloride and sulphate of alumina. By this system the ties are not only preserved but are also made fireproof and odorless. At present Messrs. Bruce & Company have sufficient order on hand for railway ties to keep their Fort Frances plant busy for some time to come, but they will shortly erect plants at Edmonton and Vancouver and will then be ready to preserve lumber for many other purposes.

### Eastern Canada

Deshaies & Dupont, lumber dealers, St. Flore, Que., have dissolved.

The Canada Lumber Sales Company, Limited, Montreal, has been incorporated with a capital of \$60,000.

The Chadsey Lumber Company, Danville, Que., has dissolved, F. B. Chadsey is continuing under the same style.

Messrs. Andrews Bros. & Robb, Townshend street, Sydney, N.S., are contemplating the purchase of woodworking machinery.

Chappell Bros. and Company, Limited, Brookland street, Sydney, N.S.,

are contemplating the erection of a warehouse and offices to be three storeys high, 45 ft. x 40 ft.

The Partington Pulp & Paper Company, St. John, N.B., will enlarge the capacity of their plant fifty per cent. this year. They have had a very successful year's business.

A report from Fredericton, N.B., states that a large new mill will be erected this spring at the mouth of the Taxis River. The names of the promoters have not yet been made public.

The Jas. McLaren Company, Limited, Buckingham, Que., are building extensions to their pulp mill, which will be one storey high, 180 x 80 ft., with concrete walls and floor. The company will require machinery. The new plant will use 5,000 cords of spruce per year.

Plans have been completed for the power development at Grand Falls, N.B., and also for the construction of a pulp and paper mill. The work will commence early in the spring. Sir Wm. VanHorne is president of the company. The power development is estimated to cost \$8,000,000.

An important lumber transaction was recently completed by which the Brompton Pulp and Paper Company purchased the entire holdings of Mr. J. E. Roberge, in vicinity of Lambton, P.Q., on the Q. C. R. branch, Tring Junction to Megantic. The property consists of five thousand acres and the price paid was \$35,000.

N. N. Walley, Lansdowne street, Sherbrooke, Que., is in the market for 100,000 feet of dimension timber for trestle work at Ascot, Que. The longest pieces are to be 35 ft., 75 per cent. of the timber is to be 6-in. x 6-in. and it is to be delivered f.o.b. cars, Ascot, not later than June 16th, 1913. Specifications may be seen at the office of Mr. Walley.

Mr. Charles E. Lockhart, who conducts a lumber mill and general store at Notre Dame, Kent County, N.B., has sold his mill and timber limits to Mr. John H. Crandall, of Moncton. It is understood that others are associated with Mr. Crandall in the purchase. Mr. Lockhart retains his store. The mill and timber lands are situated at Notre Dame. Mr. Lockhart has been in the timber business at Notre Dame for some years and is well known.

Negotiations between the Government of New Brunswick and the Grand Falls Company, Limited, have been practically completed, and the company have deposited \$50,000 with the government to take the place of a deposit of a similar amount made by the old company. The company's plans call for the construction of a pulp and paper plant in two units, which, when completed and in operation, will employ upwards of 2,500 people. The estimated expenditure in the development scheme is said to be at least \$8,000,000, and work will be commenced in the early spring.

A report from Fredericton, N.B., tells of the destruction of Aiken Brothers' lumber camp on the Keswick. The loss amounted to about \$1,000. About thirty men had been living at the camp and the Messrs. Aiken lost all their supplies for the camp, while the men lost their personal effects. It will take some time to build another camp, and in the meantime the operations have had to be suspended at a period when conditions are more favorable than at any time this season. Mr. William Aiken was a heavy loser personally by the fire. He lost wearing apparel to the value of about \$100 and \$75 in bills was also burned with his effects.

Lumber interests in VanBuren and North Aroostook County, in the State of Maine, are behind a bill which is to be presented to the Maine legislature this winter, authorizing the building of a railroad bridge between VanBuren (Me.) and Saint Leonard's (N.B.), connecting the Bangor & Aroostook railroad system in Maine with the Canadian Pacific, the Grand Trunk and the Intercolonial railroads. The VanBuren Lumber Company is using Canadian logs cut on the line of the Canadian railroad which are hauled across the international bridge at VanBuren. In order to make the Canadian supply more available, and to keep the mills running almost the year round, the mill owners are using every effort to bring about the connection by rail.

Work is being rushed upon the construction of the plant of the Donnacona Paper Company, about thirty miles from Quebec at Capeau Sante, near the junction of the St. Lawrence and Jacques Cartier Rivers. The foundation has already been completed and the walls are partly up. The building is to be of brick and concrete, 550 feet by 125 feet, and most of it will be two storeys in height. The equipment will be about seventy tons of paper per day. The dam will be about 1150 feet in length. It is expected that the mill will be ready some time next fall. The contract for the dam has been awarded to the Ambursen Hydraulic Construction Company, Limited. Contracts for paper machines, boilers, electrical equipment, grinders, etc., will be awarded shortly.

#### Western Canada-

The Columbia River Saw Mill Company, Kault, B.C., will erect a large modern saw mill at Sicamous next spring.

The Adams River Lumber Company, whose sawmill at Chase, B.C., has shut down for the winter after cutting 30,000,000 feet of fir, cedar, spruce and white pine, will build the longest log flume in the world. The work will be started at once.

A match factory has been opened at Neepawa, Man., which is financed by a number of leading citizens. About fifteen hands are employed and everything used in the manufacture of the commodity is obtained from the immediate district save the sulphur.

A. E. Watts, of Wattsburg, B.C., is completing a mill on the Canadian side of the International boundary, a short distance north of Porthill, Idaho, with the object of cutting timber from limits in that neighborhood. This will be the third mill under the operation of the Wattsburg Lumber Co.

Application has been made, through Mr. A. Reid, of Enderby, B.C., by Mr. J. J. Steele, of Vancouver, for the right to take and use 500 inches of water from the Spallumcheen River at a point near King Fisher Creek, Enderby, for industrial purposes. It is understood Mr. Steele represents a strong financial syndicate of Eastern Canadians, and that the industrial purposes to which this water is to be applied will be in the manufacture of paper and pulp. There is an unlimited supply of timber in the vicinity of the site selected that could be utilized in the manufacture of paper pulp, and the manufacture of this material into pulp will afford employment to a large number of men, and at the same time aid in clearing a vast acreage of valuable agricultural land.

### Increasing Use of Substitutes For Wood

Dealing with the production of lumber and the market for it, over a period of years the United Forest Service, in a recent bulletin, discusses the natural substitution of other building materials for wood and the consequent lessening in the demand for lumber for building purposes. "The situation which confronts the wood-using industries," says the bulletin, "embraces conditions which are certain to work against the continuation of the present methods of production and organization. The influence of some of these is already felt to a degree that makes continued profits along present lines extremely uncertain." The document deals with tendencies of forest utilization. Continuing, the bulletin says: "Production has outrun consumption until a condition of over-supply has been reached. This has prevailed without much change for four years.

"Side by side with the present over-cutting exists an excess capacity of production, amounting in some of the principal timber states to from 50 to 100 per cent. This excess of capacity facilitates over-production whenever conditions become in any way favorable.

"Efforts to safeguard the timber supply against the ill effects of fire, windfall, insects and wasteful lumbering have been successful to a degree which insures a supply for many years to come.

"The increased use of substitutes for wood has brought the demand for lumber almost, if not quite, to a standstill and promises still further to decrease the demand in the future.

"Prices for medium and low grades of lumber have remained practically at a standstill since 1907 and cannot advance to any extent without opening the door still wider to substitutes.

"It is obvious that future profits must come from increased utilization—from the manufacture of products which will absorb the material now wasted or utilized without profit—rather than from increased prices. Mere adjustment of total supply to demand will scarcely meet the situation. A method must be found to limit for each grade the quantity produced to that actually needed for consumption. With higher grades this will not be difficult; there exists no oversupply in these. Year by year the quantity required is about the same as that produced.

"It is with medium and low grades that the difficulty will come. It is in their case that over-supply prevails and competition rules. To reduce the quantity of low grades it will be necessary to find other avenues of use for the material which now goes into them. Obviously, the problem calls for the most thorough study. Possible starting points, however, are not lacking. One such point is found in the fact that the minor woodworking industries are going into the forest for their raw material, when in many cases inferior materials from the sawmills would fully meet their needs. Approximately 75 per cent. of the 140,000,000 railroad ties used each year are hewed. These could as well be sawed. By making the ties at the sawmill a considerable part of the timber now going into inferior lumber could be turned to that use."

### Pulp and Paper Magazine Growing With The Trade

The New Year number of the Pulp and Paper Magazine of Canada, published by the Industrial and Educational Press, Limited, Toronto, has just come off the press in its enlarged size, and will hereafter appear twice a month, instead of monthly, as formerly. This is the first number from the pen of the new editor, A. G. McIntyre, formerly Chemical Engineer for Price Bros. & Company, Limited. Mr. McIntyre is a graduate of Acadia University in Arts and Science, and McGill University in Chemical Engineering, and joins this magazine after a wide engineering and paper mill experience. The year's progress and development are fully reviewed in this number, and many valuable articles are contributed. Mr. H. S. Ross, K.C., of Montreal, writes an able and exhaustive resume of the Workmen's Compensation Act of Quebec, with references to those of other countries. John Norris, of the American Newspaper Association, has a timely write-up on the matters of interest in the newsprint world. The new mills of Price Bros. & Company, Limited, are fully described in an illustrated article by the editor. The new development of utilization of wood waste for gas producers is discussed by E. B. Archibald, B.Sc., of Montreal.

Mr. R. H. Campbell, director of the Forestry Branch of the Department of the Interior, outlines the Dominion Forestry policy. The Canadian water powers, timber regulations, pulp and paper tariffs, exports and imports, and the entire condition of the trade and its many ramifications are dealt with. All this, with numerous special technical articles, make the magazine an excellent publication for the pulp and paper industries and trade.

The building contracts awarded in New England since the first of this year have amounted to \$103,066,000, as compared with \$166,906,000 for the corresponding period last year, and \$153,282,000 for the corresponding period of 1910.

## Cross - Cuts for Good Hard Work

The "SAW KING" Cross-Cut Saws have won exceptional favor throughout the trade by the good work they do, the hard wear they stand and their general reliability. These saws have stood the test of Camp and Mill and have proved their worth—their high quality steel and perfect tempering and grinding sets them far above the average and places them in a class by themselves.

### THE "SAW KING" CROSS-CUT

The "Saw King" Cross-Cut Saws have merits possessed by no other saws. By looking at the above cut you will see that the chip spaces are wider and deeper in the centre than they are in any other part of the saw, thereby giving a capacity for the accommodation of the largest accumulation of sawdust, which is always in the centre of the saw. The chip spaces decrease in size from this point of the saw, as also does the quantity of sawdust. All users of saws know that the teeth at the centre wear much faster than they do at the ends, as the teeth are longest at the centre, it gives greater wearing capacity to the saw, and as the teeth are smaller at the ends of the saw and leaves the saw blades wider between the teeth and at the back. Where the blade is narrowest, it gives more strength and stiffness at the point where it is most required. The saws are tempered by our new improved process, giving them a keener cutting edge than any other Cross-Cut Saw made. They are thoroughly warranted. Any defective saws will be replaced by the seller.

Prompt Delivery a Specialty.

☛ To insure Satisfaction—State where belt is to run ☛

# Good Belting is Essential To Plant Efficiency

It is impossible to retain the maximum efficiency in your plant by use of cheap belting. Sooner or later, that belting will stretch—then it will slip—then you will be losing power with every revolution of the pulley—it pays in the end to avoid this loss by installing at the outset

## BEARDMORE BELTING

For the past sixty years we have made belts which at every period in our history have proved vastly superior to any others on the market. This is the record to which we owe our present commercial supremacy—the record at the back of every belt we sell.

Catalogue containing full belting information will be forwarded on request.

# SELECTION OF LOCOMOTIVES

WHAT SHOULD BE KNOWN BEFORE YOU PURCHASE LOCOMOTIVES:—

Nature of the service.

Capacity of the cars and weight of train.

Character of track—is it new or old.

Length of haul.

Is time an important factor.

Do you want a quick locomotive or a big puller.

Distance from base of supplies and quarters for the men.

Water and coal carrying capacity.

All these items and more should be considered.

A careful study of conditions may mean larger profits.

Our experience may be valuable in considering them.

A dollar saved is more than a dollar earned.

Write or wire us, or better still, come to see us.

Dominion Express Building, MONTREAL, CANADA

# Why Users of Berlin Matchers Never Have Bearing Troubles

Bearing troubles on Berlin Matchers ended when Berlin Engineers brought out the automatic take-up box. The cap of this perfected box adjusts automatically, with wear. It cannot get too tight, nor too loose. Consequently it won't heat, nor pound. Berlin High-Efficiency Matchers are equipped with Automatic take-up boxes for cutter head journals and side head spindles.

## Compare the disadvantages and the advantages of two types of boxes for the above named parts

### Screw Take-up Box

1. It is practically impossible to get both ends of the cap on a screw take-up box adjusted the same.
2. One end of the cap screwed down too tight causes heating—heating causes wear—wear not taken up immediately causes pounding of journals.
3. Stock of uneven thickness is manufactured when liners are uneven, caps screwed down too tight on one end, or when operators are careless with adjustments.
4. The operator may forget to put oil in the reservoirs during a heavy run. Journals become dry and soon heat.

An illustrated circular of the several models of this machine sent upon request

### Berlin Automatic Take-up Box

1. Berlin Automatic Take-up Boxes adjust with wear without any attention whatever from the operator, except oiling.
2. There is no heating or pounding because caps are held in place by springs that keep journals rigid but never tight enough to cause heating.
3. Pressure being equal all along the cap, wear will be parallel with the cutting edge of knives, consequently stock is planed to an even thickness.
4. Whenever possible sight feed oilers are used. The operator can tell at a glance whether journals are getting the proper amount of oil.

### A Good Investment

Mills in every woodworking section find Berlin Matchers a good investment. They save grades and cut producing costs at every installation.

Automatic Take-up Boxes on Berlin Matchers run for months and years without any adjustment whatever.

Write to-day for further data on our new series of Matchers.

## Belt Drives in Damp Places

If the belts are to run in moisture laden atmosphere, or in water, we recommend Scandinavia, provided the conditions do not continually alternate between wet and dry. That is, Scandinavia is a good belt to use either in a wet place or a dry one.

If the conditions of wet or dryness are continually changing, we recommend Lanco Genuine Balata Belting.

Write for our pamphlets on these belts.

# When You Overhaul Your Saw Mill or Pulp Mill

**T**HERE are wet places in every saw and pulp mill where nothing but the highest class belting can "make good" It is for these wet places that recommend what most mill-men swear by—our

## "ACME WATERPROOF" BELT

This belt is especially made for a rough and trying service. It has less stretch than any other belt by 15 to 25 per cent.

When you are overhauling try a Goodhue "Acme Waterproof" belt. Other Goodhue belts are "Extra" and "Standard."

*Prices and Particulars on Request.*

# Testifying to the Great Growth of a Business

THESE two volumes tell a graphic story of the enduring merit of DISSTON BRAND goods. They illustrate how, in each succeeding year, the books which hold our records have grown and grown until we see here the strange contrast

presented by this little book, weighing 5 pounds, containing the earliest entries of the DISSTON business for several months and one of the big books, weighing 38 pounds, required to-day to register a **single** month's sales.

But yet more wonderful is the fact that many of the firm names appearing in the first book are still to be found in the present one. Year after year these names have reappeared upon each new set of books.

We can name a long list of hardware jobbers and sawmill supply houses that have been continuously buying from us for more than fifty years. For a lesser number of years they are recorded in ever-increasing numbers, as new firms appear, or others at length stock DISSTON Saws, Tools and Files in response to the demands of their customers.

When we say that the leading concerns in the hardware jobbing trade and mill supply business have been repeating their orders for DISSTON BRAND goods year in and year out for nearly three-quarters of a century, we believe it is the strongest testimonial any firm could have on behalf of its products.

"There must be more than ordinary merit in that brand of goods which creates and satisfies an ever-increasing demand over a long period of time."

## Lumbermen's Supplies

We are more than ever prepared to cater to the Lumber Trade this Season with a full line of Lumbermen's Supplies. When you buy from us goods backed by our guarantee, you buy from a firm with over fifteen years experience which has placed us in the front rank of the supply trade

### Tents

We carry a full line of all kinds of Tents suited to the lumbering trade. Tobin's tents need no recommendation—they are known from coast to coast.

### Blankets—Horse & Shanty

We have stocked a full line of all kinds of blankets from the lower grades to the best wool Shanty blanket. Our horse blankets are of special quality and make. We carry also all kinds of waterproof coverings, tarpaulins, etc.

### Oilclothing

No better value in this line can be found than in our stock. A special line of goods, glossy finish, is a particularly good seller among lumbermen. Send us your inquiries. We can ship from stock on short notice.

**Tobin Limited, Ottawa**

## Potato Scale Boiler Cleanser

**"A Deadly Enemy of Scale"**

We absolutely guarantee this Boiler Cleanser to remove all old scale, and if a small quantity is used continually, it will prevent any new scale from forming.

The composition of this Cleanser is of such ingredients that it is harmless to metal.

Send us a gallon of feed water and we will mix a quantity for **free trial** to suit your water conditions.

The Shimer "Limited" Cutter Heads, Figures 627 and 628 with Expansion

## Why You Should Use The Shimer Cutter Heads

For Flooring, Ceiling, Siding, Ship Lap, Jointing, Double Ceiling  
Doors, Sash, Blinds, etc.

Made of Steel Forgings, they represent the greatest possible strength in compact and workmanlike manner, embodying the vital principles of clearance to all leading Bit Points. the alternate and shearing effect of the cut reduces to a minimum the tearing-out tendency of cross-grained lumber. Cutters have exact shape in their exterior circles, and uniform product is maintained indefinitely without extra trouble or expense.

J. A. Fay & Egan Co.,  
Cincinnati, Ohio.

Gentlemen: RE:- "THREE-DOUBLE-THREE" MATCHER

This machine is giving us entire satisfaction and we believe the Fay-Egan "333" to be the best Planer and Matcher on the market today.

You are at liberty to refer any prospective customer to us. We can give the machine a good recommendation.

Very truly yours,

*E. E. Wollett*

We have made some strong claims for this Matcher, that it would cut planing costs 40 to 50% and raise the grade of lumber put through it to bring from 10 to 30% higher prices — and the 333 has made good in every instance — letters like this one from Mr. Wollett and from highly satisfied users everywhere, which we have been publishing, prove that these claims are well founded.

In most cases a 333 equipment will take the place of a whole mill full of old machines — a plain Matcher will do as much as two or three old ones — with our Automatic feeder as much as three or four old ones — with Profilers, as shown above, you can do away with your inside moulder, running formed stock on the Matcher — with

a Resawing Attachment you can cut costs still further by matching double thick and resawing in one operation.

Stop and consider this proposition for a moment — it means actual dollars and cents for you — without obligation, write us for further information.

## Dolphin Waterproof Belting

is the answer for  
belting troubles  
in wet places.

Leather belting is acknowledged to be better and cheaper than any other kind of belting for wet places, providing it is waterproof and that the laps will not come apart.

Dolphin Waterproof Belting is guaranteed to meet all these requirements.

## TIMBER TALKS

Thirty-two years have wrought wonderful changes in values, sources of supply and national regard for timber.

Thirty-two years ago we advised our clients to buy timber; twenty-two years ago the same advice was given; twelve years ago it was reiterated; two years ago we restated our belief in the continued increase in the price of timber and to-day we reaffirm it.

Acting upon the POINTERS we gave, at the time they were given, hundreds of investors have reaped rich profits.

Knowing timber to be a safe investment and believing our organization to be of value to those contemplating the purchase of timber, we have issued

### A BOOK OF POINTERS

in which we have endeavored to crystallize the observations of thirty-two years' timber research.

It was worth our while to formulate "pointers," it should be worth your while to assimilate them.

## Makes It's Mark Vivid and Lasting

Marks that remain vivid and wear like iron are a real satisfaction to the man who handles lumber. The metallic pigments, like graphite, of DIXON'S LUMBER CRAYONS offer marvelous resistance to all kinds of weather conditions. Their marks are often visible after six months of severe exposure to sun and storms.

## DIXON'S LUMBER CRAYONS

have always remained the recognized standard because of their one, uniform and dependable quality; their convenient and uniform shape and size and because of the careful selection of materials used in their manufacture. DIXON'S LUMBER CRAYONS are made in nineteen grades and colors, including black (six grades), red (two grades), blue (two grades), green, white, yellow, brown, terra cotta, violet, pink and orange. Some are made to fill particular needs—let us tell you more about them. Get acquainted.

Write for lithographed booklet No. 239, illustrated in colors.

## The Proof of the Wheel is in the Trial

If you are not using Aloxite Wheels in your mill just let us send you a wheel for trial.

Give it a good fair chance to prove its worth—let your filer learn for himself that the Aloxite Wheel will cut fast and clean, without burning or case hardening the saw—let him test the wheel for durability and for its ability to hold its shape.

These are just the qualities that have recommended Aloxite Wheels to hundreds of filers—the qualities that will prove to **your** filers that Aloxite Wheels will give better gummed saws in less time—at less wheel cost.

May we have your Trial Order?

Our No. 105 Matcher is not our heavy duty fast feed machine but is a high grade medium weight matcher. It is a general purpose machine and for work up to 100 feet per minute ; is without an equal.

It is supplied with five rates of feed from 45 to 100 feet per minute.

Bulletin No. 105 fully describes this machine and will be gladly sent on request.

Have you our complete catalogue? If not let us send you one.

**We Make the Most Complete Line of  
Woodworking Machinery in Canada .**

**Canada Machinery Corporation Limited**  
**GALT, ONTARIO**

**Look at the Picture!**

**Look at the Names!**

The picture is of our stile gluer.

The names are of some of its users. Some of them have sent in duplicate and triplicate orders unsolicited. Are they the kind that would do that if the machine was not a money saver?

**It Glues the Whole Stile in a Second.**

## WICKES GANGS

"As Staple in a Saw Mill as Sugar in a Grocery."

**FLAT GANGS** Unexcelled in the manufacture of

Flooring Strips  
Silo Stock

Cedar Siding  
Door Stock  
Boards

Shiplap  
Box Lumber

from cants and hitches, from either hard or soft woods.

### ROUND LOG GANGS

JUST WHAT THE NAME IMPLIES —taking all your small logs just as they come from the pond and cutting them up into boards or dimensions, getting every board there is in the log, never over-slabbings (wish we could say this of all head sawyers.) Built to handle either one or two logs at once, up to 14 in. diameter.

KEEP THE SMALL LOGS AWAY FROM THE HEAD SAW and CARRIAGE entirely, raise your cutting capacity, and install economy by the same stroke.

Not an EXPERIMENT, but an ECONOMIC NECESSITY.

Think it Over Carefully, then Write us for Details.

**"The Gang cannot  
Overslab."**

## Wickes Brothers

# The Popular Jumbo Edger

The Jumbo combined gang and Edger is one of the most popular pieces of saw mill machinery that we manufacture, and we have some very flattering recommends for it.

12 saws are used on the machine, 8 on the gang side and four on the edger part. "Jumbo" will rip up cants to 8 inches thick and it is impossible for a cant to fly back. Reverse friction is supplied in case cant binds and this prevents saw from being burned.

Let us quote you on saw mill equipment and repairs.

# Waterous Steel Carriages

---

---

For Fast Cutting "Up-to-date" Saw Milling

These Carriages have built into them every improvement that the increase of cutting speed and the demand for better, finer and more accurately cut lumber have suggested. A Waterous 1913 Carriage IS a 1913 Carriage.

Waterous Steel Carriages combine fast cutting features with improvements in design that make perfect and permanent alignment an absolute certainty. They are turned out with a "built-rightness" and strength in essential parts that spell real value from the standpoint of service.

Built with knee openings 36", 42", 50", 60" and 72", and with any number of head blocks. They are adaptable for rope or steam feed.

---

*We stand behind every Carriage we turn out.*

## STRONG GRIPPING POWER

One of the characteristic features of Dick's Belting is the strong gripping power, which ensures the transmission, positively without loss, of the whole power given off by the engine. The entire absence of stretching or slipping is another important quality Dick's Belts possess. It will pay you to investigate these belts before buying any other make.

# Fully Guaranteed Sawmill Machinery

This is the only kind for you to buy to ensure satisfactory and continuous operation throughout the entire sawing season.

All our sawmill machinery is sold on an absolute guarantee of proper operation and perfect construction.

Naturally, therefore, we buy only the highest grade materials and use only skilled workmen, and everything is built under the most careful supervision.

These things are necessary to produce well built machinery, but they would be useless without proper design—and the “know how” of designing sawmill machinery can only come after long experience.

We have such complete confidence that our machinery is correctly designed that our guarantee is:

**“These machines are guaranteed against defective materials and workmanship for the period of one year, and their proper and successful operation is also absolutely guaranteed. Should any parts fail through defects, we will replace them free of charge, or should any machine not work properly, we will remove it at our expense and refund any part of the purchase money which may have been paid to us.”**

This guarantee goes with all our machines and we have never had to take back a standard machine yet.

And back of this guarantee is our fifty years' experience building sawmill machinery for stationary mills only.

It will pay you to buy your machinery from us this winter.

# Timber Limits for Sale on Georgian Bay

The undersigned offer for sale in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; Tug Scow and other Lumber Equipment, including boom chains, plows, sleighs, etc.

The Limits, part of which have recently been sold, include : 440 square miles of licensed and deeded Pine, Hemlock, Spruce, Birch and other timber. The licenses from the Ontario Government include all timbers and are not restricted for time. Government dues are as follows : Saw Logs, White Pine, \$1.50 per M. ft., B.M. Saw Logs, Hemlock, Tamarac and other woods 75c. per M. ft. The timber is situated in the Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street. The Canadian Pacific, Canadian Northern and Grand Trunk Railways run through the limits, which makes some of the parcels offered for sale particularly desirable for small mill owners.

A circular giving full information, maps, terms and conditions of sale will be furnished upon application to

# MAPLE LEAF SAWS

The Improved Racer Cross Cut Saw, by Actual Test, is the Fastest and Easiest Cutting Saw Made

The Maple Leaf saw is higher priced than the ordinary saw because it costs more to make it. It is made of the very highest quality of steel and tempered by a secret process which toughens and refines the steel. The Maple Leaf trade mark on the saw means that it is the equal, if not superior to any saw made. It also means that you are privileged to test it against any other make and if not found equal or superior in quality you can return it and have your money refunded.

The ambition of the manufacturers of the Maple Leaf Saws has always been to produce the best tempered saw in the world and they are constantly investigating and experimenting with this end in view. They have recently made some valuable discoveries in evenness of temper. It has always been difficult to get a perfectly even temper on long and thin sheets of steel, such as saws are made of. Our recent discoveries make this an absolute certainty. Every user of saws should bear in mind that the temper of the saw is its most valuable quality. High finish and attractive appearance amount to nothing if the temper is not right.

All Maple Leaf Saws are Guaranteed to be Perfect in Temper

# GARLOCK PACKINGS

## Garlock Regular Rings

For all general purposes outside of high pressure work. This Packing is a special grade thoroughly lubricated with the celebrated "Garlock" compound, and is the perfected result of over thirty years experience in manufacturing fibrous Packings.

## Garlock Square Duck Packing

Made of good quality Cotton Duck and friction for cold water.

## Garlock High Pressure Gaskets

Absolutely heat proof, will not vulcanize or blow out under any steam pressure, being made of long fibre Asbestos Brass Wire Insertion.

## Garlock Red Sheet Packing

Made of high grade Rubber compounded in such a way as to give it great strength and reliability. This Packing has established wide reputation on its own merits.

## Garlock Cloth Insertion Sheet

Used on cold and warm water pipes. Is unexcelled in pliability, smoothness of finish and strength of Cloth Insertion.

## Garlock Rubber Valves

Specially made to meet specific conditions—absolutely unaffected by oils.

Before placing your next order for supplies get our prices on Leather, Rubber and Canvas Belts, Hose, Brass Valves, Babbitt Metals, Saw Blades, Files, Emery Wheels, etc. Write for catalogue.

**A  
Message  
to You**

(Please read)

DOES it mean anything to you to know that **you** can get prompt shipments of the highest quality Lumber and Shingles at the same prices you are paying for inferior service and goods?

IS there anything more unsatisfactory to **you** than being held up by delays in receiving the stock you are in urgent need of—maybe it is only a few pieces of lumber or bundles of shingles out of a car?

HOW do **you** feel when stock for which you have been waiting arrives and is poor quality—unfit for the use you require it?

WHY don't **you** place your orders with a Company who can, in shipping you, obviate the worries and dissatisfaction mentioned above.

**OUR MESSAGE TO YOU — DEAL WITH US.**

**No. 152 Long Leg Seamless Heel,  
Draw String Moccasin**

The latest improvement in Moccasins doing away with all seams at heel. Under the old method the heel would come down and in a short time the wearer would be walking on it, wearing out the stitching, thus causing it to leak and rip. With the new process the heel will not flatten out, will always keep its shape, and there are no seams whatever making a clean smooth Ripless and Water-proof heel. Made only in the highest quality, all heights of leg, with or without soles or heels. Write for Catalogue and Price List.

## Rothfuss-Howard Iron Works

Williamsport, - Pennsylvania

This shows some of the designs made with cutter-heads included in regular equipment. There are more in our big circular. Send for it. Those shown in the round are also made octagon or square.

## We Have Solved the Problem of Balusters In Small Lots Made Profitably by Machinery

The improvements in our No. 92 Turning and Variety Machine, and the complete variety of the cutter heads, which are arranged in sections, makes it easy to match very closely almost any detail design, and to make the change to any pattern, ready for turning.

IN ABOUT 15 MINUTES  
WITHOUT LOOSENING OR ADJUSTING A KNIFE

This is the only practical machine for the economical turning of inside balusters in small lots of different sizes or design, especially those made in two or three lengths for stair work. It is also an excellent Variety Woodworker, which can be kept profitably employed in countless ways when not in use for making turnings.

We shall appreciate your enquiry

# A Belt which Conveys ALL the Power

Practical men know the drainage of power from a slipping belt, *and because they know*, they are buying

## GOOD YEAR RUBBER BELTING

**Which Neither Slips Nor Stretches**

It is built up, layer upon layer, of close-woven, long-fibre, cotton fabric, rubberized and cured under Goodyear processes. And every Goodyear belt has in it the lowest possible minimum of stretch, because the belt is "cured" whilst stretched to the limit of safety in a special machine.

### That is the Goodyear Method of Belt Manufacture

And the result is entirely satisfactory to belt users—a fact to which our enormously increased sales testify. What is the significance of this **CONTINUED SALES INCREASE — 50%** over last year? Simply that Goodyear Belting more than fulfills the claims made for it by the

Goodyear people—who know what a belt should do, and make a belt to do it.

It has cost us less than \$200.00 for claims or adjustment of every kind in connection with our total output for the past two years—a remarkable tribute to Goodyear reliability.

**Look into the Belt for Yourself—Try to Tear It Apart.**

Make a cut in the top layer—and then try to pull it apart. You will get a faint idea of its strength.

That is the result of forcing rubber at tremendous pressure through the fine cotton fabric—separating every strand—thus abolishing all internal friction or grinding. Whilst these layers of fabric are afterwards so compressed as to be almost homogeneous, the finished belt bends easily, the "duck" being so woven as to retain complete pliability in the finished belt.

**For Main Drives and  
High Speed Pulleys  
GOODYEAR Belting is the Best**

It has all the tensile strength necessary to absorb tremendous strain without slip, stretch or rent. The grip of rubber and the prodigious strength of hard-twist cotton fabric are united, and prove equal to every emergency.

Where the power transmitted is high, and great tensile strength is essential, Goodyear Rubber Belting proves its worth.

ber Belting proves its worth.

EVERY GOODYEAR BELT IS SUBJECTED TO A STRINGENT TEST BEFORE LEAVING THE FACTORY, and what is more, the materials used in the manufacture are also tested in the Goodyear laboratory before using.

### IF YOU USE A BELT AT ALL IT WILL PAY YOU TO USE A GOODYEAR

Loss of power is loss of profit—and an inferior belt is dropping power all the time. Goodyear belting quickly earns its cost in power saved and trouble avoided.

### TWO HUNDRED AND FORTY ROLLS—A TOTAL OF 72,000 FEET

We have just received an order for this quantity of GOODYEAR RUBBER BELTING from one business concern in the west, for the equipment of interior elevators. Such an order shows supreme confidence in the quality of GOODYEAR Belting.

If we have not just the belt you require we will make it for you.

In the choosing of belts our booklet would be of great assistance to you. We supply it free. Write to our nearest Branch for one.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

## Canada's Foreign Lumber Trade During Seven Months

Exports of forest products from Canada during the seven months ending with October 31st, 1912, totalled in value \$29,010,181, as compared with \$33,461,029 during the corresponding period of 1911. The high water mark for this period was reached in the year 1906 when the total value was \$45,750,470.

The imports of wood and manufactures of wood for consumption in Canada, during the seven months ending with October 31st, 1912, were valued as follows:—from the United Kingdom, dutiable, \$268,788; free, \$39,820; from the United States, dutiable, \$4,655,717; free, \$12,004,958; from other countries, dutiable, \$339,646; free, \$33,065.

The importations from the United States for the corresponding period of 1911 were valued as follows:—Dutiable, \$2,961,834; free, \$9,338,513. During the corresponding period of 1910 the imports from the United States were valued as follows:—Dutiable \$2,225,431, free \$7,504,024. It will be seen from these figures that the imports from the United States under both headings have increased rapidly during the last three years.

Some of the more important items making up the above totals of free goods from the United States were as follows:—Planks and boards, 1912, \$3,841,401; 1911, \$3,364,781; 1910, \$2,119,675; pitch pine, 1912, \$1,437,018; 1911, \$1,141,156; 1910, \$1,161,302; oak, 1912, \$1,890,110; 1911, \$1,485,821; 1910, \$1,343,664.

Exports of wood and manufactures of wood, the product of Canada, during the seven months ending October 31st, 1912, were valued as follows:—1912 \$33,279,003; 1911 \$30,382,316; 1910 \$35,116,039. Of these totals, the exports to the United States were valued as follows:—1912 \$22,353,130; 1911 \$19,423,903; 1910 \$22,444,027. Exports to the United Kingdom under the same heading were valued as follows:—1912 \$8,631,039; 1911 \$8,206,278; 1910 \$9,551,499.

In the above totals the exports of lumber to the United States were valued as follows: 1912 \$14,124,974; 1911 \$12,111,108; 1910 \$13,958,026.

Exports of pulp wood to the United States during these periods were valued as follows:—1912 \$4,687,183; 1911 \$3,550,888; 1910 \$4,487,810. Exports of wood pulp during these periods were valued as follows:—1912 \$2,573,472; 1911 \$2,713,848; 1910 \$2,696,807.

## Quebec Expecting Great Results

Hon. Jules Allard, Minister of Lands and Forests in the Quebec Government, expects great things from the policy of the Government in removing the restrictions on Crown Lands in the case of the Belgo-Canadian, Wayagamack, Laurentide and Price Companies. He told an interviewer in Montreal, that in his opinion the province of Quebec was on the eve of a great era of active development. The revenue of the Department of Lands and Forests had grown from \$1,000,000 five years ago to probably \$2,000,000 during the present year. The change in the law regarding the export of pulp wood, he added, would double the output of the pulp and paper mills affected by it, and would possibly result in the establishment of more mills. The pulp forests can be made perpetual, he believes, by careful cutting of the trees, and securing the renewal of the forests from the small trees every 40 years, and also by protecting the forests against fire.

The St. Maurice Valley was probably the richest pulp district in the Province, and there the limit holders and the Government had united in organizing a splendid system of fire protection. The construction of the dams on the upper waters of the St. Maurice would both allow the better floating of logs and provide a greater minimum of water power. The regulations of the Dominion Railway Commission, supplemented by similar regulations by the Provincial Public Utilities Commission would largely prevent fires from railway locomotives.

## Dr. Fernow Creates a Tempest

Quite a tempest has been stirred up by Dr. Fernow, Dean of the Faculty of Forestry of the University of Toronto, by a report presented at the recent meeting of the conservation committee at Ottawa. Briefly, Dr. Fernow's report was to the effect that probably 50 per cent. of the area included in the clay belt of New Ontario does not contain any wood value and probably the same percentage of it is undesirable under present conditions to open for settlement. Other features are discussed in the report among them being the outlook for agriculture, which Dr. Fernow considers to be quite bright. Dr. Fernow's words upon the forest situation were as follows:—

"The results of this enumeration permit the following statement. Hardly 10 to 15 per cent. of the forest is of the first-class, namely, containing sizes fit for logging. From 35 to 50 per cent. of the area may, by picking, furnish small-sized pulp wood. From 35 to 45 per cent. of the area is from the standpoint of wood supplies, useless; it is either muskeg, near-muskeg, or scrub wood of a size hardly fit for fuel. The record in seven development classes ran as follows, beginning with the best lands, in per cent.; 4, 5, 14, 21, 17, 18, 22, the last two figures representing muskegs open and with scrubby growth."

Needless to say this report immediately brought out a great deal of criticism from representatives of the government of Ontario to claim that Dr. Fernow took a hurried trip along the railroad lines so was not qualified to express so sweeping an opinion. Dr. Fernow sticks to his guns claiming that his report was amply justified by the investigation which he made and by information which he secured from other patries also.

## Growth of B. C. Timber Industries

The growth of the timber industry in British Columbia during recent years was discussed by Hon. Richard McBride, Premier of British Columbia, in a speech which he recently delivered at Victoria. In his remarks the Premier spoke as follows:—

"The timber industry is growing with the years. It was never upon a more substantial or satisfactory basis than to-day, and not only the sawmills, but many kindred auxiliary industries are flourishing. With the completion of the Grand Trunk Pacific, the Canadian Northern, the Island extensions of the Canadian Pacific, and the Panama Canal, it is not too much to say that our national asset in timber will easily be worth double what it is to-day. The completion of the Brooks-Scanlon pulp and paper mill plant at Powell River is in itself a epochal industrial event. Here, at a cost of upwards of \$5,000,000 there has been assembled one of the most complete plants of its kind in all the world. Those who travel north and south, if they can possibly make the connection should not fail to stop here and see this great enterprise in its operation—destined to be no inconsiderable factor in the future industrial life of British Columbia. The Ocean Falls Company too, at Bella Coola, has already invested more than \$2,000,000, and is preparing to complete its establishment in an additional cost of nearly a like amount. Within a year, both these great plants will be in full swing and demonstrating to the world that not only in timber production, but in furnishing the raw material for paper, the British Columbia forests are without rival. New pulp mill plants are projected for Nelson and Revelstoke districts, as well as at least one other coastal point.

# Lumber Trade of Ontario During 1912

**Remarkable Demand for Buildings, Railroads and Business Expansion Caused Rapid Depletion of Stocks and High Prices—Production Declined—Outlook Excellent**

The year 1912 in the lumber trade of Ontario was one which will be remembered particularly on account of the remarkable manner in which stocks were depleted in nearly all classes of lumber and on account of the steady stiffening of prices which accompanied the increased demand. To account for the development in the demand for lumber is not a difficult matter. To put the case briefly, Canada was prosperous. Every line of manufacturing industry experienced a busy year. To get back of this and find the cause for activity is also a simple matter. Canada has been enjoying good crops and the immigration into the country has been enormous. Everyone in Canada has been increasing his personal requirements for manufactured articles. Money has been circulated more freely than ever before. The new arrivals in the country have needed homes. They have made great demands upon the railways for transportation. In the first place those who have come into Canada from abroad have had to be transported with all their belongings—in the majority of cases—far into the interior of the continent. When they reached their destinations they immediately became prospective or actual customers for the retail lumber yards. They needed houses and barns, wagons and agricultural implements; all of which consist largely of lumber.

The people of Canada have had the means to develop the natural resources of the country in greater measure than in any previous year. Manufacturers have been filling orders to an extent which was never before experienced. All this increased activity has caused a wonderful increase in the demand for wood, as a raw material for manufacture and also as a crating and boxing material.

The railway companies in order to keep up with the demands made upon them for transportation facilities have been obliged to order large amounts of new equipment. Even with more equipment than they ever had before they have not been able to meet the requirements of trade and there has been great complaint on account of the inability of manufacturers to secure delivery of their goods in a satisfactory manner. The production of such large quantities of railway equipment has consumed greater amounts of lumber than ever before.

## How the Demand Worked Out

With conditions such as outlined above, it is easy to understand why stocks of lumber were rapidly consumed. There was no intricacy about the situation. People simply wanted lumber and they had the money to pay for it, in most cases. The most remarkable demand was for the low end of lumber stocks in general. Mill culls and dead culls in white pine, also hemlock and Norway pine were bought up greedily wherever they could be found. Mill cull sidings commenced the year at about \$13 to \$15. Now they are selling at \$17 to \$18. Hemlock went from about \$14 at the commencement of the year to \$20 for mill run culls out. Norway pine began the year at about \$19 and went to \$22 for mill run culls out. The hemlock situation was brought about by the shortage of stocks and by the enormous demand. Previous to the beginning of 1912, hemlock manufacturers had been losing money. They had not gone into the woods very extensively during the winter of 1911 and 1912. They were not prepared therefore, for the great demand which developed during 1912. The output of the mills for that year was less than it had been in the year previous when hemlock was very difficult to sell. Accordingly, as the demand increased throughout 1912, it became continually more difficult to secure stocks and to-day the outlook is that the shortage will continue for some months to come. The present situation in connection with hemlock is a difficult one to interpret. Manufacturers have not gone into the woods quite so extensively as last year, and the weather conditions are so unusual that one cannot with any degree of certainty foretell what the output will be when the winter's operations are finished. Last year's high prices for hemlock encouraged manufacturers to increase their logging output this winter, but on account of shortage of labor and a reduced peel of bark they were unable to do so.

Yellow pine was imported in Ontario extensively last year, but the demand for all kinds of lumber was so active that the southern wood was not a depressing factor in the trade. At present prices, yellow pine does not compete with hemlock, but there is a tendency to-day among many of the manufacturers of yellow pine to lower their prices. It would not take much of this to put yellow pine again into keen competition with hemlock.

An interesting feature of the trade in Ontario during 1912 was the increased arrival of spruce from Eastern Canada. Eastern spruce has been selling in Ontario for many years but the situation which developed last year made it possible for spruce to come from the

Maritime Provinces and find a fairly profitable market in Ontario. It now looks as though the Ontario trade has given a permanent place to Eastern spruce in its stocks and that continual increase in the sales may be looked for in the future.

## Hardwoods Had a Busy Year

The year 1912 started off so far as the hardwood trade in Canada was concerned, with very low stocks of hardwoods in all hands and an exceptionally heavy demand. The condition of this country in hardwoods in fact was unprecedented because the demand was so much greater than it had ever been before that manufacturers in general were not prepared for the abnormal situation. They were never able, during the whole year of 1912, to catch up with the demand and they are still behind. To-day there is no dry stock on the market. This situation is working against the trade for 1913, because manufacturers are still behind on 1912, and now a situation develops of an apparent shortage for 1913, with a large number of manufacturers still trying almost in vain to fill 1912 orders. Neither the producers nor the consumers know how to act. The consumer does not know what stocks he can depend upon for this year and the producer is afraid to give him any encouragement upon the matter either way.

There was a very heavy demand for all the thinner sizes of birch during 1912, and a particularly heavy demand for one inch flooring stock. The very material advance in soft woods such as low grade hemlock, pine and spruce during 1912 brought the cull hardwoods into prominence until they were selling at as high if not a higher figure than ever before and in the face of this situation no stocks are now offering.

Basswood during 1912 was a very strong proposition and the same may be said of elm. This was the result, not so much of a greatly increased demand as of the fact that the visible supply of basswood and elm in Canada is rapidly disappearing.

Brown ash was in heavy demand during 1912 as a trim owing to the enormous amount of building which was carried on, and at the same time as a result of the very high price of oak.

The heavy demand from the implement manufacturers during 1912 took off the market everything in the shape of maple that was produced during the season.

A prominent Ontario manufacturer speaking of the situation says that he does not think there was ever a time in the history of hardwood lumber in Ontario when there was so little cull hardwood on hand as at present and he does not think that there ever will be such a scarcity again. This situation is exactly the reverse of conditions which had prevailed for some time past. Hardwood manufacturers were formerly unable to get rid of their cull stocks. During 1912 and at present, they have scarcely been able to obtain any stocks of this class. An indication of the urgency of the demand for cull hardwood is afforded by the fact that manufacturers who are taking out stocks to-day are shipping, first of all, their low cull end. Flooring manufacturers at present are scouring the country for the cheaper lines of maple and birch and are scarcely able to secure stocks at all.

## Manufacturers Sold Far Ahead

The manufacturer referred to above, states that if they were willing to accept all the orders offering to-day they could sell out their whole supply for the next three years, but they are afraid to contract so far ahead, because they do not know how much they will be able to take out of the woods this winter. They are at present sold well ahead; so far ahead in fact, that they feel that it would be unsafe to contract any further into the future.

From all parts of Canada to-day the report comes that the exceptionally mild winter has brought about a serious situation. In northern Quebec there is quite a lot of snow, but it is without any bottom and there is little or no frost. Throughout that part of the country lumber conditions are very bad. In southern Quebec and in the east there is no snow whatever, nor any frost, and the same serious situation exists as in northern Quebec. A few places in northern Ontario are favored with plenty of snow. Hauling has started at these places, but it is a very doubtful question whether the snow will last long enough for them to take out a fair supply of logs. These conditions obtain in districts where the haul is short and does not cover swampy country or lake country. Wherever the hauling has to be done across lakes or swamps, it has been impossible up to date to take out any logs at all. Most of the lakes are frozen over but there is not sufficient ice to bear the weight of teams. Taking things altogether the situation is both exceptional and serious and is being

watched anxiously by all who are interested in lumbering operations.

#### Lumber Cut of 1912 Showed a Decrease

Statistics which have been gathered by the Canada Lumberman show that the lum' er production of Ontario, exclusive of the Ottawa Valley during the year 1912 amounted to 785,234,661 feet. This total compares, according to reports from the same firms for the year 1911, with a total of 831,472,640 feet. There was therefore a falling off in the production of 1912 as compared with the previous year of 46-237,979 feet. Reports from the Ottawa Valley for the year 1912 show a total lumber production of 555,882,000 feet compared with 521,024,000 feet in 1911. The Ottawa Valley production therefore, shows an increase for 1912 of 34,858,000 feet. Adding the two 1912 totals for northern Ontario and the Ottawa Valley together the grand total of 1,341,116,661 feet is reached which compares with 1,352,496,640 feet for the year 1911. During the year 1912 therefore the total lumber production of northern Ontario and the Ottawa Valley showed a decrease as compared with 1911 of 11,379,979 feet.

In northern Ontario a considerable decrease is accounted for by the fact that a number of the important mills in the Georgian Bay district and along the north shore of Lake Huron, either were out of operation or had been destroyed by fire. Some idea of the reduction caused by this situation may be secured from the reports received from these mills. Among these are the following:—Blind River, 1912, 18,451,593 feet; 1911, 31,757,013; Parry Sound, 1912, 25,700,000 feet, 1911, 36,000,000 feet; Thessalon, 1912, 7,642,592 feet 1911, 17,202,627 feet. With the above decrease must also be included that of Byng Inlet, where the important mill belonging to Graves Bigwood & Company with an annual production of some 50,000,000 feet was destroyed by fire early in the year.

On the other hand some of these decreases were counteracted by large increases at other points, among them being the following:—Keewatin, 1912, 31,000,000 feet, 1911, 26,000,000 feet; Longford, 1912, 14,500,000 feet, 1911, 6,800,000 feet; Midland, 1912, 81,829,000 feet, 1911, 58,893,186 feet; Owen Sound, 1912, 17,200,000 feet, 1911, 8,900,000 feet; Sarnia, 1912, 32,000,000 feet, 1911, 29,000,000 feet; Spanish Mills, 1912, 35,000,000 feet, 1911, 28,600,000 feet.

The production of lath in Ontario during the year 1912, according to reports received by the Canada Lumberman amounted to 257,484,930 pieces as compared with 253,509,890 pieces during 1911.

#### Georgian Bay and Northern Ontario Lumber Production

The lumber production in Northern Ontario, exclusive of the Ottawa Valley, during 1912 and 1911 was as follows:—

|                      | 1912.      | 1911.      |
|----------------------|------------|------------|
| Appleby .....        | 60,000     | 120,000    |
| Barry's Bay .....    | 90,000     | 80,000     |

# Ottawa Valley Lumber Production

**Large Firms Increased Their Cut—Total Output of Over 564,600,000 Feet—Woods Operations More Costly**

Ottawa, January 27th, (Special to the Canada Lumberman): An analysis of the lumber industry of the Ottawa Valley shows that business in 1912 was exceptionally gratifying. The lumber production shows an increase for 1912 over 1911 of 43,581,000 feet. In 1911 the output was approximately 521,024,000 feet and in 1912, 564,605,000 feet.

Ottawa Valley lumbermen are unanimous in believing that never did a year open with a more hopeful and encouraging outlook than 1913.

The crops of 1912 were gigantic and the great fact to-day is that business conditions in Canada are sound. Men in every class of business are prosperous with a vision of greater prosperity. Canada is making such rapid strides in every branch of industrial activity that the importance of the lumber industry is not regarded by the average layman with the significance to which it is entitled.

Since Ottawa was made the capital of Canada less than three-quarters of a century ago its reputation as an important lumber center has been more and more overshadowed for the general public. But in spite of this, lumbering and woodworking are still the most important industries in the city and district. The value of last year's cut in the Ottawa Valley represents fully \$13,000,000, at a very conservative estimate.

The exports of forest products during 1912 to the United States from the Ottawa Consular district show an increase over 1911 valued at \$227,000. The exports for last year amounted to \$3,732,032.50 as against \$3,504,956.45 for the previous year.

## Extensions to Manufacturing Plants

Some examples of improvements and extensions made in 1912 by lumber and woodworking firms in Ottawa have just been made public by the publicity commissioner for the city. McAuliffe and Davis purchased a large site for a new yard and planing mills, and also commenced work on additions to their Duke street sheds. W. C. Edwards Company built a new box factory at a cost of several thousand dollars. The Greater Ottawa Sash and Door Company opened up a fairly large plant. James Oliver and Sons, furniture manufacturers made their factory almost double its former size. The Estate James Davidson also enlarged their factory.

Outside of the city similar signs of progress have been evident. Several extensive additions and improvements were made to the plants of both the Pembroke Lumber Company and the Colonial Lumber Company of Pembroke. The E. B. Eddy works at Hull spent a fortune on enlargements and improvements.

## Increases in the Ottawa Output

With few exceptions all the larger firms cut more logs in 1912 than in 1911. J. R. Booth cut about the same last year as the year before. His cut totalled 80,000,000 feet. The cut of the W. C. Edwards Company was a little less in Ottawa last year than in 1911, but the cut at the mills in Rockland was greater, so that the total in 1912 for the two mills remained about the same as in 1911. The Shepard and Morse Company of Ottawa cut a few thousand feet less in 1912 than in 1911, but they cut a good many more lath. Business on the whole was very satisfactory, with this firm.

Substantial increases were made in the cut of the Pembroke Lumber Company as well as by the Colonial Lumber Company. To summarize generally the volume of trade in this district for the past year has been infinitely better than it has been for several years past. Every lumberman reports that trade has been greater and that the prices for both high and medium grade lumber have been better. The advance in the price of low grade has been comparatively slight. From ten to fifteen per cent. has been the volume of the increase in the high and medium grades and a further advance is inevitable, it is said, within a few weeks.

So great is the demand for lumber that few yards have a very big stock on hand. Not a single firm reports carrying a heavy stock in any grade. To a number of questions submitted to nearly two score of the leading firms in the district the answers were all indicative of good business in the past year with an expectation of better things this year.

The popularity of reinforced concrete buildings has created an abnormal demand for low grade lumber. There has been a noticeable increase in the demand on the part of the United States, for medium grades. Great Britain has provided a good market for the best grades and the firms, that make a special business of supplying the British market report that the prices offered are very satisfactory indeed.

It may seem a little early to predict how the winter's logging activity will result. So far the weather has been a serious obstacle to the best results. There has been scarcely any snow or ice in any

part of Eastern or Northern Ontario and Quebec, and if some does not come very soon it will be very difficult to get the logs out of the woods.

The supply of men in the past year has been none too good, though wages have increased. Lumberjacks in the camps to-day are paid \$35 a month with board, while a few years ago they got about half that amount. And the board bill of a lumber camp in this day and generation is considerably higher than a decade or so ago. It used to be that pork and beans was one of the chief items of the diet of a lumberjack, but now he wants and gets as varied a menu as any good hotel would provide, yet his appetite has not altered since the old days.

All classes of men employed in the mills and yards are getting exceptionally high wages compared with a few years ago. General expenses too, have increased so rapidly of late that an increase in the price of lumber is inevitable and justified.

If the outlook of the lumber trade can be taken as a criterion of the general condition of trade, no setback to the national prosperity is probable. Nothing can change the great fact that labor is employed at high wages, that all classes are prosperous and that business conditions are good and the vision is encouraging.

## Canadian Railroad Tonnage and Equipment

During the year ending June 30th, 1912, the railroads of Canada had in service the following equipment:—locomotives, 4,484 (an increase of 265 over the previous year); freight cars, 140,918 (an in-

crease over the previous year of 13,760. During the same period the railroads of Canada transported freight, the products of the forests, as follows:—tonnage originating on the road, 4,528,104; tonnage received from connecting roads, etc., 1,495,303; total, 6,023,407. During the same year the Canadian railroads made the following shipments of lumber:—tonnage originating on the road, 6,259,580; tonnage received from connecting roads, 1,869,734; total lumber tonnage, 8,129,314.

### Ontario Crown Lands Timber Statistics

The following statement shows the quantity of timber cut on lands of the Crown of Ontario during the year ending 31st of October, 1912:—

|                                              |                                    |
|----------------------------------------------|------------------------------------|

| Area under timber license, square miles .... | 18,410 <sup>3</sup> / <sub>4</sub> |

|                                      |                |
|--------------------------------------|----------------|
| Accruals from timber dues, etc. .... | \$1,972,091.20 |
| Ground rent ....                     | 95,969.18      |

### Comparisons With 1911

\$2,068,060.38

During the year 1911 the cut of pine logs was 584,264,105 feet. There was therefore, during 1912, a decrease of 122,599,704 feet. An increase is shown in the quantity of railway ties cut on Crown lands.

During 1912 the total was 4,270,832 ties, which is an increase of 1,433,633 ties. A large decrease is shown in the production of tanbark, which amounted in 1911 to 16,570 cords. The production during 1912 showed a decrease, therefore, of 10,650 cords. The cut of pulpwood during 1911 was 90,726 cords. During 1912, therefore, there was an increase of 49,607 cords.

The area under timber license during 1911 was 19,349 square miles. There was during 1912, therefore, a decrease in the area under timber license of 938 square miles.

The staff of Crown timber agents and supervising wood rangers employed by the department during 1912 numbered 18. There were 133 forest rangers employed and the fire rangers on unlicensed Crown lands and forest reserves numbered 554. Their services cost \$210,000. On lands under timber license 375 fire rangers were employed at an approximate cost of \$100,000.

### Ottawa Valley Exports to United States

There was an increase of \$227,130.05 in the value of the lumber exports from the Ottawa Consular District to the United States last year. In 1911 the exports were valued at \$3,504,952.45, and in 1912 were \$3,732,082.50. The figures just issued by Hon. J. G. Foster, United States Consul at Ottawa, are as follows:—

|                                    | 1912         | 1911           |
|------------------------------------|--------------|----------------|
| Ash ....                           | \$ 4,889.01  | \$ 11,475.18   |
| Basswood ....                      | 2,450.69     | 5,993.78       |
| Hemlock ....                       | 39,708.78    | 11,295.24      |

# New Brunswick Trade had Strange Year

**High Freights Checked Business Early in Season—Advances in Fall Meant Little Profit—Soft Winter Reducing Log Output**

St. John, N.B., Jan. 18th, 1913. (Special correspondence to the Canada Lumberman):—The lumber industry along the St. John River and in the city of St. John, has come through a year which has been very peculiar in many ways. At the beginning of the year the appearances were as discouraging as it was possible for them to be. During the month of September, 1911, the price and demand for all kinds of wood goods had fallen flat, with practically no one offering to buy the cuts of the mills that had not disposed of their season's work in the early spring, and no one looking for any surplus over and above the amounts which they had contracted for. All the buyers were very careful to allow none of the sellers to more than fill the amounts of their contracts, which was something unusual and gave no clue as to how the buyers felt about future sales. This state of affairs continued until February of the year just passed, when a slight advance in price took place and a few deals were sold at \$15 for a specification of 50 per cent. 7-in. and 8-in. x 3-in. with other sizes at reduced prices. But that was only for a few days. Then the sellers simply retired from the market and would not purchase anything, or if they made any offers the prices were so ridiculously low as to allow of nothing but a loss to the manufacturer.

## Effect of the High Freight Rates

One cause for the low prices was, of course, the high rate of freights beginning with the liner sailings during the winter of 1912, and advancing steadily until the fall of the season just past. Liner freights advanced from 35s to 50s and 55s per standard, tramps for summer loading receiving on an average of 60s. In fact it was said that as high as 80s was paid during the past season. This advance in freights, the buyers on the English market had simply refused to pay, as the business in England had been much restricted. Stocks were fairly large, and the stock being held in New Brunswick very much heavier than for some years. So, everything tended to make the buyers sit down and wait, which they evidently did, and the English buyers in this section continued to wait all through the season of 1912 up to about October the first, when business on the other side had taken up practically everything that had been shipped. Stocks were very low, the Rigas were not coming very freely, as the manufacturers had very low stocks of logs, many of them not being able to supply any of the contracts they had taken, owing to a very severe thaw in the winter which had in many places practically barred them from getting their logs to the mills. As it is well known that the worst competitor N. B. deals have are the Rigas, the buyers were able to force the consumers to pay the advance on freights, thereby making it possible to give the seller on this side the prices they asked, which was about \$15.50 per M. for a specification running, some at 50 per cent. 7-in. and 8-in. by 3-in., balance 9-in. by 3-in. and up, or 60 per cent. 7-in. and 8-in. x 3-in., balance 9-in. x 3-in. and up, according to sale. Those persons who did not sell in early fall, but held on until November, received anywhere from \$15.75 to \$16 per M. for their deals.

The late prices for deals, say at \$16, were the highest paid in this section at any time in the history of the milling business. Still it was not what can be called a very satisfactory year. The cost of logs in the first place increased in the deals, as they had to be held during the whole season, which meant at least 50c per M. The price of labor and the scarcity of it made an advance over the previous year of 10 to 15 per cent., making an increase over the previous year in the cost of the manufactured article of at least 75c per M., so really the man who sold his deals for \$16 in 1912 was not as well off as the person who sold deals in 1911 for \$15.50.

## Trade With United States

As to the American market, much the same can be said of it as of the English market for 1912. While the price of American goods advanced anywhere from \$2 to \$3 per M. over 1911 prices, the persons who were favored by that advance did not manufacture at St. John, but were largely operators who were able to rail direct from their mills and not by water shipments, as all coastwise freights practically advanced with the market, beginning at \$2.75 in very early spring and going to \$4.50 about July 1st, remaining steady at that price for the balance of the season. But it was not always the question with the shipper of how much freight he was going to pay, but whether he could get the tonnage. In many cases they were unable to do this. Also some manufacturers here had sold, in early spring, stock at a delivered price, and in some cases were forced to pay at least \$1.00 to \$1.50 more freight than they figured upon, thereby making the business exceedingly unprofitable. St. John is not a car point, no

mills having any trackage into their yards, which means they must cart stock to cars at a loading cost of anywhere from \$1.00 to \$1.25 per M. besides an extra expense for survey and fees of 40c to 50c per M., which with discounts usually demanded by customers, means an expense of from \$1.75 to \$2.00 per M. for all car business. So, one can see that unless prices advance higher than at present, St. John will not figure to any extent in a profitable car business.

A great deal more stock was shipped to United States markets in 1912 than in 1911, as many of the mills, being unable to sell their cuts to the English market, were forced to turn their attention to the American business. During the season of 1912 the price of long average stock never reached a level to correspond properly with that paid for short average stock, comparing the price of the two kinds of logs. Prices of 2-in. x 3-in. to 2-in. x 4-in., sized, short average length, were about \$16 f.o.b. St. John, and 2-in. x 6-in. about the same price, only in limited quantities, along with 2-in. x 8-in. and up at \$17 to \$18, the rate of freight being 14c per 100 lbs. to New England points; spruce boards, mill run 4-in. and up wide, \$14.50 f.o.b. St. John; random cargoes, 2-in. x 3-in. and up, containing about 40 per cent. to 50 per cent. 2-in. x 8-in. and up, short average, left the shipper about \$15.50 by water shipment to New York, for long average stock, the net price being about \$18.

## A Troublesome Year for Manufacturers

Viewing the year from the manufacturing standpoint, while it has not spelt loss to the mill men, still it has been a very worrying year.

Labor has been in an uproar at all times. Wages increasing 10 per cent. practically at the start and the quality fell 10 per cent., thereby lessening the product of the mills per day. Unless labor conditions at this port changes greatly in the near future, it is felt that it will be almost impossible to manufacture at all. The men make all kinds of demands, going and coming as they please, and never for a moment considering the owner. Therefore, it will be found that the year will be only an average one to the manufacturer. The persons who have benefitted in 1912 have been the lumber shippers from this port whom we understand have had a very profitable year.

## The Year's Sawing Results

During the year 1912 about 100,000,000 of logs were rafted at Fredericton, of about one hundred and twenty-five million feet. This, on the River St. John in 1912 for the St. John mills and mills at Fredericton, of about one hundred and twenty-five million feet. This, together with about twenty-five million held over from 1911, meant one hundred and fifty million for 1912, there are still on hand in the booms at St. John about forty-five million of logs, showing that the mills have sawn about one hundred million during the season just closed. This is a fair season's work. All mills are now closed, some to resume about April 1st, or according to the mildness of season, early spring.

As to the prospects for 1913, to begin with the season on the St. John has been, for logging, one of the worst in years. All through the year just gone, heavy rains have fallen and they still continue. On the head of the St. John River the ground and woods were in a frightful condition all fall. This retarded the yarding of logs, besides this labor or the woods was and is extremely scarce, and what you do get, besides paying a high rate is very inferior. This has tended very much to decrease the cut, and at present writing the operators, especially on head of river, are upwards of a month behind in their yarding. In the lower sections of the country, about same conditions prevail. It is felt that not over thirty millions of logs will come over Grand Falls for St. John unless conditions change, and unless we get some snow at once in the lower sections of the country the cut will be reduced to at least one-half, as practically no logs have been hauled off yards.

## Buyers Meet a Waiting Market for 1913

Both English and American buyers are out trying to buy, but are meeting with little success, as mill men will not sell until they feel pretty safe with regard to their logs coming out. Stocks are low, both on English and American markets, and also at mills throughout the province. The cut of logs will be materially short. Consumption still remains good. Business in general seems to be on a good sound basis, with the exception of the war scare and certain political and labor agitations which will no doubt right themselves. Shipments will be small both from this port and the Baltic until spring. Therefore, it looks to the writer as if business on the English market will be good, at least till midsummer, and unless something

unforeseen arises in the American market prices should be maintained on the level of 1912. Of course we all believe that the time is not far distant when spruce must advance to a much higher price, as it is getting very much smaller and practically speaking the River St. John is getting to be nothing more than a pulp country which the pulp mills are drawing upon. We understand that another pulp mill is soon to be built, which will mean in time a very much higher price to be paid on competition with pulp mills. Either the consumer must pay more or the mills will have to go out of business.

#### Trans-Atlantic Shipments From St. John

The extensive advance in ocean freight rates which were so noticeable during the year 1912, resulted, as would be expected, in a large falling off in the shipments of deals, etc., from the Maritime Provinces. Shipments from St. John, N.B., to trans-Atlantic ports during the year 1912 decreased considerably from this cause, although to some extent the manufacturers were compensated by the good demand for their product which was found in the eastern states.

The trans-Atlantic shipments from St. John during the year 1912 compared with those of 1911, are shown in the following table:—

| Port         | Year | Vessels | Tonnage | Sup. ft.    |
|--------------|------|---------|---------|-------------|
| Liverpool    | 1911 | 37      | 243,053 | 19,862,088  |
|              | 1912 | 43      | 279,103 | 19,178,393  |

|              | 1912 | 1       | 186     | 200,040     |
| Westport     | 1911 | ..      | ..      | ..          |
|              | 1912 | 1       | 115     | 257,133     |
| South Africa | 1911 | 5       | 12,112  | 2,505,345   |
|              | 1912 | 5       | 14,170  | 1,902,731   |
| Australia    | 1911 | 4       | 21,718  | 2,174,256   |
|              | 1912 | 5       | 19,077  | 3,072,647   |
| Totals       | 1911 | 159     | 568,242 | 125,237,141 |
|              | 1912 | 155     | 588,427 | 82,040,963  |

The largest shipper during the year was Mr. W. Malcolm Mackay, who sent out 29,949,212 feet of deals, etc. John E. Moore & Company were not far behind in their total, which was 28,252,797 ft.

Exports of timber were not extensive. Mr. Geo. McKean shipped 1,002 tons; Mr. W. Malcolm Mackay 949 tons; Messrs. John E. Moore & Company 351 tons, and other shippers 28 tons.

#### Shipments from Other New Brunswick Ports

From other New Brunswick ports the shipments were as follows:—

| Campbellton |                |                         | Richibucto |                |                         |
|-------------|----------------|-------------------------|------------|----------------|-------------------------|
| Year        | No. of Vessels | Deals, etc., Sup. Feet. | Year       | No. of Vessels | Deals, etc., Sup. Feet. |
| 1911        | 25             | 39,291,355              | 1911       | 3              | 775,792                 |

Campbellton in 1912 sent 13 vessels of 19,452 tons to South America with 16,734,657 superficial feet of deals, etc.

Any deals, etc., shipped from Richibucto this year went through Newcastle.

|---------|----------------|-------------------------|--------|----------------|-------------------------|
| Year    | No. of Vessels | Deals, etc., Sup. Feet. | Year   | No. of Vessels | Deals, etc., Sup. Feet. |
| 1911    | 21             | 36,878,903              | 1911   | 6              | 17,407,415              |
| 1912    | 31             | 45,633,040              | 1912   | 6              | 9,421,345               |

An interesting fact to be noticed in the above reports is that the shipments from the Miramichi and from the outports of Sackville increased greatly during 1912. Practically all the other ports, with the exception of Shediac, report a decrease in shipments.

Shipments from the whole province during the year 1912 compared with those of the three previous years were as follows:—

| Year | No. of Vessels | Tons    | Deals, etc., Sup. Feet. |
|------|----------------|---------|-------------------------|
| 1909 | 339            | 822,272 | 325,213,639             |
| 1910 | 334            | 847,845 | 327,519,421             |
| 1911 | 287            | 725,443 | 285,981,379             |
| 1912 | 289            | 748,230 | 245,806,682             |

The decrease for 1912 is shown by the above figures to be nearly equivalent to the decrease in shipments from the port of St. John.

#### Timber Exports from Fredericton to United States

Exports from the Consular Agency of Fredericton, N.B., during the year 1912 showed a total value of \$1,038,799.20, as compared with \$623,762.06, for the year 1911. One of the chief items of increase was the export of lumber for which the detailed figures were as follows:—

|               |             |
|---------------|-------------|
| Fir           | \$1,496.29  |
| Hemlock       | \$36,874.18 |
| Mixed         | 29,856.29   |
| Pine          | 53,625.50   |
| Spruce        | 341,960.53  |
| Products:     |             |
| Laths         | 91,743.80   |
| Poles         | 630.05      |
| Shingles      | 25,150.78   |
| Ships' knees  | 1,551.01    |
| Ties, railway | 160.00      |
| Pulpwood      | 114.50      |

Total .. \$551,180.30 \$714,231.72

Exports to United States of lumber and lumber products for the last quarter of the year 1912, from the same Consular Agency, were as follows:—

|              |            |
|--------------|------------|
| Lumber:      |            |
| Hemlock      | \$7,504.88 |
| Mixed        | 1,677.88   |
| Pine         | 6,427.03   |
| Spruce       | 93,193.40  |
| Products:    |            |
| Laths        | 9,450.48   |
| Shingles     | 17,581.78  |
| Ships' knees | 513.75     |

Total .. \$4,635,020

Mr. Jas. Scott, formerly of the Scott Lumber Company, will be in the employ of the Fraser Lumber Company at the new mill at Fredericton during the coming year. This mill is being thoroughly overhauled and remodelled, and will be ready to start operations at opening of navigation.

Messrs. F. E. Sayre & Company are making extensive repairs to their mill here, and will re-build their chimney and remodel the mill for coming season.

It is said that Messrs. Hilyard Bros. will saw for Messrs. Stetson Cutler & Company during 1913.

Mr. J. Fraser, of Messrs. Murray & Gregory, left on January 20 for an extensive trip to the West Indies and will not return until March 1st.

Mr. F. B. Cutler, of Stetson Cutler & Company, was a recent visitor here, he is making a tour of the different Stetson Cutler & Company mills in this province and also in state of Maine.

We understand one concern at St. John has sold two million deals for coming season to W. M. Mackay at a price said to be \$16 per M. but other operators feel disposed to wait. No logs are being offered

# Nova Scotia Trade Marked Time in 1912

## High Freight Rates Interfered With Profits — Large Operators Held Back Shipments—A Better Outlook for the Present Year

Halifax, January 17th, 1913:—The year 1912 was not a banner year for the lumbering industry in Nova Scotia. The operators made no money. High freights took all the profits. The shipments fell below the average, the larger operators holding back for more advantageous returns. The total output in this province has been placed at as high as five hundred million feet, one-half of that amount being exported and the other half consumed at home. Conservative figures, however, place the 1912 output at three hundred million feet, and this will likely be found closer to the mark. The outlook for 1913, however, is very encouraging. Prices in the English market are likely to improve. It is held by operators that the English trade is getting its lumber too cheaply and must eventually pay better prices. No great change is likely to occur in the United States market, which was very good during 1912.

### Important Timber Transfers During 1912.

Several valuable properties changed hands during 1912 and others are at the passing of the ways. A property on the Avon River passed to outside interests, headed by E. Grant, of St. John's, Newfoundland. The Brooklyn Lumber Company, acquired the areas held by C. E. Crowe, situated at Brooklyn, comprising about fourteen thousand acres. Messrs. Curry, Atkinson and other Amherst parties secured the areas known as the Davison Hill Property, in Colchester and Cumberland counties. The Grant interests are negotiating for the Mills areas in Annapolis county. These embrace about one hundred and twenty-five thousand acres. The price paid for the properties enumerated above was in the neighborhood of three dollars an acre, though one small property, pretty well cut out, changed hands at one dollar per acre.

A prevalent idea is that the Nova Scotia lumber areas are being depleted and that the lumber is being cut faster than it is growing. This idea is even held by some operators. Careful enquiry, however, fails to show any cause for alarm. One who is competent to express an intelligent opinion on the subject asserts that the Nova Scotia lumber supply is not diminishing to any extent and that the province will continue to be a great lumber country for many years to come. Some people see a danger to the industry in the manufacture of pulp wood, but where the pulp and lumber industries go hand in hand there is little to fear. The danger is in cutting large timber for pulp purposes, but this can be avoided. As it is now the tops of the large trees, useless as lumber, are left on the ground where they retard growth and also are a source of danger from fires. These are all right for pulp wood. Of course there is always a large available supply of pulp timber in the swampy lands where the soil is cold and the growth accordingly stunted. The pulp business is therefore not dependent on the larger growth.

Quite a business was done during the summer months in Lunenburg county in the hemlock bark line. This was pressed, baled and shipped to the United States, where a good price had been guaranteed.

### Davison Company's Operations

The Davison Lumber Company are the largest operators in the province and their output was not materially lessened during the past year. This company was formed a few years ago, when the Davison areas and mills on the Lahave River were taken over by a syndicate of wealthy citizens of the United States. The areas embrace about 210,000 acres and the price paid is said to have been a million and a quarter dollars. The company have since spent half a million on mill improvements and a railway system, and their plant is said to be the most up-to-date in Lower Canada. About eighteen hundred men are employed. This company was the largest individual shipper in the province for 1912, their shipments totalling 30,000,000 feet. They report that business grew better as the year proceeded. They look for brisk times in 1913, and are preparing accordingly.

The amount of lumber shipped from the ports of Annapolis, Bear River and Digby during the year reached a total of 24,000,000 feet, the value being about \$500,000.

Owing to the non-operation of the largest tract of timber land in Shelburne county—that of Jordan River—the cut and export of lumber in that county is very much smaller than one would expect from a county that has so much timber acreage. The Jordan River timber lands, consisting of 60,000 acres, are capable of yielding, by judicious operations, an annual cut of ten million feet for all time, providing fires are kept out of them. At present it is hoped that operations in this region will begin again and that soon the county will be deriving

benefit from these areas which, for the past few years, have been practically untouched.

The other sections of Shelburne—those of the Shelburne River and Clyde River—have been operated in a small way, with the result that about five million feet of lumber have been produced, principally pine and hemlock, with a small quantity of spruce. This lumber has been exported from Clyde River and Shelburne, the pine going principally to the West Indies and the hemlock to the United States, while the spruce found a good market at home in the various shipyards of the county. The outlook for 1913 is that about the same amount of lumber may be expected from Shelburne county as in 1912.

### Eastern Nova Scotia.

The estimated cut from Pictou east was from twenty-five to thirty million feet. This virtually embraces the territory from Truro to and including Cape Breton. The three largest operators are:—J. D. and P. A. McGregor, Limited, Rood and McGregor, and the Nova Scotia Steel and Coal Company.

There are few rivers in eastern Nova Scotia and consequently most of the lumbering is done by portable mills that are put in the woods, the sawn product being hauled out on the snow to the railway. The greatest exception to this rule is the St. Mary's River, in Guysboro County, where the limits are controlled by the Maritime Lumber Company and where little or no work was done during the year. The same may be said of the Liscomb district. The Scotia Lumber Company, however, took quite a large drive down the St. Mary's River, which they sawed at Sherbrooke—probably several million feet. They are again operating.

The cuts made by the two McGregor companies and the N.S. Steel and Coal Company probably run from four to five million feet per year each. There are no large tracts of timber lands in this district such as there are in the western part of the province. Of the lumber cut, about one-half is spruce and one-quarter each of hardwood and hemlock. The bulk of the hardwood and one-half of the spruce is shipped to England in the form of deals. The rest, including all the hemlock, is used in the local market, including Cape Breton which now takes a large amount of stock for work around the collieries and other large industries. The Nova Scotia Steel and Coal Company use their whole cut for their own purposes at Trenton and Sydney Mines.

The men employed in lumbering are mostly men from the farms, who go into the woods every winter. A large number come over from Prince Edward Island every year for the same purpose.

### Pit Timber Operations.

A phase of lumbering in this district which has reached considerable proportions, is that of supplying pit timber for the collieries, both on the mainland and in Cape Breton. This is nearly all taken out by farmers, from private wood lots, during the winter months. The ever increasing demand for pit wood is bound to have a serious effect in the future in diminishing the wood supply, inasmuch as it uses up the small growth.

In Cape Breton there is very little spruce, that is heavy spruce, and such as there is has been largely cut out for the Sydney market. There are of course the large areas of the North River Pulp and Paper Company, in Northern Victoria and Inverness. This property does not contain much wood suitable for saw logs, and little or nothing has been done with it as a pulp proposition. Most of the lumbering in Cape Breton is on a very small scale and consists largely of cutting out for local demand.

In the old days great quantities of hewn birch timber were shipped from Pictou to Great Britain. Guysboro and even Middle River, Cape Breton, participated in this trade. The birch timber business still survives, but the firm of J. D. and P. A. McGregor are the only people now in it. The timber is shipped to Halifax by rail and thence by steamer to Liverpool and London, with an occasional shipment to Glasgow. An ordinary year's shipment is from 2,000 to 2,500 tons of this stock, which is hewn square to an average girth of from 14 to 18 inches.

A United States company under the management of Mr. Dixon, have recently acquired some timber lands in Antigonish county, and are clearing out the various rivers running into Antigonish harbor, with a view to operating there and erecting a large mill at the harbor.

### Hants County Output.

Hants county contributed about forty million feet to the province's lumber output of 1912. The total shipments from the port of Wind-

sor were in the neighborhood of twelve million feet of spruce, pine and hemlock, with the largest percentage of the latter. This stock was mostly cut along the lines of the Midland and D.A. Railways, from Mt. Uniacke to Windsor. This 12,000,000 feet went entirely to United States ports. The Windsor shipments were handled entirely by three United States firms:—The Knott Sampson Lumber Company, the Stetson Lumber Company and the Dun-Oliver Company. The principal operators were:—The St. Croix Lumber Company, Hartville; J. N. Bullivant, Stillwater; Parrsboro Lumber Company, Windsor Forks; Wm. McNeil, Windsor Forks; Crowe Lumber Company, Brooklyn; McDougall Bros., Upper Kennetcook; Gray and McKenzie, Barton's; Atlantic Lumber Company, South Maitland; Nova Scotia Lumber Company, Walton; Minesville Lumber Company, Minesville; Wm. Stevens, Tennycap, and others with a more limited output. The advance in freights from \$1 to \$1.50 per thousand over last year, of course cut down the profits.

The Maritime Lumber Company, with mills at Stewiacke, Laurencetown, Musquodobit Harbor, Ship Harbor and Sherbrooke, cut about eleven million feet, a great part of which they are carrying over, the balance having been shipped to the United States. They have nearly two million feet of logs on hand.

#### Bridgewater Shipments

Total shipments from Bridgewater were about 45,000,000 feet, including the Davison Company's shipments of 30,000,000. Probably 60 per cent. of all this lumber went to the United States, with the greater part of the balance divided between South America and the West Indies in about equal proportions. The principal shippers of Bridgewater are:—The Davison Lumber Company, Limited; Robert Dawson and Sons; Nathan Veinot, Ed. Zwicker and Sons, (New Germany); McClaren Company, Limited, (Liverpool); and F. W. Pickles (Annapolis).

The amount of lumber manufactured at and shipped from Liverpool, N.S., during 1912 reached the total of ten million feet of pine, spruce, hemlock and hardwood lumber, the bulk of this going to the United States, West Indian and South American markets. The advance of 25 per cent. in freight rates militated against fair profits.

Parrsboro reports shipments to the United Kingdom during 1912 to have fallen below those of former years, while shipments to the United States increased.

#### Nova Scotia Shipments of Lumber to England

Shipments of lumber from Nova Scotia ports to England during the year 1912 were as follows:—

|                                        | Sup. Ft.    |
|----------------------------------------|-------------|
| John E. Moore & Co., Ltd. ....         | 39,672,000  |
| W. Malcolm MacKay ....                 | 26,500,000  |
| George McKean ....                     | 22,400,000  |
| Colin C. Tyrer ....                    | 12,045,000  |
| I. H. Mathers & Son ....               | 4,200,000   |
| Frost & Smith ....                     | 4,000,000   |
| Primrose Bros. ....                    | 2,220,000   |
| Total shipments to United Kingdom .... | 111,037,000 |

#### Halifax Deal Shipments

Deal shipments from Halifax to the United Kingdom during 1912, were as follows:—

|                                | Squ. Ft.   |
|--------------------------------|------------|
| John E. Moore & Co., Ltd. .... | 21,651,000 |
| W. Malcolm MacKay ....         | 9,890,000  |
| Colin C. Tyrer ....            | 9,493,000  |
| George McKean ....             | 8,400,000  |
| I. H. Mathers & Son ....       | 4,100,000  |
| Frost & Smith ....             | 4,000,000  |
| Primrose Bros. ....            | 2,220,000  |
|                                | 59,754,000 |

#### Maritime Provinces Trade With the Argentine

The lumber trade in the Argentine Republic, according to a recent report of the Department of Trade and Commerce at Ottawa, has been slack for some time, owing in great part to the fact that the highly optimistic expectations of last year's harvest were not realized. However, viewing the splendid prospects for the coming season, there seems little reason to doubt that activity in this commodity will within a short time be in evidence. The trade is not by any means dead, but dealers have been reporting it as very dull for some few months.

The imports of lumber for the six months ending June 30 last were as below:—

|                         | Cubic Metres. |
|-------------------------|---------------|
| White pine ....         | 57,277        |
| Pitch pine ....         | 313,932       |
| Oak ....                | 1,109         |
| American hardwoods .... | 25,466        |
| Walnut (in sheets) .... | 241,456       |

## Parrsboro's Lumbering Operations

### An Off Year for Deal Shipments—Exports of Spruce and Hemlock to the United States Increased Greatly

For nearly three-quarters of a century lumbering has been one of the leading industries of Parrsboro, N.S., and, according to present indications, it will long continue to be an important factor in the business of the town. Among the early settlers the conditions were entirely different. Whatever foreign markets there were at that time were inaccessible, and the local demand was, naturally, very small. The pioneers regarded the trees of the forest as enemies to be exterminated rather than as friends to be prized and protected. The object of the first settlers was to prepare the land for cultivation, and, with that end in view, the removal of the trees was imperatively necessary. A small portion of the abundant timber was utilized in building log cabins and fences; a larger quantity was reserved for fuel, and the remainder was felled, as rapidly as other labors would permit, and burned on the ground where it grew. There is not the slightest doubt that the amount of timber destroyed in clearing the farms along the Parrsboro shore would be worth to-day much more than the present value of the cultivated farms with all their improvements. The first shipments from this port in the lumber line appear to have been what is known as "ton-timber"—hewn hardwood logs ranging in size (there were big trees in those days) from fourteen inches to three feet square. As a proof of the versatility of the early settlers it may be mentioned that some of the men of Parrsboro (then Mill Village) built small brigs, loaded them with ton timber, took command, sailed them to British ports and, in several cases, sold both vessel and cargo.

When a demand for spruce deals arose in Great Britain the owners of timber lands along the Parrsboro shore were quick to see the possibilities of the market and to take advantage of their sawmills with a single saw—now contemptuously spoken of as "Jackknife Mills"—were erected on every stream along the coast. Their output of deals, small in quantity, but of widths seldom seen nowadays, was shipped to St. John, N.B., in small schooners and then transferred to square-rigged vessels for shipment to the British markets. In 1849 fire swept the Parrsboro shore, destroying the growing timber and burning a number of the sawmills. This practically put a stop to lumbering for a time, for although large tracts of forest remained untouched in the inland sections, all the lands within easy reach of shipping had been burnt over, and where excellent timber was growing before the fire, nothing was to be seen for years but wide stretches of "ram-pikes" pointing their bare arms to the sky.

#### Parrsboro's Introduction to Modern Lumbering

Some years later a number of American lumbermen who had exhausted their home supply, came to Cumberland County and secured large timber limits which the fire had left untouched. They built large steam mills, introduced gang saws, rotaries, portable mills and other modern improvements, employed large gangs of choppers and mill men, made all the use they could of the lately-built railroads and, in short, conducted the lumbering business on business principles. The immediate result was a largely increased output of deals, and it soon became evident that a different method of shipping would have to be employed. Parrsboro was the most convenient shipping port for some of the American operators, and as they found it was too expensive to send cargoes to ships at St. John, they soon induced the ships at St. John and elsewhere to come to Parrsboro for their cargoes. The output of deals from Parrsboro reached its maximum about two decades ago, and as all deals were carried at that time in sailing ships, it was no rare thing to see from fifteen to twenty square rigged vessels—ships or barques—in Parrsboro Roads at once, taking in or waiting for cargoes. It was believed, or at least predicted, at that time, that the lumber trade of Parrsboro was nearly finished and that the end was in sight. The American operators cut off everything they thought worth taking, and then sold their mills and denuded timber limits to Nova Scotians, and left the country. Lumber continues to be shipped from Parrsboro, and it is probable that the value of the yearly output is as large now as it was twenty years ago.

#### Results of the Year's Operations

Last year, however, was an off year in deal shipments from this port. The shipments of deals and battens to the United Kingdom last season totalled only 17,578,550 feet, valued at \$233,621. This is a poor showing when compared with the shipments for 1911, which amounted to 29,662,217 feet, valued at \$408,215. This large falling off was due to several causes, chief of which were the sharp advance in freights and the scarcity of vessels. On the other hand, the exports of spruce and hemlock boards and scantling to the United States up to the 30th of November—the date when shipments usually close—aggregated 16,511,763 feet, valued at \$214,077. Since that date the exports have totalled very nearly two and one-half million feet, so

that the total exports of boards and scantlings to the United States approximate very closely nineteen million feet, which is far beyond any previous record. The exports for 1911 aggregated only 3,829,514 feet, while in 1910, which was a banner year, the figures were 6,360,201 feet. The number of laths exported up to November 30, was 10,618,300, valued at \$29,234. The number exported in 1911 was 12,613,600, valued at \$29,322. It will be seen that while the numbers for the two years differ nearly two millions, the valuations differ very little. When 230,000 laths exported in December are added, the valuation for last season exceeds that of the preceding year. The total output of sawn lumber last year was 38,513,973 feet, or fully two and one-half million feet more than the cut of 1911, while the valuation is over half a million dollars.

In piling the number of pieces exported last year was 38,663, and the valuation was \$55,367. Compared with the 62,165 pieces, valued at \$88,964, exported in 1911, this is a poor showing, but some people hold that the country would lose nothing if the piling trade should cease altogether.

The only direct shippers of lumber from Parrsboro to the United Kingdom last year were J. Newton Pugsley and Burpee L. Tucker, who, in addition to their own output, handled the cut of all the other local operators, and were also large exporters to the United States. Other exporters from Parrsboro were Newville Lumber Company, James W. Kirkpatrick, C. T. White, R. S. Carter, Springhill Lumber Company, H. Elderkin & Company, T. K. Bentley, I. Lorne Pugsley and W. H. Duffey.

The total output of Cumberland County last year is estimated at 65,000,000 feet, which does not include a large quantity of small logs used as pit timbers in the Springhill and Joggins mines. Cumberland lumbermen also operated quite extensively in other parts of the province, when their last year's cut was estimated at seventy million feet.

#### Nova Scotia's Output and Shipments

It is a difficult matter to get accurate information concerning the lumber output of the whole province, but Mr. J. B. Whitman, Chief Provincial Forester, who should be an authority on the subject, says he made "a fairly careful compilation of the quantity of lumber exported annually, and the result showed more than 600,000,000. A careful inquiry about the quantity used for domestic consumption shows that more than 100,000,000 was used for the various purposes of mining, building, manufacturing and for railway purposes." According to Mr. Whitman's compilation more than thirteen million feet of lumber is required annually for the manufacture of apple barrels alone, and the demand for apple barrels will certainly increase unless the apple growers find it advisable to ship their fruit in boxes.

Probably the largest operators in Nova Scotia are the Davison Lumber Company, which comprises a syndicate of wealthy Americans who bought the Davison property on the La Have River a few years ago. Their areas contain about 210,000 acres, and it is stated that half a million dollars has been spent on improvements by the new management. The company employs about eighteen hundred men and has the most up-to-date plant in Canada.

#### The Outlook for the Future

Fears are frequently expressed that the lumber supply of the province will soon be depleted, but the alarmists do not appear to realize the marvellous recuperative powers of our forests. Much valuable timber has been wasted by careless operators in years gone by, and large areas have been devastated by fire, but better systems have been adopted and more care is being taken. The substitution of the saw for the axe in felling and cutting up trees has already saved much lumber and will save many millions more. Young trees are now carefully protected where careless destruction was formerly the rule, and great pains are taken to prevent forest fires. The danger of depletion is thus greatly lessened, and the natural increment seems to be equal to the annual output. As an instance of the rapid recovery of forest growths it may be mentioned that an area of about 38,000 acres all chopped over twenty years ago, is now estimated by expert cruisers to be capable of producing fully one hundred millions of lumber. This property is situated on the Cobequid Bay, some twenty miles above Parrsboro, and will undoubtedly help to swell the output of this port in the years to come.

One of the most hopeful things about the lumber industry is that our people seem to appreciate more and more every year the inestimable value of our forests. The cost of marketing the forest products has largely increased—some say it has doubled—but the increase in the selling price has kept pace with the cost of production. Much of our forest wealth has been ignorantly destroyed; much has been carelessly wasted; but it has always been one of the richest portions of our heritage and, with reasonable conservation, will be a boon and a blessing to succeeding generations.

Elihu Woodworth

Mr. Robert Connelly, manager of the Pejeboscot Lumber Company, Martin Head, N.B., reports that the present is the worst season for the lumbermen in his experience. There was not a particle of snow

in the woods anywhere at the third week in January. The contractors for the company have got their cut of 8,000,000 feet practically all cut, but are hung up now for want of the necessary snow on which to haul the logs. He was in hopes that they would have a fall soon, as the situation was becoming more serious every day.

#### Boston Outlook for 1913 Trade

The following interesting despatch upon the Boston Lumber market was published in a recent issue of the *Fredericton Gleaner* of January 15th.

The weather is just now a topic of absorbing interest to all connected with the manufacture or sale of spruce lumber. There are producers in Maine, New Hampshire and New Brunswick ready to start their mills just so soon as the snow comes but who until then can do nothing. Their disappointment each morning when they wake up and find the ground bare is as keen as that of a child deprived of a picnic because of rain. For the manufacturers it is indeed a peculiarly trying situation and every fine or rainy day adds appreciably to their disgust. If the snow holds off three or four weeks more the effect on the market may prove to be very interesting. The majority of retailers are now pretty well through with stock-taking and know their wants accurately. As yet they are not inquiring much for lumber but that they will be compelled to do so before the end of February for their stocks are light, is quite a general and well-founded opinion. If when they begin to buy the production is no greater than at present, because of the want of snow, it seems not unreasonable to suppose that they may be confronted with even higher prices than those now ruling. It is questionable though if under any circumstances the yard orders will be as large this winter as they often have been in the past. Everyone believes that there will be quite as much lumber bought but it is deemed probable that it will be done in a different way. In other words it is thought that small orders will be more numerous, large not so plentiful.

#### Frames

There is very little being done in frames just at present but the price is quite as firm as a week ago. So far as can be learned no one is willing to concede a nickel from \$26 and it is certainly true that for difficult orders \$1 more is being asked.

#### Random

There is more or less random being sold every day, of course, quite enough to test the temper of the market, but it cannot truthfully be affirmed that the business being done is of sufficient importance to render the situation interesting. There is no change whatever in prices nor does the tenor of negotiations show that anyone is looking for an immediate advance or a very quick decline but as before noted much depends on the weather. Three or four more snowless weeks may make a wonderful difference in the whole aspect of affairs.

#### Boards

There is a rumor that one well known wholesale house has purchased a large lot of eastern hemlock boards, clipped, for future delivery at \$24 less five per cent. This may or may not be true but it is a fact that if anyone had a carload of dry boards to offer to-day that could be shipped at once he would probably ask for them as much as \$24, from which it will be correctly inferred that such stock is by no means easy to find. There is a scarcity at present that almost amounts to a famine. About spruce covering boards the feeling continues very firm. One sale is said to have been made within a few days to a buyer in urgent need at \$22.50, but this is certainly 50 cents more than most retailers will consent to pay. For matched spruce boards \$24 is still frequently asked. For Canadian boards indeed some sellers want even more.

#### Laths

There have been so many tales by reliable people the last few days of transactions in 1½ inch laths at \$4.40 that it is no longer possible to think that the narrators have been misinformed. As a stern matter of fact there are to-day two prices, \$4.40 and \$4.50. One ordinarily very accurate observer thinks, however, that within a day or two he has noticed that the feeling is becoming rather firmer. He thinks in fact that sales at \$4.50 are increasing, those at \$4.40 decreasing. For 1½ inch laths the demand here is slack. There is some talk of business at \$3.90 but it is of the vague indefinite order. It is hard to find any responsible person who will vouch for its accuracy. There are many people, no doubt, who for good plump 1½ inch slab laths will not take under \$4.10.

#### Shingles

That there continue to be firms that will not concede from \$4.25 for extras there is no doubt, but it is also true that there are others selling really good brands at \$4.15. They have become tired of waiting for orders that won't come at the higher price. The red cedars are being offered at \$3.75 and \$3.80.

The prices following are those at which retailers can buy of the

wholesale trade. They refer to lumber 8 to 20 feet in length. For every two feet or fraction of two feet over 20 feet \$1 is supposed to be added. The rule is not, however, always adhered to in sales of random.

### Spruce Lumber

Railroad shipments: Frames, 8-inch and under, \$26; do. 9-inch, \$27; do. 10-inch, \$28; do. 11 or 12-inch, \$29; random, 2 x 4, \$22 to \$23.50; do. 2 x 3, 2 x 5, 2 x 6, 2 x 7, \$21.00 to \$21.50; do. 2 x 8, \$23.00 to \$23.50; do. 2 x 10, \$24.50 to \$25; do. 2 x 12, \$25 to \$25.50; spruce covering boards 5-inch and up, \$21.50 to \$22; matched spruce boards, \$23.50 to \$24; hemlock boards, 12, 14, 16 feet, \$23.50 to \$24; bundled furring, clipped to lengths, \$21.50 to \$22.

### Shingles, Laths, Clapboards

Shingles: Extras, \$4.15 to \$4.25; clears, \$3.90 to \$4.  
Laths, spruce: 1½ inch, \$4.40 to \$4.50; 1½ inch, \$4 to \$4.10.  
Clapboards: Spruce, 4 feet extras, \$50 to \$52; clears, \$48 to \$50.

### New Brunswick Stumpage Receipts

The following shows the quantities and kinds of lumber cut from Crown lands in New Brunswick, for which stumpage bills were rendered during the year ended 31st October, 1912, with the amount charged thereon.

| Kinds of Lumber                           | Quantity    | Stumpage     |
|-------------------------------------------|-------------|--------------|
| Spruce and pine logs . . . . .            | 190,163,601 | 250,854.56   |
| Fir logs . . . . .                        | 59,783,902  | 47,827.12    |
| Cedar logs . . . . .                      | 17,919,701  | 22,399.62    |
| Hardwood logs . . . . .                   | 5,199,114   | 4,159.29     |
| Hemlock logs . . . . .                    | 6,259,437   | 2,503.77     |
| Hemlock logs, peeled . . . . .            | 2,993,646   |              |
| Poplar logs . . . . .                     | 573,740     | 458.99       |
|                                           | 282,893,141 |              |
| Hardwood Timber, tons . . . . .           | 240 29/40   | 226.09       |
| Wood (fire and pulp) cords . . . . .      | 610         | 258.16       |
| Hemlock Bark, cords . . . . .             | 535½        | 428.40       |
| Sleepers, pieces . . . . .                | 381,589     | 9,539.72     |
| Posts, pieces . . . . .                   | 6,250       | 93.75        |
| Telegraph Posts . . . . .                 | 2,418       | 551.05       |
| Boom Poles . . . . .                      | 4,623       | 92.46        |
| Brackets . . . . .                        | 2,532       | 25.32        |
| Barrel Wood, cars . . . . .               | 11          | 102.88       |
|                                           |             | \$339,521.18 |
| Add old accounts . . . . .                | 5,871.63    |              |
| Less allowances and overcharges . . . . . | 2,382.83    | 3,488.80     |
|                                           |             | \$343,009.98 |
| Deduct unpaid accounts . . . . .          |             | 3,405.80     |
| Paid Receiver General . . . . .           |             | \$339,604.18 |

### A Prominent Operator's View of Trade Conditions

Frederick B. Cutler, of Stetson & Cutler, Boston, Mass., reviewing lumber trade conditions says:—

"Prices of lumber of all kinds advanced during 1912 to a fair level, not to a high level as many retailers think. It is quite interesting to read the following quotations given a large retail yard in Boston some years since:—

|                                            |         |
|--------------------------------------------|---------|
| Frames, 12 inch . . . . .                  | \$14.50 |
| Frames, 10 inch . . . . .                  | 13.50   |
| Frames, under 10 inch . . . . .            | 13.00   |
| 69 M 2 x 4 Random . . . . .                | 11.50   |
| Furring . . . . .                          | 11.00   |
| 2 M Hemlock, P 1 S . . . . .               | 12.50   |
| 10 inch spruce boards, P 1 S & M . . . . . | 13.50   |
| Stock hemlock boards . . . . .             | 12.00   |
| Clear shingles . . . . .                   | 2.35    |
| No. 2 barn boards . . . . .                | 18.00   |

"All the above prices were for the lumber delivered Boston rate of freight. The retailer on comparing them with those ruling to-day will at once think that the manufacturers' profits have increased enormously, but this is not the case. The reasons for the difference are the higher labor scale, increased freight rates and the heavier cost of food supplies. When we first went into woods operations we were paying \$16 to \$18 per month for our best men who were first class workmen, i.e., men who could and did give a large amount of work each day. We are now paying \$32 to \$35 and get about as wretched a crowd of men as it is possible to imagine. Please note that we are now paying nearly double in wages and get for a day's labor about half as much work as formerly. The difference in the price of food products is also very marked. To-day we supply better food and greater variety than formerly, all of which means, of course, much heavier expense. Formerly we had a scale that gave 20 to 30 per cent. overrun in sawn lumber, now our scale runs 10 to 20 per cent. fall short.

"This means an enormous increase in cost. The stumpage has nearly trebled in cost. Where \$2 per M. was a fair price, it is now \$6 to \$8. The freight rates, especially by vessel, are much enhanced. The rates by water the past season were higher than I ever remember to have seen them. All I have said applies to spruce and as spruce,

because of the enormous increase in the consumption by pulp mills, is growing scarcer very rapidly, I look for enhanced values in the future. It is becoming harder and harder to stock saw mills, with the result that they are gradually dropping out of business, which means, of course, that the product is decreasing while the consumption is increasing. I am looking for higher prices in 1913 than prevailed in 1912.

"The only way in which consumers can get relief is by removal of the duties on lumber, laths, shingles, etc. Owing to the very firm conditions in the foreign markets to-day this removal would not help very much just at present. There is a much mistaken idea that the manufacturers of lumber in the provinces pay less for their labor than we do in the United States. This is absolutely not so. I am interested in some large mills in Maine, also in some in various parts of the provinces. I have compared the pay rolls often and find that I actually pay more wages at our provincial mills than at our American mills. The year 1913 looks like a banner year for consumption, the only black cloud being politics, but the country is so wealthy because of the splendid crops that even that bugbear can't hurt much."

### New England Trade Responding to Better Prices

Boston, Mass., January 16th, 1913

Editor Canada Lumberman:—

The lumber business in the New England States, and in Boston, during the past year has been fairly satisfactory to the lumber trade in general. There has been, on most articles, a gradual rise in price—not any very marked advances at any one time, but an under-current making steadily for higher prices. Although there was fear on the part of most of the lumbermen that, being a presidential year, business would naturally be rather poor, still we think, on the whole, that has not been the case and the volume of business has been above the average. We know of one wholesale dealer in Boston who says that December of the past year was the best month he ever had in volume as well as in profits. We think others, as a rule, have found the year quite satisfactory.

The feeling seems to have been during the year 1912 that, although there was to be a change, in all probability, in our government in Washington, nevertheless there would be no radical legislation that would badly upset business. The effects of the large drops which necessarily brought a great deal of money into the country, was to stimulate trade and more than offset any bad effects caused by the pending election, or by the election after the result was generally known.

The tendency has been for manufacturers in most parts of the country to advance their prices pretty sharply during the last two or three months, and we hear of a good many sales made at considerably higher prices than those of last year.

The New England trade, of course, is not a manufacturing trade in lumber to any great extent, but more a consuming and a wholesale trade, and we think it has responded with fair quickness to the conditions at the manufacturing centers, and that prices are ruling higher now than they were a year ago in all sections.

As to what the outcome will be for the coming spring and summer, there seems to be quite a little difference of opinion. Owing to continued agitation by the government authorities at Washington, and because they are inquiring into many business combinations, we think the stock market has been driven down to very low figures, and as the stock market is apt to reflect the views of the financial world as regards the near future in general business, it certainly does not appear that this portion of the public anticipates a very good business for the coming year.

On the other hand, lumber is generally one of the last things to feel a recession in general business, and it may be that during the next six or eight months, at least, the lumber business will hold up well. At all events, the people who buy from the manufacturers at advanced prices cannot afford to sell at any reductions, and will probably have to advance their prices still further in this section. We are feeling we must make some advances in the near future, but whether the market will respond well it is rather difficult to say. All things considered, we look for a fairly prosperous year in 1913, but we believe caution should be exercised in making purchases of lumber that is not wanted for immediate use, and that those who pay much more for stock than they did in 1912 run some risk of making a loss in 1913 business in this section.

Yours truly,  
Shepard & Morse Lumber Co.,  
H. B. Shepard, President.

Mr. J. F. Garrity, of the Garrity Lumber Company, Boston, Mass., visited St. John, N.B., recently on a lumber buying trip. He expected to place orders for about 12,000,000 feet of lumber with New Brunswick mills. Mr. Garrity stated that the demand for Canadian lumber across the border was strong.

# Montreal Trade Had an Excellent Year

**Marked Revival in Business Brought About Expansion in Demand and Higher Prices—Drawbacks were Offset—1913 Outlook Promising**

Montreal, January 20th, 1913: It is never safe to prophecy unless you know, but the prophets who predicted a good year in 1912 for the Montreal lumber trade were, for once, on the right side. Manufacturers, wholesalers, and retailers did an excellent business—probably the largest ever transacted, and this too at advancing prices. Both national and local conditions were responsible for this revival in trade. With the growth of population and the expansion of commerce, building went ahead at a rapid rate. Many of the old buildings in the down-town section in particular were torn down to make room for ten-storey structures, and in the suburbs hundreds of houses were put up to meet the ever-increasing demand. This, of course, stimulated the purely local demand, but outside of this there were enormous orders to wholesalers, both for shipment to the United States and to Canadian points. Stocks of dry lumber were practically exhausted, and towards the end of the season it was impossible to secure certain lines. As in the previous year, there was an enlarged enquiry for the common ends. Contractors found it almost impossible to pay the price demanded for the better grades, and hence the run on the common sorts, with the result that quotations in this class of goods were put up.

Retailers state that they had an exceptionally good year, and that the greater business was not confined to builders, who are the chief buyers of the common grades. The improvement was general, and though some complained that money was difficult to collect, inquiries indicate that there is a belief that conditions were and are sound.

## Wholesale Business Expanding

With regard to the wholesale trade, the year started with the Southern manufacturers short in their output owing to floods and lack of labour. Under such conditions competition to secure business in Canada was not so keen as in previous years, the Canadian manufacturers not feeling the pressure from this source. In Eastern Canada the cut made in 1912 was about normal. Although the Ottawa Valley output was larger than in the previous year, that in Georgian Bay counterbalanced it, as it was less on account of four or five mills being burned out. As business in Canada and the United States improved steadily during 1909, 1910 and 1911, there was not a large quantity of lumber carried over during the winter of 1911-12. With the extensive additions to building throughout Canada, and a normal increase in building in the United States, the request for building lumber opened well in the spring and gained during the summer. In the fall, there developed a great scarcity of dry stock especially in the common ends, such as hemlock, spruce, Norway pine, and the lower grades of white pine. Naturally, prices increased. There was also a strong demand for packing cases of all kinds, which gave an impetus to the box lumber section. Railroad orders for car lumber were an important factor in the advance in quotations, a condition which is likely to continue during 1913. Spruce met with a very ready sale, while basswood and lath were bought freely at good prices.

The hardwood trade was brisk, with one rather curious feature. Owing to the enormous number of plain oak doors used, there was strong buying of oak trim, so that this practically displaced chestnut. Prices of oak stiffened, and the lumber became very scarce. Hardwoods in general were imported in larger quantities, and the outlook for the current year is very satisfactory.

## Car Shortage and Demurrage Charges

Throughout the year lumbermen were handicapped by the serious shortage in cars, the want of locomotive power, and the inability of the railway companies to deal with the increasing trade, which grew too fast for the transportation facilities. Promises to amend conditions were repeatedly made, but really little was done, and the mills found themselves unable to fill the orders which poured in upon them. Congestion of traffic at the terminals followed, and the railway companies, in order to obtain relief, put embargoes on cars from certain points. Some wholesalers are still feeling the effect of this disorganization, and orders given several months ago are yet unexecuted. Arising out of this condition, the companies asked the Railway Commission to advance the demurrage rates, and to the surprise and disgust of the lumberman, the Commissioners allowed the rates to be temporarily raised from one dollar per day to two dollars for the first 24 hours and three dollars for each subsequent twenty-four hours. This has already caused serious expense to lumbermen, and those who were in the habit of using the cars as a means of storing lumber find themselves compelled to pile it in their yards, and release the cars. This is, of course, what the railway companies were aiming at, but the

lumbermen who do not detain the cars beyond a reasonable time, object to being penalized for the sake of a very few offenders. The Montreal Board of Trade have decided to press for reciprocal demurrage on the ground that consignees have an equitable claim to demurrage in the case of delays by the railway companies.

## Exports to Europe Better

A notable recovery was made in the export trade from Montreal last year. In 1911 shipments declined by 12,882,176 feet, owing largely to the placing of enormous quantities of Baltic pine on to the British market, thus competing with our red pine. It will be seen from the following statement of exports from Montreal that the increase for last year was 5,897,544 feet, this being mainly in white and red pine.

| Name of shippers                             | 1912        | 1911        |
|----------------------------------------------|-------------|-------------|
|                                              | Ft. B.M.    | Ft. B.M.    |
| Watson & Todd, Limited                       | 33,217,881  | 13,663,444  |
| Robt. Cox & Co.                              | 17,316,113  | 13,296,102  |
| W. & J. Sharples                             | 12,943,460  | 10,222,326  |

## Destination of Cargoes

|                             | Ft. B.M.    |
|-----------------------------|-------------|
| South Africa                | 2,637,407   |
| Australia                   | 129,381     |
| Great Britain and Continent | 106,603,976 |
|                             | 109,370,764 |

Throughout the season the purchases for Great Britain and the Continent were good, at higher prices, this being due partly to sympathy with the strong market on this side. In red pine, competition from Russia was again very active, but as general trade was exceptionally brisk the effect was not so much felt as in previous years. Shipbuilding, in which a large amount of pine is used, was very active, and this considerably helped the market. Both birch and spruce were in fair request; in the former case prices showed a rising tendency almost throughout the season.

The chief drawbacks to the export trade were a dock strike in London, which upset the shipping arrangements of exporters, and the very unsatisfactory car service. Shipping freights were higher, which was only natural in view of the enormous demand for tonnage throughout the world. A new fortnightly service between Montreal and Hull was inaugurated. Previous to last year occasional boats were put on, but business between Montreal and the East coast of England increased so much that a semi-monthly service was started, and the cargo offering was very large.

The present outlook is distinctly promising. Reports from Europe point to a continuance of the commercial expansion, and although the expenses of freight, handling cargo, etc., are certain to go up, the prices of lumber are almost sure to respond.

Exporters still complain of the limited accommodation at the Montreal docks. The work is at all times of an arduous character, but it is made worse by the small amount of room at the disposal of shippers. Perhaps, now that new Harbour Commissioners have been appointed, more consideration will be paid to this part of the port's business. Another point which has been urged upon the Federal Government is the appointment of an official to check the weights of the lumber as it arrives. This official should not only, it is urged, be appointed at the Montreal docks but at other places where cars of lumber are weighed by the railway companies, the charges, of course, being based on these weights. Sometimes the weights are, it is asserted, merely guessed at, and in many cases are inaccurate.

## Pulp, Paper, and Prices

The event of the year in the pulp and paper section was the abolition by the Gouin Government, of the restrictions on the Crown lands of the Laurentide, Belgo-Canadian, Wayagamack, and Price Companies. This was in response to representations that the removal of the restriction on exporting wood from the Crown lands would mean a big stimulus to the pulp and paper industries, as it would enable these commodities to be sent duty free into the United States; the latter country, in view of the raising of the restriction, removing the duties

hitherto levied on pulp and paper made from wood from these Crown limits. Following this decision by the Quebec Government, the question has been raised whether other holders of Crown limits are not entitled to similar concessions, which, if given, would totally reverse the policy of the Government. Why should exceptions, it is asked, be made in favour of powerful companies who are able to bring strong pressure on the Government, and why should the smaller holders be discriminated against? Some of those who are outside these companies and hold free lands also fear that doing away with the restriction will result in a lowering of prices for the pulp wood that they now sell to the United States. These holders argue that the removal of the duty will permit pulp to be sold cheaper, as the duty will no longer have to be paid on Crown wood pulp manufactured by these companies, if they desire to export it, and that this in turn will affect the price hitherto paid for wood from free lands. Against this it may be said that there is an increasing demand for both spruce and pulp, and that this factor will be all powerful in keeping up values. United States mills are perforce bound to come to Quebec for their supplies, and under such circumstances prices are more likely to rise than to fall.

The mechanical pulp market was by no means satisfactory during the year, and shipments to the United States fell off owing to the good water conditions in that country, which, enabling United States mills to manufacture their own pulp to a larger extent than usual, thus relieving paper manufacturers from the necessity of coming to Canada for supplies. Production too, in Canada was on a larger scale, and although the output of paper was considerably greater, it was not sufficient to offset the smaller exports of ground wood to the United States and to absorb the extra production. Several new mills are projected, and some will start manufacturing early this year, so that the outlook does not seem favourable to a rise in values. The failure of the East Canada Pulp and Paper Company, of Murray Bay, is an indication that the pulp industry is not invariably a field for successful exploitation and that the glowing prospects held out by promoters are not always realized. Mr. W. Whyte, the manager of this concern, has been appointed superintendent of the new 100-ton ground wood mill of the Abitibi Pulp & Paper Company, at Iroquois Falls, Ont.

Sulphite was a strong market throughout the year, and prices advanced about \$6 per ton. This was due to an increased demand, and although there were heavier imports from Canada and Europe into the United States, the buying orders were not all filled.

#### The Outlook for 1913

What are the prospects for the lumber industry generally in the Montreal district? Inquiries among wholesalers and retailers go to show that they are of the brightest. The extensive building programme and the promised continuance of the trade activity are favourable to another satisfactory twelve months' business. There has been much real estate and building speculation, and present indications point to the maintenance of a high level of prices, for land and buildings.

Tariff legislation in the United States is likely to be beneficial to Canadian lumber interests, and the proposed removal of the duty would enhance the value of timber limits. Stocks of lumber are low, and it may be taken for granted that manufacturers will take advantage of the greater all round demand and advance quotations. This means dearer lumber for the consumer, although if pushed too far it will tend to restrict purchases. Taken all round, the outlook is good, and 1913 will probably be the most prosperous year in the lumber trade since 1906.

#### Check Mate for Quebec Crown Land Pulpwoods

The United States Treasury Department has put a temporary check upon the Quebec owners of Crown Land pulpwood, who expected to send their pulp and paper into the United States free of duty, now that the prohibition of export of the pulpwood has been removed. What the final result will be is uncertain, but for the present, this class of pulp and paper will continue to pay duty. The Treasury Department of the United States, has issued the following order:—

"Treasury Department, January 18th, 1913.

"To collectors of customs and others concerned:

"The department is informed that certain manufacturers of paper in the Province of Quebec are claiming the right, by virtue of an order-in-council dated December 31st, 1912, to state in their declarations upon invoices that the wood from which the merchandise was manufactured, though cut on Crown lands, is free from all restrictions of manufacture, exportation, etc.

"Pending further instructions, collectors are hereby instructed to continue to collect duty on all importations of pulp, paper, or paper board manufactured from wood cut on Crown lands in the Province of Quebec, notwithstanding statements in such declarations relating to the freedom of the wood cut in such lands from restrictions as to manufacture, exportation, etc.

"(Signed) Franklin MacVeagh,

"Secretary."

#### Montreal Bank's Report on Lumber Trade

The annual report of the president of the Bank of Montreal, which has 160 branches at various points throughout Canada, refers to the lumber and pulp wood industry as follows:—"Lumber and pulp wood have had a good year, last winter's cut being large and prices high. The increase in British prices, however, has been fully offset by material advances in ocean freights, with the result that the United States has been our best market. British Columbia finds its lumber operations, after languishing for some years, becoming suddenly revived owing to the improved demand from the prairies and to the better conditions of commercial affairs among our neighbors, who instead of being keen competitors, have become good customers for our products. The lumber business on the Atlantic, as on the Pacific side, shows much improvement apart from the pulp and paper industry, which is specially adapted to this country and has been very prosperous for some time, but owing to the number of new concerns in operation there is a tendency to overproduction with slackening demand and lower prices."

#### Quebec Timber Measurements for 1912

The following statement shows the quantity of timber measured through the office of the Supervisor of Cullers, at Quebec, during the year 1912:

| Descriptions of timber      | Pieces | Cubic feet |
|-----------------------------|--------|------------|
| Waney white pine . . . . .  | 21,018 | 1,172,720  |
| Square white pine . . . . . | 57     | 1,760      |
| Square red pine . . . . .   | 397    | 12,200     |
| Square oak . . . . .        | 1,961  | 113,840    |
| Square elm . . . . .        | 7,431  | 313,640    |
| Square hickory . . . . .    | 4      | 160        |
| Waney ash . . . . .         | 21     | 520        |
| Waney birch . . . . .       | 2,231  | 42,920     |
| Waney walnut . . . . .      | 74     | 1,320      |
| Waney silkwood . . . . .    | 2      | 40         |
| Total . . . . .             | 33,196 | 1,659,120  |

#### Price Brothers' Progress

Within two months the new paper mills of Price Brothers, at Kenogami, P.Q., will be running at their full capacity of 150 tons of newsprint per day. The sulphite plant has just been started, and is now in full running order. Mr. O. A. Porritt, manager of Price Brothers' pulp and paper enterprises, states that about five hundred men are employed at the new plant and this number will be doubled when the plant gets to its full capacity. Including the Jonquiere Pulp Company's plant, 26,000 horse-power is now being generated on the Au Sable River but to insure an adequate power supply at all times, a supplementary power is being developed on the Shipsaw River, at the junction with the Saguenay, about a mile above the Kenogami plant. This will furnish 7,000 horse-power at first, and the company have still another power at Chicoutimi, undeveloped. The annual report of Price Brothers & Company, Limited, Quebec, P.Q., for the year ending November 30th has been issued, and shows profits amounting to \$463,716, against \$393,964 a year ago, an increase of over 71 per cent.

#### U. S. Lumber Duty Situation

One of the most interesting and important situations that developed in connection with the lumbering industry in Canada and the United States during the year 1912 was the direct result of the election of the Democratic party in the United States last autumn. This party has definitely pledged to reduce the marked-tariff upon all necessities and to obtain the country's revenue as far as possible from tariffs or taxation upon luxuries. In conformity with this policy they have already commenced work upon a far-reaching inquiry on duties upon all marked articles. One of the first questions to be taken up was that of the duty upon lumber, and unquestionably all the features of the investigation up to date indicate strongly that duty upon lumber, rough or dressed, timber hewn and square, shingles, laths and fence posts will be placed upon the free list. There is a long road to travel before this will be definitely the law of the land, but it seems to be taken for granted to-day that the result is certain.

The House Committee on Ways and Means at Washington devoted a recent session to the receiving of evidence upon the duty upon these products. The attitude of this committee is forcibly indicated by a recent statement made by Mr. F. B. Harrison, of New York, in the business. Mr. Underwood presides over the committee's deliberation. Being asked what he thought the effect of the revision of the tariff on lumber would be, Mr. Harrison said:—

"I feel confident that rough lumber will be placed on the free list. I say so because it is the policy of our party and a number of the Republican representatives will no doubt support it.

"The aim of the Democrats in revising the tariff will be to cut the rates so far as is possible on necessities, but to leave taxation on luxuries as it stands. We do not anticipate any difficulty on raising sufficient revenue."

# Imports into United Kingdom Increased

London and Liverpool Took Greater Quantities of Lumber, Timber, Etc. From Canada—Satisfactory Trade at Glasgow—Statistics From Important U. K. Ports

Farnworth & Jardine in their Annual Timber Circular report upon the lumber trade of the Mersey ports during the year 1912, as follows:—

The lumber trade of the past year exceeded in volume that of 1911, and is the largest since 1907. The season opened with light stocks, and a firm market, but the lock-out in the cotton trade in force, and rumoured further labour troubles, which, unhappily, proved true as regards the coal strike, caused much apprehension. As the season advanced, however, more confidence was established, and with improved trade generally, the business became fairly active, and values advanced all round. As imports were not excessive and fairly distributed, the consumption about kept pace, and stocks throughout remained moderate, the season ending with rather a short supply of some of the leading articles. Freight advanced in an extraordinary manner, reaching extreme rates—in some instances fully 75 per cent. advance on the previous season—even so, tonnage was scarce, and most difficult to obtain during the autumn months. Values, however, also advanced strongly, and, on the whole, it has not been an unprofitable season for the Importers.

Quebec Yellow Pine Timber.—The import to Liverpool has been the smallest on record, and considerably less than the light import of 1911, but the arrivals at Manchester have been on a liberal scale, and far in excess of recent years. There has been a steady demand throughout the season at satisfactory prices, and the stocks on hand are not excessive; values have ruled high. Wane, Pine, 1st class.—The arrivals were again largely to Manchester, and being chiefly on contract, went for the most part direct into consumption, and the stock which is returned at that port largely consists of timber waiting despatch; values are high. Second-class has been in fair request; values have been steady; the stock of this quality is quite sufficient. Square pine.—The import has been nominal, and the stock, although small, is apparently sufficient; values are firm. Red pine is seldom enquired for, and only in retail quantities. Oak.—Logs.—The demand has been largely restricted to special specifications suitable for railway requirements; the import amounted to about 140,000 cubic feet, compared with about 80,000 cubic feet the previous year, and all imported to Manchester, the bulk going direct into consumption; the stock, viz., 30,000 cubic feet, is light; values have improved, and are steady. Second-class oak.—A few consignments realised full prices. Elm.—(Square rock).—The supplies of this timber were again very limited; the demand has been good, and the stock is low; prices rule high. For round rock elm there is a fair demand, and values have been steady. Ash.—(Square hewn) is seldom asked for, but in the round log (unbarked) an active business is carried on from United States ports. Quebec birch was imported more freely than during the previous season, viz., 242,000 cubic feet, as against 227,000 cubic feet in 1911. The season commenced with moderate stocks; there has been a steady demand at improving prices; stocks are low. Planks and boards have been in fair request, and values well maintained throughout the season. Maple.—For round logs, sound, fresh, and of large dimensions, suitable for rollers, there has been a limited demand. Maple flooring, planed, etc., has been in fair request, and imported moderately; values well maintained. Sycamore, chestnut, etc., arrived in small quantities; the demand is nominal.

Quebec pine deals.—The arrivals of pine deals, sidings, boards, red pine, etc., have been slightly in excess of the figures for 1911. Pine deals.—There has been a good demand throughout the season, and values have an upward tendency, the higher grades commanding extreme rates; the stock of these is light; consumption has been good, and stocks are moderate. Third and fourth quality pine deals have been in demand, and good sidings have also met with favour. Red pine deals and boards were again imported on a moderate scale;

consumption has about kept pace, and values have not fluctuated to any material extent. Spruce deals.—The arrivals amounted to about 11,000 stds., which consisted chiefly of unsorted quality on contract; deliveries were satisfactory; stocks are moderate; values have advanced considerably.

New Brunswick and Nova Scotia, etc., timber.—St. John and other ports pine have practically ceased to be imported, the only arrival during 1912 having been 2,500 cubic feet from St. John, which has gone into consumption. Birch.—Logs, chiefly from St. John, N.B., and Halifax, N.S., have been imported to the extent of 140,000 cubic feet, against 129,000 cubic feet last season. There has been a good demand at satisfactory rates, and a light stock remains on hand. Birch planks have been imported on a much heavier scale than in the previous year; values declined in the early part of the season, but have latterly improved considerably; deliveries have been satisfactory, and stocks at the moment are not excessive. Birch squares.—The demand is limited.

Spruce and pine deals, etc.—N.B. and N.S. spruce deals. The imports to the Mersey and the Manchester Canal during the past year have been practically on all fours with the figures of the previous year, viz., 84,350 stds., compared with 84,850 stds. in 1911. The Manchester proportion was about 57 per cent., Liverpool, Birkenhead, and Garston about 43 per cent. The season opened with moderate stocks, and the market ran a steady course until the summer, when, owing to a phenomenal advance in ocean freight rates, imports were curtailed, and values advanced to higher points than have been reached for a great many years; the present stock is very light, and values high. Riga white deals of the cheaper qualities have again been supplied freely, and have operated in strong competition with spruce deals for making packing cases, etc. Hemlock deals have been imported in fair quantities, and have been in good demand, prices at the end of the season being high. Pine deals have been in better demand; shipments of the better class in good condition met with considerable favour, but the lower grades are not suitable for this market.

## Glasgow Imports From Canada

Messrs. Edmiston & Mitchells, Glasgow, in their Yearly Timber Circular refer to imports from Canada as follows:—

Yellow Pine Logs.—It was anticipated that the boom in shipbuilding would create a considerable demand for yellow pine deckwood, and that this did not eventuate can only be attributed to the price having reached prohibitive limits, thereby necessitating the introduction of substitutes, which have been found in teak, pitch pine, and Oregon pine. The consumption, amounting to 1704 loads, was equivalent to less than half the import, and there remains the heavy stock of 3007 loads on hand.

Elm Logs.—Imports were on a much heavier scale than in either of the two preceding years, but even so proved quite inadequate to meet the market's requirements, which were of an extensive nature, and there is now no stock in first hands. First-class rock elm of large square was in active request for shipbuilding purposes, and shipments of this description commanded high prices. Values otherwise were very firm.

Oak Logs.—The local railway companies came into the market to a satisfactory extent during the year, and the supply of first-class wood was quickly absorbed. Second-class wood also met with fair request in the latter months, and there is now no stock of either equality in first hands. Values have presented a very firm attitude.

Birch Logs (Quebec).—While the arrivals were unusually heavy, the demand was likewise exceptional and proved capable of absorbing all that came

## CANADIAN SPRUCE.

Diagram showing estimated duration of supply in comparison with averages of the same, at the same time in previous years—Foy Morgan & Co., London

forward, a fact which alone prevented a collapse in values, which, as a matter of fact, were fairly well maintained. Planks, on the other hand, were scarce and in request, and good prices were obtained for any consignments arriving. Low port logs.—A fairly heavy import occurred, but all went into consumption at firm values. Planks arrived sparingly, the few lots which came forward meeting with prompt disposal at full prices.

Deals, etc.—Pine goods generally met with poor request during the greater part of the year, although in the closing months there was quite a spurt in the demand for the lower qualities, and values appreciated to some extent. First quality deals and sidings were a disappointing market, being extremely slow of sale. Spruce was a scarce commodity, and the few consigned parcels which came to hand were disposed of at high prices.

Lower Port Pine and Spruce.—While there was a large import, it should be explained that the greater portion formed contract deliveries to one source. Consignments of spruce were far from numerous or adequate, and the market was obliged to fall back on Riga deals to cover requirements. There was a large direct import from Riga of nearly 14,000 standards.

### Improvement in London Pine Deal Imports

Messrs. Churchill and Sim, London, Eng., in their annual wood circular, refer to London's trade in Canadian woods as follows:—

The importation of Pine deals into London shows some improvement upon the meagre figures of 1911. The general body of merchants, discouraged by many experiences of losses owing to over supply in former seasons, have, to a great extent, withdrawn from a trade now much reduced in bulk, leaving it in comparatively few hands. Much patience in waiting for the demand, and considerable capital to hold such luxuries as Pine deals, are essentials to successful trading. The demand during the year has been fitful and uncertain at times, but in spite of much interruption from labour troubles, the aggregate consumption shows some improvement. The quantity of Spruce imported from the St. Lawrence is nearly the smallest recorded in the annals of the trade. There are several reasons to account for this, the principal being the insistent demands from the United States, and the resulting high prices which this competition produced. The Canadian people, when appealed to upon the single issue of commercial reciprocity with their neighbours rejected the proposal with no uncertain voice, fearing a weakening in the ties which bound them to the British Empire, and realising the magnitude of their business connection with the mother country. The passing of the Reciprocity Act would soon have made supplies of pine and spruce from Canada to this side a matter of purely historical interest, and in spite of the duty, which the democratic party now in power in the United States may decide to reduce or remove in the near future, a smaller proportion of Canadian Spruce is available for this country year by year, and that at a price which hardly competes with the White-wood of similar quality, obtainable in such large supply from White Sea and St. Petersburg sources. The quantity of Spruce deals arriving from New Brunswick was smaller than usual, and this branch of the Canadian trade may be said to be almost purely competitive, depending so greatly upon the conditions governing Riga and the cheaper Russian White-wood markets. In a year when tonnage rates have had a greater effect than ever before upon the prices of wood from all countries, Spruce has been handicapped somewhat in comparison with supplies coming from ports nearer home. The demand for Birch planks shows a welcome improvement, and retail prices in London have responded well to the higher range of value which the high freights have been so largely responsible for creating.

### London Imports of Canadian Woods

Imports of Canadian wood into London during 1912 and recent years were as follows:—

| St. Lawrence—              | Pieces. | Pieces. | Pieces. | Pieces. | Pieces. |
|----------------------------|---------|---------|---------|---------|---------|
|                            | 1908.   | 1909.   | 1910.   | 1911.   | 1912.   |
| Spruce deals, etc. . . . . | 434,000 | 459,000 | 635,000 | 436,000 | 490,000 |
| Birch deals, etc. . . . .  | 198,000 | 266,000 | 326,000 | 249,000 | 400,000 |
|                            | 1908.   | 1909.   | 1910.   | 1911.   | 1912.   |

| Timber.                           | Loads.  | Loads.  | Loads.  | Loads.  | Loads.  |
|-----------------------------------|---------|---------|---------|---------|---------|
| Yellow pine from Quebec . . . . . | 74      | 118     | 2       | 27      | 154     |
| Red pine from Quebec . . . . .    | 1,162   | 1,397   | 1,611   | 1,718   | 1,059   |
| Elm from Quebec . . . . .         | 210     | 151     | 10      | 16      | 69      |
| Ash from Quebec . . . . .         | 899     | 1,524   | 1,215   | 1,619   | 1,246   |
| Oak from Quebec . . . . .         | 310     | 487     | 328     | 138     | 225     |
| Birch from Quebec . . . . .       | 208,000 | 243,000 | 283,000 | 320,000 | 342,000 |

| Birch deals, etc. . . . .         | 815,000 | 857,000 | 969,000 | 970,000 | 804,000 |
| New Brunswick, etc.—              |         |         |         |         |         |
| Pine deals, etc. . . . .          |         |         |         |         |         |
| Spruce deals, etc. . . . .        |         |         |         |         |         |

### Stocks at Manchester and Liverpool\*

Stocks of spruce, birch logs and birch planks in Manchester and Liverpool, combined, at the close of the year 1912, with comparisons for previous years, are reported by H. W. Lightburne & Company, Liverpool, England, as follows:—

|                          | 1908.  | 1909.  | 1910.  | 1911.  | 1912.  |
|--------------------------|--------|--------|--------|--------|--------|
| Spruce Standards—        |        |        |        |        |        |
| Manchester . . . . .     | 16,220 | 12,680 | 13,220 | 12,870 | 7,620  |
| Liverpool . . . . .      | 7,760  | 5,800  | 7,930  | 5,570  | 3,750  |
|                          | 23,980 | 18,480 | 21,150 | 18,440 | 11,370 |
| Birch Logs, Loads—       |        |        |        |        |        |
| Manchester . . . . .     | 120    | 150    | 100    | 160    | 460    |
| Liverpool . . . . .      | 380    | 520    | 20     | 380    | 860    |
|                          | 500    | 670    | 120    | 540    | 1,320  |
| Birch Planks, Standards— |        |        |        |        |        |
| Manchester . . . . .     | 388    | 1,224  | 358    | 115    | 540    |
| Liverpool . . . . .      | 497    | 594    | 297    | 473    | 673    |
|                          | 885    | 1,818  | 655    | 588    | 1,213  |

### Trade Statistics for Liverpool and Manchester

The import and stock of spruce and birch at Liverpool and Manchester for the month ending December 31st, 1912, are reported by H. W. Lightburne & Company, Liverpool, as follows:—

|                                    | Import. |       |       | Stock. |        |       |
|------------------------------------|---------|-------|-------|--------|--------|-------|

### CANADIAN PINE.

Diagram showing estimated duration of supply in comparison with averages of the same, at the same time in previous years—Foy Morgan & Co. London

## 3 in.-4 in. COMMON LUMBER 10 in. and 12 in.

**The Latest and Most Modern Method  
Price for Comparison**

A Cost of 75 Cents per Thousand Feet Board Measure

In many sections of the country, East and West, in spite of the utmost care in sawing there accumulates a vast amount of common lumber, 3", 4" and even 6" wide, which at times is almost impossible to move without cutting the price several dollars per thousand. Most lumber manufacturers would be satisfied were it possible to obtain from their narrow width common lumber the actual cost and, in most instances, in order to move the accumulated stock quickly they are compelled to sacrifice.

By the Linderman method two 4" strips can be joined to make 8" shiplap at a cost which will not exceed 75c per thousand feet, and a comparison of the figures between 8" shiplap and 4" common lumber at what it is sold for, adding to it the cost of joining it together by the Linderman method and the cost of milling it, leaves a net increase in price of from \$2.50 to \$4.00 per thousand. 10", 12" or even wider widths can be built up in the same manner and at the same cost per thousand, no matter whether the lumber being worked is spruce, hemlock, fir, cedar or pine.

Narrow lumber can also be joined together for rough sheathing, partition work, barn or subflooring and other purposes.

There are Eight Different Lengths of Linderman Machines Built  
Ten, Twelve, Fourteen and Sixteen Feet

# CANADIAN LINDERMAN COMPANY

## ER Converted into 8-in., SHIPLAP

or Obtaining a Greatly Increased  
on Lumber

s a Return of From \$4.00 to \$5.00 per Thousand

Shorts and odd lengths can be joined to narrow widths, making a composite board of any length desired up to 16'. This is accomplished by running a binding strip on the outside the full length desired and joining to it two or more pieces of miscellaneous lengths that will equal the length of the binding strip. To this can also be joined another series of short boards so arranged that the butt end joints will not come opposite one another and to this then can be joined the second side binding strip. Such a composite board will show tight joints not only where they are joined together on the edges but the butt ends of the boards will be tight, making a board as strong and stronger than the natural wood. Such a product, while it may not bring a price equal to a wide board of the same dimensions, will yet yield a profit of several dollars per thousand over the cost of manufacture. In this way the cuttings from the flooring machines or from the sawmill can be converted into a marketable product instead of as now being sold as kindling or sent to the burner.

Full information and particulars in detail will be gladly given and we will arrange to work samples of our own stock as you so desire.

Work Stock up to Three, Four, Six, Eight,  
or Longer

# Prairie Provinces' Trade Transformed

Opened the Year 1912 Under Stress of Weak Demand and Strong Competition — Closed With Strong Demand and Stocks Inadequate

The lumber trade of Western Canada has been marked by many features of interest during the past year. The spring trade of 1912 opened with unfavourable conditions predominating and with an outlook quite otherwise than encouraging. The year ended under conditions the exact reverse of those under which it had its inception. Practically every line and department of the lumber trade underwent a change during the eight months between the first of April and the end of December. Every change was for the better and the year ended with the business upon an altogether different plane from that on which it was commenced. The process of transformation was a decidedly interesting one to watch and analyse. One of the most prominent characteristics was the rapidity with which the influences of the different elements produced results in the way of increased demands and in the price lists.

At the opening of the year the influence was still felt on the prairies, of the unfavourable conditions which had been experienced in the harvest season of 1911. Many of the prairie dealers were carrying much more in the way of unpaid accounts than is usually the case. The yards were heavily stocked. The demand was light and the prospects for the year's business were by no means bright. Prices were at such a pitch that manufacturers were declaring emphatically that they were losing money, a condition which they declared was due to the shipping into the prairies of quantities of lumber from the mills of Washington and Oregon at prices which must have left less than nothing at the mills. The heavy consignments of this lumber sent to the prairie markets kept prices at a low ebb and no increase was possible as long as these supplies were available.

## Favorable Crops Assisted Lumber Trade

The first element to enter the situation which brought about the changes outlined above was the inception of favourable conditions regarding the crops in the United States. Once the business community of that country realized that the indications pointed to a more than usually heavy and good crop, business conditions immediately showed improvement. Money became more plentiful. Building increased and after a long season of unfavourable conditions, a decided change for the better took place. As a matter of course, the demand for lumber increased rapidly and materially. It was but a few months until the mills which had been shipping to the Canadian prairies in order to rid themselves of surplus stock, found themselves with reduced stocks, with orders coming in from their own side of the line in such quantity that they were unable to carry on their Canadian connection, and, instead of being obliged to market their stock at cut prices, they were able to put into effect an increased schedule of prices.

The decrease of shipments of United States lumber had an immediate effect upon the lumber trade of Manitoba, Saskatchewan and Alberta. This circumstance alone brought immediately an increase in demand for the output of the Canadian mills. Added to this favourable circumstance and a still more potent factor, was the gradually improving aspect of the crops on the Canadian prairies. As the weeks passed it became apparent that the crop of 1912 would be the greatest in the history of Western Canada and also that the quality would be much above the average. All lines of business immediately felt the impetus of this circumstance. The demand for all lines of long and short lumber quickened and increased. By the end of August the lumber trade of the prairies was already upon a different basis and it was no longer a case of crowding the market to keep stocks within a reasonable limit and to prevent stocking up. A few weeks later the situation was still more changed. The mills were struggling to keep their orders filled. Stocks had melted away before a rapidly increasing demand from the prairies. A number of manufacturers were already limiting their representatives as to volume of orders to be booked, while others were coping with the situation by refusing all orders for periods which varied in length from two weeks to six weeks. By the first of September there had been an increase in price in all lines of long and short lumber with the exception of lath. common dimension advanced, generally speaking, from \$2 to \$2.50 per thousand feet. Shingles also showed material advances. At a later date further increases went into effect and at the close of the season the general base price of lumber might be said to have been \$4 per thousand feet in advance of that of a year earlier. The retail trade followed the lead in the advancing of prices. Retail prices have been generally advanced throughout the west.

The increase in demand and the betterment of conditions applied to the sash and door trade and to other lines affiliated with the lumber business. From the first of September until the end of the building

season the whole prairie trade had the busiest season of its existence and stocks at both mills and yards were smaller than for a number of years. So pronounced was this phase of the business that at many western points the lumber arriving in cars was hauled before the cars were shunted into the yards of the consignees. When the winter set in, it found stocks at the mills and the prairie yards practically cleaned up.

The crop of the past year was a remarkable one as regards quality and was above the average in quantity. The total grain crop was in the vicinity of 450,000,000 bushels, the total amount of wheat being in the vicinity of 180,000,000 bushels. The wheat showed in the grading a much larger percentage of No. 1 Northern, and was much in advance of the previous year in this respect. The weather was very favorable for the harvesting of the crops, after the first few weeks, during which period the rainfall was somewhat excessive for that time of year. After that, conditions generally were all that could be asked for. The threshing season was also better than the average as regards weather conditions. The weather continued mild until well into December, the snowfall being light and the weather being uniformly dry. Such weather was all that could be desired in that it enabled the farmers to do a great deal more fall ploughing than usual, a condition which augurs well for the possibilities of cultivating new territory next spring.

## Railroad Had Not Enough Rolling Stock

One of the greatest obstacles with which the lumber trade of the prairies was called upon to cope, during the year 1912, was the inability of the railroads to handle the available business. Long before the rolling stock was in demand for the handling of the crop, the complaint of the trade in regard to the supply of cars was incessant. Great difficulty in moving the goods was experienced on all sides through the entire season, the difficulty being augmented as soon as the moving of the crop commenced. In the early fall the railroads inaugurated a policy of a most aggressive nature in connection with the holding of cars in the discharging. No exceptions were made and the demands of the railroads in this respect were of an arbitrary nature. The lumber dealers of the prairies made counter claims as to the difficulty experienced in getting transit for cars and data were collected in connection with cases of this kind showing that the railroads were often as much to blame for the tying up of cars for indefinite periods as were the business people. Considerable agitation has been made in favour of having a measure put into effect charging demurrage against the railroads and on behalf of the consignees in cases in which cars are held in transit for indefinite periods as is often the case in the west.

## Financial Conditions Improving

The financial side of the lumber trade of the prairies has not been as favourable up to the present time as might have been expected considering the favourable aspects in other ways. Most of the farmers were behind at the beginning of the year 1912, because of the unfavourable crop conditions of the preceding autumn. It was therefore impossible to clean up many of the accounts until the fall and even up to the present there are many large accounts still outstanding, awaiting the returns from the crop of last fall. Conditions in this connection have been gradually improving and it is confidently expected that the next few weeks will see a still greater improvement. The beginning of the spring business will take place under much more favourable conditions than those of last year and, with better demand and increasing territory, the lumber dealers will be able to use more discretion in extending credits than in past years.

The most important event in the history of 1912 in the lumber business of Western Canada was the long drawn out legal battle between representatives of the manufacturing industry and the selling end of the lumber trade. The manufacturers asked for a new interpretation of the tariff covering the importation of rough lumber from the United States. It was claimed that much of the lumber which had been coming in duty free for some years should have been made dutiable as, in direct contradiction to the wording of the tariff clause, such lumber was further manufactured than merely sawn; there being, it was claimed, more than one process necessary to make it ready for the Canadian trade. The point hung upon the question as to whether the lumber was or was not "further manufactured"; whether the sizing process brought the lumber within the list of "further manufactured" or not. The commissioner of customs decided that lumber which had thus been sized was further manufactured. The exchequer court gave a decision on the same lines, but

the Supreme Court reversed the decision, leaving the importation of lumber on the same basis as it had been hitherto. While the legal negotiations were being carried on, conditions had materially changed and the importation of lumber was no longer a source of great disturbance to the manufacturers.

A feature of the year's business had been the use by the sash and door trade of a catalogue of standard sash, doors and mouldings. This catalogue went into effect early in the season. The arrangements in connection were made by representatives of the Mountain Lumbermen's Association, the Coast Lumbermen's Association, and the Western Retail Lumbermen's Association. This effort to standardize the many different sizes and numbers was successful and one of the chief sources of inconvenience in connection with the sash and door business was removed.

#### Good Prospects for 1913

The general outlook for the lumber trade of the prairies during 1913 indicates that the volume of business will be very heavy and that the demand will be materially increased over that of 1912. Every element which enters into the situation points to such a result. Money will be more plentiful. The acreage under cultivation will be much greater. Stocks at yards and mills are light. The farmers will have more money with which to build than has been the case for a number of years. The demand for small residences in cities, towns, and villages is infinitely greater than was the case at this time last year and the supply is even more limited. Other conditions are in keeping with those outlined above. It is generally conceded that there will be a general upward trend to prices beginning with the opening up of business in March and that manufacturers, wholesalers and retailers will put new and higher schedules into effect from the very first.

## Production of Prairie Provinces

### Reports of Quantities Produced and Marketed During the Fiscal Year in the Three Provinces

The report of the Department of the Interior for the fiscal year ending March 31st, 1912, contains a great deal of interesting matter in relation to the lumbering operations of the provinces of Manitoba, Saskatchewan and Alberta.

The report of the Inspector of Crown Timber Agencies, the ruling price of lumber, the number of mills operated on berths held under license and the number of portable sawmills in operation, is summarized in the following table:—

| Agency          | Total Revenue<br>\$ cts. | Average price<br>per M ft. B. M.<br>at mills<br>\$ cts. | No. mills<br>operating<br>under license | No. portable<br>mills in<br>operation |
|-----------------|--------------------------|---------------------------------------------------------|-----------------------------------------|---------------------------------------|
| Calgary         | 28,091 88                | 16 01                                                   | 15                                      | 18                                    |
| Edmonton        | 83,254 50                | 17 00                                                   | 18                                      | 33                                    |
| Prince Albert   | 52,989 29                | 19 45                                                   | 20                                      | 23                                    |
| Winnipeg        | 94,869 95                | 16 28                                                   | 29                                      | 33                                    |
| New Westminster | 59,412 71                | 14 50                                                   | 7                                       | Nil                                   |
| Kamloops        | 48,162 98                | 14 63                                                   | 8                                       | Nil                                   |

The following quantities of building material were manufactured and sold under license during the year in the above agencies:—

|                       | Manufactured | Sold        |
|-----------------------|--------------|-------------|
| Sawn lumber, ft. B.M. | 240,863,681  | 200,232,482 |
| Shingles              | 85,000       | 85,000      |
| Shingle bolts, cords  | 11,093       | 11,093      |
| Railway ties          | 360,801      | 390,183     |
| Laths                 | 18,343,253   | 13,931,903  |

On permit perths and portable sawmill berths the following material was manufactured:—

|                       | Manufactured | Sold       |
|-----------------------|--------------|------------|
| Sawn lumber, ft. B.M. | 36,711,956   | 21,041,731 |
| Railway ties          | 138,647      | 129,628    |

The revenue received from timber operations during the fiscal year amounted to \$382,396 as compared with \$376,944 during the previous fiscal year.

#### Winnipeg District Operations

The mills operating under government licenses in the Winnipeg district and the quantities which they manufactured were as follows:—

|                                                  | Feet.      |
|--------------------------------------------------|------------|
| T. A. Burrows, Grandview, spruce and tamarack    | 13,235,636 |
| Bank of British North America, berth 15          | 2,688,856  |
| Bank of Ottawa, Durban, No. 1148                 | 253,120    |
| Bank of Ottawa, berth No. 960                    | 5,852,957  |
| Canadian Bank of Commerce, berth No. 1101        | 342,842    |

| Western Lumber Company, berth 1695, 800 pieces   | 24,430    |

In the Winnipeg district there were twenty-nine mills operated under government license and thirty-three under government permits. The total of 51,466,930 feet shown above, is an increase of 4,097,647 feet as compared with the quantity cut during the previous fiscal year. The quantity sold under license as shown above, viz., 48,137,980 feet, is a decrease of 5,862,704 feet. The average price at which this lumber was sold was \$16.28 per thousand feet, which is a decrease of 24 cents per thousand feet as compared with the previous fiscal year.

#### Operations in the Calgary District

The quantity of lumber manufactured from licensed berths in the Calgary district during the fiscal year ending March 31st, 1912, was 21,129,177 feet; the quantity sold was 14,952,291 feet. The quantity manufactured by portable mills under permits was 5,317,639 feet, and the quantity sold by them 3,860,653 feet. The total quantity on hand at the end of the fiscal year was 16,859,443 feet. In addition to the 26,446,816 feet manufactured, it is estimated that about 110,000,000 feet was brought into the province from British Columbia and about 25,000,000 feet from the United States. At the end of the previous fiscal year the quantity on hand was 10,183,758 feet. During the previous fiscal year 22,169,842 feet was manufactured in the district. It was estimated that 150,000,000 feet was brought into the province from British Columbia and apparently nothing from the United States.

According to the report it was estimated that mill owners would require to manufacture from logs on hand, during the sawing season of 1912, 38,602,218 feet. The average price at which lumber taken from licensed and permit berths was sold during the fiscal year was \$16.01 per thousand feet as compared with \$15.77 during the previous fiscal year.

The operations of sawmills under license in the Calgary district during the fiscal year were as follows:—

|                                                                       | Feet      | Aver. price | Aver. size feet B.M. |

| O. E. S. Whiteside, berth 1715        | 1,195,461  |
| Smaller operations                    | 475,804    |

Total manufactured under permits, Calgary district ... 5,317,639

### Prince Albert District Operations

The Crown Timber Agent for the district of Prince Albert in his annual report says:—

The sales of lumber manufactured under license amount to 47,516,621 ft. B.M., an increase of 13,571,816 ft. B.M. over last year. The average price was \$19.45 per thousand feet, a decrease of \$1.12½ per thousand feet. The total manufacture of lumber under license amounted to 77,469,595 ft. B.M., being 43,524,790 in excess of previous year. During the past winter, 1,057,233 more logs were cut than last year. This logging was done principally by the Prince Albert Lumber Company and the Big River Lumber Company on the Timber Berths held by them that had been burnt over, in order to save the timber. The mill at Big River has been in operation for some time now and the Finger Lumber Company's mill is also completed and in operation, and I expect a large increase in manufacturing of lumber this year.

The number of permits issued is 1,509 against 1,149 for the previous year. These permits cover the following quantities of timber:—

Lumber, feet B.M., 6,103,426; logs, lineal feet, 1,062,488; cordwood, 33,312¾ cords; fence posts, 396,875; fence rails, 1,631,605; roof poles, 323,733; shingles, 500,000; railway ties, 14,300.

The number of seizures made during the year was 55, and covered the following quantity of timber:—Lumber, feet B.M., 4,769,881; logs, lineal feet, 4,412; lath, 363,600; shingles, 200,000; posts, 200; cordwood, 168; roof poles, 90.

Under government license the operations of sawmills in the Prince Albert district during the fiscal year were as follows:—

|                                                        | Feet       | Aver. size<br>feet B.M. | Aver.<br>price |
|--------------------------------------------------------|------------|-------------------------|----------------|
| Prince Albert Lumber Company, Prince Albert, berth 474 | 18,042,740 | 61.3                    | \$19.62        |
| Prince Albert Lumber Co., berth 633                    | 6,701,174  | 70.9                    | 17.81          |

| Saskatchewan Lumber Company, Crooked River, berth 1640 | 2,621,400  | 60.0                    | 18.50          |
| Finger Lumber Co., Le Pas, berth 1274                  | 504,148    | 126.                    | 22.35          |
| Big River Lumber Company, Big River                    | 25,756,654 | 38.7                    | 17.84          |

Total manufactured from licenses ..... 77,469,595

The cut also included 2,625,862 board feet logs which had not been manufactured up to the time the schedule was made.

The quantity sawn under government permits in the Prince Albert district amounted to 66,751 pcs. with a total of 3,042,269 ft. B.M.

### New Westminster District Operations

During the fiscal year ending March 31st, 1912, 27,413,121 feet of saw logs were cut from twenty-eight timber berths in the district of New Westminster. This shows an increase of 6,589,396 feet over the previous year. In addition to the above there was cut under permit, homesteaders' permits, etc., sufficient to bring the total up to 46,254,727 feet of saw logs.

### Kamloops District Operations

The Crown Timber Agent for the Kamloops District reports as follows:—

46,912,258 feet B.M. of logs were cut on Dominion berths within this agency during the season of 1911-12, the royalty dues thereon amounting to \$25,602.56. Ground rentals on timber berths approximated \$6,871.74.

The average selling price of lumber in this district was \$14.63 per M.

During the year, 180 permits, covering 5,101,443 feet B.M. of sawlogs, 11,585 fence rails, 5,535 fence posts, and 5,876 cords of wood, were issued to settlers applying.

Owing to the heavy stock carried prior to 1911 by the licensees in some cases, a few of the latter were compelled to curtail operations somewhat during the past winter, with the result that a number of berths were not cut over sufficiently to comply with the requirements of the department. This necessitated charging increased rental on such berths as had been held for a period over that allowed for inactivity by the department. These stocks have since been reduced, and I am led to believe that an improvement in the sales, resulting in increased operations, will take place in the near future.

### Edmonton District Operations

In the Edmonton district during the fiscal year ending March 31st, 1912, sawmill operations were carried on under government license as follows:—

|                                             | Manufactured | Aver. ft.<br>per log | Aver. price<br>per M.<br>m'd. lumber |

Total manufactured ... 16,472,600

The average contents of the logs in the above table was 51.6 feet. Of the above quantity, 14,300,211 feet were sold, leaving a balance of 5,518,994 feet. During the previous year the quantity manufactured was 15,116,146 feet. The quantity sold 18,307,198 feet, and the balance 3,376,143 feet.

The lumber manufactured under government permits in the Edmonton district during the fiscal year ending March 31st, 1912, included the following:—

|                                                       | Feet      |
|-------------------------------------------------------|-----------|
| D. R. Fraser & Company, Edmonton                      | 706,603   |
| John Walter, Edmonton                                 | 4,384,227 |
| John Walter                                           | 55,029    |
| Empire Supply Company, operations John Walter         | 7,169,608 |
| Empire Supply Company, operations D. R. Fraser Co.    | 279,895   |
| John Anderson                                         | 386,172   |
| A. J. Nichol                                          | 1,072,360 |
| George Cummings                                       | 436,660   |
| Empire Supply Company, operations Edmonton Lumber Co. | 2,232,046 |
| Small operators                                       | 3,416,104 |

Total ... 20,138,704

During the year there were eighteen mills operating under government license in the Edmonton district and thirty-three mills under government permits, an increase of one on the license and thirteen on the permits. The average price at which lumber was sold was \$17 per thousand feet, which is an increase of \$1 over the average price of the previous fiscal year.

The Crown Timber Agent at Edmonton in his report says:—

The feature of the year has been the large number of railway construction permits issued, covering 1,864,364 railway ties and 94,339 lineal feet of piling, for the construction of the Canadian Northern main line and branches, and the Grand Trunk Pacific and Alberta Central lines to the Brazeau coal fields. Owing to the number of unfinished inspections by the various companies, it is not possible to give the actual total of ties cut, but including ties cut on licensed berths, I believe same will exceed 2,000,000. As all applications for permits of this nature have been reported on by my inspectors, prior to issue, there has been less unnecessary destruction of growing timber, the woods have been left in better condition and the needs of the settlers have been conserved.

Logging on the North Saskatchewan River during the year was fortunately carried on without the heavy losses so common in past seasons, and the manufactured product of the three Edmonton mill owners was considerably above the average in quantity.

Several licensed berths have changed hands during the year and operations thereon have either been commenced or are shortly to be started; the heavy demand for lumber from the many new railroad points, which demand cannot legally be supplied by the portable mills, certainly warrants larger operations by licensed berth holders.

# B. C. Lumbering and Forestry Statistics

**All Markets Were Good During 1912, and the Outlook is Excellent—Statistics of Revenues and Expenditures**

Specially Contributed By Hon. Wm. R. Ross

According to statistics prepared by the Crown Timber Agent at Vancouver, the mills in the Province of British Columbia are as follows:—

## Operating

|                                                                              |           |
|------------------------------------------------------------------------------|-----------|
| 74 capacity not given                                                        |           |
| 236 cutting per day, feet B.M., .....                                        | 6,689,000 |
| 23 operating on Dominion lands cutting per day, feet B.M. ....               | 632,000   |
| 14 shingle mills, cutting per day, shingles, .....                           | 815,000   |
| 7 shingle mills operating on Dominion lands, cutting per day, shingles ..... | 660,000   |
| 2 pulp mills, tons of pulp .....                                             | 200       |
| Total, 356 mills.                                                            |           |

## Not Operating

|                                 |         |
|---------------------------------|---------|
| 6 capacity not given            |         |
| 15 capacity, per day, .....     | 321,000 |
| 4 shingle mills, shingles ..... | 295,000 |
| Total 25 mills.                 |         |

**Pulp Industry:** The pulp industry is growing rapidly, on account of the demand of local and Western Coast centres. There is also opening up a large trade with Japan, on account of which one mill is said to be doubling the capacity of its plant to answer the call of the Oriental market.

**Sea Market:** Taking the year as a whole the very best conditions have prevailed upon the coast. There has been a large export trade to foreign countries, and an increased amount to the United States.

**Local Market:** Local demand has occupied a very prominent place in the lumber trade during the past year. While a large part of the building permits of about \$40,000,000 in the large coast cities are for steel and concrete buildings, there will continue to be great activity in dwelling house construction. There is a constant influx of people from Eastern Canada and the Continent, through whom the prosperity of the lumber trade is assured.

**Rail Market:** The good crop on the prairie last year will have a wonderfully stimulating effect upon the British Columbia lumber industry. Lumber merchants are already coming to Vancouver to ensure prompt and full shipments to the centres which are certain to undergo great expansion in the next twelve months. Building is general in the prairie provinces, and rail trade is sure to be great.

**Railway Development:** There have been under construction in the Province 1,400 miles of new railroad during the past year, and there will be immense additions to this in the course of 1913.

The five new lines under construction in the Province will have the effect of opening up vast quantities of timber heretofore considered inaccessible and unprofitable to market. This is particularly true in the case of the Grand Trunk Pacific, along whose route there are already springing up several sawmills with a total capacity of about 250,000 feet B.M. per day. There is a very large market immediately to the east, over the mountains, and the production is certain to be both extensive and profitable.

## Forest Surveys

In every country in which the practice of forestry by the Government has been established successfully, it has been found that a comprehensive knowledge of the quality, condition and extent of the forest resources in the country concerned, is the prime requisite of their efficient administration.

The Forest Branch of the Department of Lands of British Columbia has already made a good beginning upon the Forest Surveys needed as a basis for its work. During the past season forest surveys were inaugurated on the Okanagan Lake watershed; the Nicola plateau; the North Thompson watershed; the Salmon River Valley and the Upper Columbia.

The purpose of these surveys is two-fold. The most urgent need for them is to supply information needed as a basis for efficient work in the creation of forest reserves, the construction of permanent improvements and the distribution of the field force. While satisfying these needs these forest surveys will yield at the same time detailed information regarding the stand of commercial timber in the different regions; its size and quality and its availability for successful lumbering operations, which will be of great practical value to lumbermen and other forest users, as well as in the development of a progressive public timber sale policy.

Naturally the completion of these forest surveys will take several years. As rapidly as they are completed the results will appear in the published reports of the Forest Branch, illustrated with the necessary maps of the regions. In the case of the more remote forest regions it will be some time before the necessary work is done as a

basis for its publication. But it is hoped well within a year to issue one or more of the forest survey reports of the Forest Branch.

## Timber Sales

The forest surveys now being conducted will yield prompt and definite information regarding the location, extent and value of those bodies of merchantable timber which the Department should sell in the immediate future. Information from prospective purchasers regarding other bodies of timber will be used as a basis for prompt examinations looking to timber sales.

The procedure in timber sales will involve a cruise by the Government, and the fixing of the price to be paid and of the methods of cutting to be followed by the purchaser. A reasonable deposit will be required as an evidence of good faith, but every effort consistent with the welfare of the forest will be made to facilitate the purchasers logging operations.

A beginning has been made in dealing with small "fractions" of timber lands adjacent to existing operations, the timber on which must be taken out while these operations are being conducted. Sales of this nature now being advertised will yield about \$176,000 to the Government.

## Export of Timber

The export of manufactured timber for the past year has been as follows:—

| Exported on payment of \$1 per M.    |            |            |
|--------------------------------------|------------|------------|
|                                      | Feet B.M.  | Feet.      |
| Cedar .....                          | 33,608,990 |            |
| Spruce .....                         | 1,249,489  |            |
| Pine .....                           | 367,261    | 35,225,740 |
| Exported without extra payment ..... |            | 17,054,635 |
| Total export .....                   |            | 53,280,375 |

In 1911 the amount exported was 47 million feet.

Only two classes of logs are exportable. (1) From lands Crown granted prior to April 1887, upon payment of a tax varying from \$1 up, as provided in section 58 of the Forest Act; (2) From lands Crown granted between 1887 and 1906, which only pay the usual royalty whether exported or not. No other timber is exportable unless manufactured, except ties and poles, which may be exported under an Order-in-Council. The large percentage of cedar that is exported is due to the fact that cedar logs are much higher in price across the line than in the local market at Victoria and Vancouver. This is especially so for low grade cedar for which there is scarcely any market. Low grade cedar which is hard to sell here for \$5 to \$6 per M. readily brings from \$9 to \$10 across the line. Thus there is a big profit in exporting cedar, and for this reason a close patrol must be kept to prevent the export of non-exportable cedar.

## Forest Finance

The forest revenue during the last three years has been as follows:—

|                          |             |
|--------------------------|-------------|
| Fiscal year 1910 .....   | \$2,448,150 |
| Calendar year 1911 ..... | 2,654,824   |
| Calendar year 1912 ..... | 2,735,579   |

The Government expenditure on the forests during the last three years have been as follows:—

|               | Departmental | Forest Protection | Total   |
|---------------|--------------|-------------------|---------|
| 1910-11 ..... | 65,822       | 219,493           | 285,315 |
| 1911-12 ..... | 60,071       | 144,590           | 204,661 |
| 1912-13 ..... | 162,904      | 115,743           | 278,647 |

## Forest Protection

The expenditure for forest protection for the fiscal year to April 1st, 1913, is estimated as follows:—

|                                                    |           |
|----------------------------------------------------|-----------|
| Government .....                                   | \$115,036 |
| Licencees, lessees and private timber owners ..... | 115,036   |
| Railways .....                                     | 13,241    |

\$243,313

This amount includes \$30,000 for telephone and trail construction, look-out stations and ranger cabins, and \$13,000 towards the cost of coast patrol launches.

## Receipts: Forest Protection Fund

Assessments to the Fund are payable on:—

|                               |           |
|-------------------------------|-----------|
| Crown grant timber .....      | 874,715   |
| Leaseholds .....              | 1,008,163 |
| Special timber licenses ..... | 9,089,280 |
| E. & N. timberlands .....     | 200,000   |
| C.P.R. tie reserves .....     | 543,497   |

Total .....11,715,655

Total Fund: At one cent per acre on the foregoing areas there is therefore due:—

|                                    |           |
|------------------------------------|-----------|
| From lessees, licencees, etc. .... | \$117,157 |
| From the Government .....          | 117,157   |
| Total .....                        | \$234,314 |

### Scaling Returns

Scaling in the province falls into two well defined classes owing to very different conditions and methods of logging and manufacture on the Coast lying west of the Cascades and in the interior lying to the east of them.

Coast District: The rapid increase in the scale returns is shown by the following:—

|            | Feet B.M.   |
|------------|-------------|
| 1906 ..... | 175,534,872 |
| 1907 ..... | 413,649,077 |
| 1908 ..... | 407,142,679 |
| 1909 ..... | 475,855,570 |
| 1910 ..... | 640,786,091 |
| 1911 ..... | 559,212,225 |
| 1912 ..... | 780,021,878 |

These figures do not include timber upon which one cent tax only is levied.

Interior District: Scaling returns for the last two years are as follows:—

|            | Feet B.M.   |
|------------|-------------|
| 1911 ..... | 296,836,042 |
| 1912 ..... | 325,371,873 |

### British Columbia Trade had a Fair Year.

During the year 1912 the volume of trade in lumber at Vancouver, B.C., was practically the same as during 1911, although a greater number of large buildings were erected than during the former year. This class of building, however, does not use a great deal of lumber in its construction, and much of what is used, is hardwoods for interior finish. The building permits of Vancouver amounted in value to approximately \$20,000,000, a considerable increase over the previous year. Satisfactory increases were also shown by Victoria and New Westminster.

Retail yards on the prairie and in British Columbia have much lower stocks on hand to-day than they had a year ago. The decrease being estimated at about 160,000,000 feet. For this reason an extensive movement of stocks to the northwest is expected by British Columbia manufacturers during the early part of the present season. Mill men both in the mountain district and on the coast are carrying low stocks at present, making it seem probable that when a large buying movement develops, together with the probable continued scarcity of logs, higher priced lumber will be essential.

Recent statements are to the effect that the Canadian Northern, Canadian Pacific and Grand Trunk railways will construct during 1913, 3,000 miles of main lines and branches.

In the United States, the lumber industry at present has many features resembling those of the Canadian trade to-day. One of these is the fact that logs are stiffening in price and making it probable that dearer lumber will result. During the year 1913 it is expected that there will be an excellent demand for lumber in the United States. Conditions in fact, are brighter in that country than they have been at any time during the past four years.

The logging situation in British Columbia was chiefly marked during the year 1912 by the shortage of stocks which developed during the last few months of the year. This situation was aggravated during January, 1913, by the unusually heavy snow fall which interfered with operations and interrupted the delivery of booms. Many of the coast mills are suffering to-day on account of the shortage of logs. This applies particularly to those mills which depend upon the open market for their supply. There is still only a small quantity of fir logs in the open market and booms are quickly purchased. A good demand exists for cedar logs. Poor run cedar is plentiful and hard to sell. The indications for 1913 are that for the next three months at least logs will be scarce. It is not thought that during the early part of the season the price on graded fir logs will be advanced beyond the present figures of \$7.50, \$10 and \$13, although it is quite possible that temporary advances may occur if the shortage becomes excessive. For the benefit of the lumber industry it is to be hoped that the present figures will not be advanced. Unfavorable weather has interfered with the operation of shingle mills on the coast. This situation is expected to improve during February. Prices at present are \$2.20 per thousand to the trade with a tendency towards stiffening if the demand comes up to expectations.

During 1912 the shingle industry of British Columbia was exceptionally prosperous. The year's cut amounted to about 800,000,000 feet, an increase of about 150,000,000 feet as compared with the cut of 1911. These figures relate only to the shingles which were shipped to the Canadian trade. They do not include the exports of the better grade of shingles to United States points. These exports were quite extensive during 1912.

## Trade Conditions Improved in B.C.

### First Six Months Discouraging—Trade Then Improved—Prominent Manufacturer's Review of Conditions

Editor Canada Lumberman:

Wardner, B.C., January 20th, 1913.

The volume of lumber consumed in Western Canada during the past eight months has largely exceeded the consumption of any previous year. During the first six months of the year, the conditions were very unsatisfactory indeed, owing to the tremendous importation of lumber into the Prairie Provinces from the States of Washington, Idaho and Montana. It is estimated that between four hundred and five hundred million feet of lumber were imported into Canada from January 1st to July 1st, 1912, and considering that the total production of the British Columbia mills excepting those located on the Pacific Coast, during 1911 was approximately seven hundred million feet, one can readily understand that the competition encountered during the present year has been of a nature that would not permit a satisfactory price being obtained for the lumber produced in Western Canada. During the last few months there has however, been a marked improvement in the situation in the United States, so that practically all the lumber that is now being produced by the mills located in Washington, Idaho and Montana finds a ready market in the United States at better prices than those obtained for Canadian shipments, in consequence of which there has been very little United States lumber imported into Western Canada during the last four months.

### Better Prices and Lively Demand

A much more satisfactory price is being obtained for new orders and there seems to be a lively demand for all lines produced by the Canadian mills at an advance of from \$2 to \$3 per thousand above former prices. We are, of course, experiencing the usual car shortage at this season of the year. As a matter of fact as soon as prices began to advance and an improvement in our market became evident, cars for lumber shipments became very scarce and a considerable curtailment in business has taken place on this account, although I believe the Canadian Pacific Railway Company are using every effort and exercising every ingenuity by those in charge of the car distribution, in supplying cars and in moving our product. The car shortage however, has not been as great as was contemplated three months ago by the railways and the shippers. The improvement and resumption of business in the United States has had the effect of inducing a large number of our laborers to leave here for that country, especially those employed in connection with the lumber industry, so that we are experiencing, at the present time, great difficulty in obtaining sufficient men to operate our mills and our logging operations satisfactorily.

There appears to be a marked and continuous advance in price of all commodities used in connection with lumber production, horses being one of the heaviest items. Logging horses that were procured three or four years ago at from \$400 to \$500 a span will bring at the present time from \$700 to \$800, so that, judging from these conditions, we cannot expect to produce lumber as cheaply in the future as we have in the past, especially in view of the fact that the timber that was located adjacent to the mills and to the railways has nearly all been removed, and it is now necessary to invade the interior areas in order to obtain a log supply, which can only be done by the construction of railways and by installing very heavy and expensive railway and logging equipment.

It is gratifying however, to know that as time goes on the development of the logged off lands in the valleys of British Columbia will produce a large portion of the products or commodities used in the districts, such as beef, vegetables and fruit, and it is now conceded and a well known fact that, after the timber has been removed from these lands, the lands themselves will have a greater value than the original crop of standing timber which was heretofore considered the only asset, and in many districts there will be more lumber shipped in and used on every 40 acre tract in the construction of homes, out-buildings, fences and other improvements, than that originally cut from the same area. In the past we have been dependent entirely on the prairie provinces for the sale of our lumber. It will not be long before there will be a local demand in all of the different lumbering districts of British Columbia that will absorb a large portion of our product, although the three Prairie Provinces of Canada must continue to absorb a tremendous volume of lumber during the next twenty-five or thirty years; so that with the completion of the Panama Canal and the tremendous local development on the Pacific Coast of Canada, very little common lumber will be shipped to the interior from the Pacific slope after the lapse of two or three years. Therefore, there should be a steady improvement in the results obtained by the lumbermen in the interior.

### Farmers Adopting More Profitable Methods

The farmers in the Prairie Provinces have had a fairly satisfactory year, although the harvesting of their crops was retarded from time to time by the usual unsatisfactory climatic conditions. The marketing of the crop, is however, retarded by lack of transportation facilities. It is impossible to expect that the country will ever possess sufficient railways and transportation facilities to market this great grain crop in a few months. It is gratifying to note that a great many of the farmers are endeavoring to discontinue the methods pursued in the past, namely, confining themselves exclusively to the production of grain. I think the sessions of the International Dry Farming Congress recently held at Lethbridge, Alberta, were instrumental in demonstrating to the wheat farmer of Canada that a decided gain and improvement could be obtained by more diversified farming, a better system of soil culture, procuring a higher quality of seed, providing shelter for live stock and machinery, and by preparing to house and store their crop, thereby eliminating the sacrifices so incident to the methods pursued in the past, namely, by endeavoring to market the entire product of the soil all at the same moment.

The present indications are that the markets will readily absorb all the lumber that is now manufactured and in shipping condition in the Province of British Columbia. The indications are also that there is likely to be a shortage of lumber during next season, owing to the fact that labor is extremely scarce and the present stocks are extremely low and badly broken, so that barring unforeseen causes and conditions, there should be an active demand for all the lumber and lumber products that can be produced with the present facilities at hand during the year 1913.

Yours very truly,

Crow's Nest Pass Lumber Company, Limited,  
P. Lund, Managing Director.

### B. C. Lumber Prices Advanced

A meeting of the coast and mountain lumber manufacturers was recently held at Vancouver, B.C. The chief subject of discussion was the continued advance in the cost of producing lumber. Reports were presented showing that considerable increases had been taking place in the cost of labor, raw material, mill and camp supply, towing charges, etc. It was agreed by all present that some measure of relief was necessary if the prosperity of the lumber industry was to be maintained. Stocks on hand at the mills were reported low and present prices on some lines were shown to be too low for profit. After considerable discussion it was decided to ask for the following increase on list prices per one thousand feet of the upper grades:—

|                                            |        |
|--------------------------------------------|--------|
| Flat grain stepping .....                  | \$3.00 |
| 6 and 8-inch finish .....                  | 1.00   |
| 14, 10 and 12-inch finish .....            | 4.00   |
| 14 and 16-inch finish .....                | 4.00   |
| 18 and 20-inch finish .....                | 4.00   |
| Door jam stock .....                       | 2.00   |
| Base stock .....                           | 3.00   |
| 1 x 4 edge grain flooring .....            | 1.00   |
| 1 x 3 edge grain flooring .....            | 3.00   |
| 1 x 4 and 6-inch flat grain .....          | 1.00   |
| No. 3 flooring .....                       | 1.00   |
| V-joint ceiling, 1-inch Nos. 1 and 2 ..... | 1.00   |
| No. 3 .....                                | 2.00   |
| Nos. 1 and 2 siding, 1 x 6-inch .....      | 2.00   |
| No. 3 siding, 1 x 6-inch .....             | 1.00   |
| 1 x 4 Nos. 1 and 2 siding .....            | 2.00   |
| 1 x 4, No. 3 siding .....                  | 1.00   |

Reductions were agreed upon in the following cases:—

|                            |      |
|----------------------------|------|
| 1 and 2½ x 4 ceiling ..... | 2.00 |
| No. 3 ceiling .....        | 1.00 |

The meeting discussed the question of the duty upon lumber entering Canada. A memorial was drawn up and forwarded to Premier Borden, outlining the claims of the Canadian lumber industry to fiscal protection. The memorial pointed out that the lumbering industry was the largest and the only natural industry which was not protected against foreign competition. In addition to this, lumber manufacturers were required to purchase supplies and machinery upon which heavy import duties were collected.

The imports of United States lumber into Canada (the Western Provinces being especially affected) during 1912 reached the large total of about 550,000,000 feet, the value being nearly \$10,000,000. It is estimated that 80 per cent. of all imported lumber comes into Canada free of duty. With a reasonable amount of protection, Canadian manufacturers of lumber believe that they could exclude foreign lumber to a large extent, preserving the home market for the Canadian industry and keeping the purchase price of lumber at home.

### British Columbia Cut Greatly Increased

Official figures compiled by G. D. McKay, Timber Inspector of British Columbia, show that the receipts of his office for the year amounted to \$78,125.38 more than those of 1911, and that the timber scaled in the province for 1912 exceeded that of 1911 by 65,000,000 feet. During the month of December the receipts of this office amounted to \$67,439.08. This exceeded the previous high record made in the month of October, 1912. The figures for the last two years are as follows:—

|                             | 1912.        | 1911.        |
|-----------------------------|--------------|--------------|
| January .....               | \$45,309.13  | \$51,020.75  |
| February .....              | 36,944.46    | 25,612.77    |
| March .....                 | 24,088.96    | 31,018.64    |
| April .....                 | 46,552.21    | 38,977.02    |
| May .....                   | 32,084.16    | 25,324.96    |
| June .....                  | 34,081.39    | 32,634.72    |
| July .....                  | 44,196.05    | 38,731.44    |
| August .....                | 60,650.64    | 52,281.44    |
| September .....             | 47,562.91    | 30,441.87    |
| October .....               | 67,318.17    | 56,082.56    |
| November .....              | 48,919.55    | 43,687.23    |
| December .....              | 67,439.08    | 51,408.92    |
|                             | \$555,147.71 | \$477,022.33 |
| Increase for year .....     |              | \$78,125.38  |
| Increase for December ..... |              | 6,030.16     |

During the month of December, 1912, the quantity of timber scaled was 62,440,000 feet. The total for the year was 770,000,000 feet, as against 605,000,000 feet in 1911.

Recent reports state that all the mills in the vicinity of Vancouver are at present working up to their capacity night and day.

The approximate cut of British Columbia mills for nine years, was as follows:—

| Year.                  | Feet.         |
|------------------------|---------------|
| 1903 .....             | 317,551,151   |
| 1904 .....             | 348,031,790   |
| 1905 .....             | 473,713,986   |
| 1906 .....             | 508,069,969   |
| 1907 .....             | 846,000,000   |
| 1908 .....             | 658,000,000   |
| 1909 .....             | 775,000,000   |
| 1910 .....             | 1,040,000,000 |
| 1911 .....             | 1,201,778,494 |
| 1912 (estimated) ..... | 1,550,000,000 |

### Re-Elected to Toronto Board of Trade

Mr. Hugh Munro, Toronto

Mr. Hugh Munro, of the Oliver Lumber Company, Limited, Toronto, has been re-elected a member of the council of the Board of Trade, Toronto, for 1913.

Mr. Munro was born in Toronto, received his education at the public schools of that city and has resided there practically all his life. He is justly proud of the fact that he was in charge of a lumber yard when only seventeen years old. His business career started with Messrs. J. P. Wagner & Company, manufacturers of sash, doors, blinds, etc., and on leaving this company he entered the employ of Mr. J. Walsh, hardwood lumber dealer. On terminating his agreement with Mr. Walsh he spent fifteen years with the firm of Donogh & Oliver, and when the partnership was dissolved became a partner in the

Oliver Lumber Company, Limited. As a result of this long experience, Mr. Munro has acquired a thorough knowledge of all the phases of the lumber trade and the various purposes for which the different kinds of lumber are adapted.

For many years Mr. Munro has been a member of the Board of Trade of Toronto, and has served a considerable time on the transportation committee. In 1912 he was elected to the council of that body, and his good work in this office assisted in securing his re-election for 1913.

### Mr. Hugh A. Rose Returns From the West

Mr. Hugh A. Rose, Toronto representative of the Canadian Western Lumber Company, Limited, has returned to Toronto from a trip to Fraser Mills, B.C., where he attended the annual convention of salesmen of the company. Mr. Rose reports that his company cut 170,000,000 feet of fir at Fraser Mills in 1912, and that they found a ready market for it all. It is their present intention to cut 200,000,000 feet this year at the same mill and they anticipate that a large portion of this will find a market in Eastern Canada. Mr. Rose reports also that the stocks at Fraser Mills are considerably lower to-day than they were a year ago. The company find the market steady with a strong upward tendency. Clears have advanced, and no doubt common lumber will follow suit. The year 1912 was the best his company have had for six years, and they believe that 1913 will surpass last year. The Canadian Western Lumber Company, Limited, are at present building a cedar mill, shingle mill, and a sash and door plant, work upon which is being pushed rapidly.

### Pin Trays Made by a Linderman Automatic Dovetail Glue Jointer

The Canadian Linderman Company, Limited, Woodstock, Ont., have sent to this paper a sample of a very handsome pin tray of polished hardwood which they are distributing among woodworking plants of Canada. These pin trays were made from small strips of waste wood at the plant of the Paine Lumber Company, Oshkosh, Wis., manufacturers of the famous "Korelock" doors. They have eleven Linderman machines in their plant. The pin trays have been splendidly executed. The hollow rounded centre section of the tray clearly shows that a Linderman joint can be cut at any angle and show a perfect joint. The pin tray is a fine and unique sample of workmanship.

The Canadian Manufacturers Association announce that Mr. J. R. K. Bristol has been appointed manager of the Associated Tariff Department in place of Mr. R. W. Breadner who recently resigned. Mr. Bristol like his predecessor, comes to the association direct from the service of the Government at Ottawa, where he occupied the position of Chief Dominion Appraiser and member of the Board of Customs.

The Fassett Lumber Company, Limited, Fassett, Que., advise us that Mr. A. D. Cooper, of Toronto, represents them no longer, and that their customers will be looked after from their main office at Fassett, Que.

Mr. Arthur H. Campbell, managing director of the Campbell-MacLaurin Lumber Company, Montreal, has been elected to a seat on the Council of the Montreal Board of Trade.

# WANTED & FOR SALE DEPARTMENT

## PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (\$2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

## Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

## Hardwood Pickets Wanted

Beech, Birch and Hard Maple.

1 x 1 x 42.  
1 x 1 x 48.  
1 x 1 1/2 x 42.  
1 x 1 1/2 x 48.  
1 x 1 3/4 x 42.  
1 x 1 3/4 x 48.

Require Thickness, 1/16-in. Plump.

Quality—Free from all defects.

Can take delivery of green or dry stock.

Apply to The Canada Wood Specialty Co., Ltd., Orillia, for full particulars, price, etc. 24-1-TF

## For Sale

50 000 sets Red Birch Wagon Hubs, turned and mortised to patterns. Correspondence solicited. Address Box 686, Canada Lumberman, Toronto, Ont. 2-3

Two hundred acres hardwood bush, District of Parry Sound. Small mortgage of \$1,000 against it. What will you trade?  
B. J. McCORMICK,  
2-3 Welland, Ont.

**Poplar in France.**

Cottonwood for a long time was considered almost worthless, but the demand for box material brought it into extensive use. In fact, it is no longer an inexpensive wood, and the trade is looking for cheaper substitutes.

Owing to the large dimensions it attains, the clearness and uniformity of the wood, combined with lightness and toughness, it is peculiarly fitted for many important purposes, says the Hardwood Record. Cottonwood is one of the most rapid growers of our forests and reaches merchantable proportion in twenty-five years, or even less. In France, poplar which corresponds to our cottonwood, ranks second only to oak in importance of native timbers. The annual wood product of poplar is valued at six million dollars. Paris alone consumes about seven million cubic feet. It is there, as here, one of the few trees which he who plants it can harvest, and its extended propagation is being strongly recommended. Plantations are best started from one-year-old seedlings. A height growth of five feet the first year after transplanting is very common.

**Care of Oak Floors.**

If one only knows how, nothing is easier than the care of a well finished oak floor. Water should never be used on a waxed or varnished floor. The surface may safely be wiped with a cloth dampened in tepid water to remove dirt and dust, but the dampness should be immediately taken up with a dry cloth.

One of the best mixtures for keeping a floor in good condition is the use of equal parts of sweet oil, turpentine and vinegar well mixed, and rubbed on the floor with waste or cotton or woolen rag. The vinegar will cut the dirt or grime worked into the finish from shoes; the sweet oil produces a lustre and the turpentine promptly dries the moisture.

The above mixture need not be applied oftener than once a month to insure a floor finish that will resemble the sheen of a piano.

Should wax finish become worn in spots from hard usage, a little of this mixture thoroughly rubbed, will renew the finish quickly.

The occasional use of a weighted floor brush, alone or with a piece of Brussels carpet placed beneath it, will assist in keeping the finish of an oak floor in good condition.

Once a year it is well to use a good floor wax and rub it into the floor with the aid of a brush, with or without a piece of carpet attached. Before the finish is worn down to the wood, an additional coat of wax should be applied and thoroughly rubbed.

### Montreal Trade Expects Good Year

Montreal, January 27th (Special to the Canada Lumberman): If present indications form any criterion, lumbermen should have a record year during 1913. At this period, business is generally very dull, but wholesalers report that the market is unusually brisk, and that, as compared with last January, there is a large volume of trade passing. December was a good month, and January, in some cases, is even better. Lumbermen are all optimistic as to the current year, basing their opinions on the continuance of the building boom and general expansion of commerce. There is no doubt that prices will rule higher, as manufacturers are pretty certain to demand more for their lumber. Stocks of spruce are very low, and there is evidence of a continued demand for the low grades of lumber.

The large public and private works last year resulted in heavy orders for dimension timber, and as many important railway, harbour and similar contracts will be in progress during 1913 there is every likelihood of even better business in this section of the lumber trade. So far, many inquiries for dimension timber have come to hand.

At no time since the passage of the Reciprocity Bill at Washington has the national situation as regards paper and pulp been as interesting as it now is. In the first place, the Democrats have been hearing the pros and cons regarding the paper and pulp duties, and the Customs Court of Appeal have heard arguments by counsel for European importers in favour of giving Europe the right to import paper and pulp free—arguments which have been combatted by the United States Attorney-General. Another case is also before the Board of Appeal in New York, aimed at killing section two of the Reciprocity Bill. A well known Canadian authority on paper and pulp expressed the view that the Democrats will leave clause two as it stands, and probably reduce the paper and pulp duties considerably. Some people however, go so far as to believe that the new United States Government will entirely remove the duties from pulp and wood pulp papers such as news.

The heavy rainfalls have kept the stocks of ground wood very large and increasing, both in Canada and the United States, and prices remain about the same. If the rainfall continues next season as it has in the past, there will be a bad outlook for the sale of ground wood that must be shipped to the United States. Up to the present every mill in Canada has run to its full capacity. None have been forced to curtail production, preferring to pile up ground wood in the belief that an active demand will come later.

Sulphite continues a very strong market. One of the large Canadian mills has been forced to stop production owing to an accident. The situation in Europe is one of rapidly advancing prices, and it looks as if there will be great scarcity this winter.

### Criticizes the Embargo Removal

Referring to the raising of the embargo on the Crown limits of the Laurentide, Wayagamack, Belgo-Canadian, and Price Companies, a Montreal lumberman interested in Crown limits strongly objects to what he describes as the discriminating policy of the Government. He expresses a fear that, with the facilities at the command of these companies, they will manufacture pulp beyond their requirements for paper, and sell it in the United States at a price with which it will be impossible for others to compete. Those who have to buy their wood from the holders of private limits, he believes, will be at a disadvantage as compared with the companies named, who, by the raising of the restriction, are placed in a position to get wood from their Crown limits at a rate considerably lower than people who purchase from the possessors of free lands. Probably the companies named will not sell wood to the United States, but he would be surprised if they did not sell pulp. The Quebec Government aimed at the erection of further paper mills in the province, but he was doubtful as to whether this would be accomplished under the present policy.

### Prices Stiffening at Ottawa

Ottawa, January 24th (Special to the Canada Lumberman): The lumber trade during the past few weeks has been surprisingly brisk. Usually, at this time of the year, lumbermen are busy stock-taking and settling up accounts. Consequently sales are apt to fall off. The mild weather has enabled building operations to be carried on right through the winter, with but little interference, to the advantage of the lumbermen generally. Prices are rising steadily and are likely to go higher. All grades of pine have increased lately from five to ten per cent.

About the most important happening of the week, of interest to lumbermen was the fourth annual meeting of the Conservation Commission, which was held last Tuesday and Wednesday. Forests was one of the chief subjects discussed. Senator W. C. Edwards, head of the W. C. Edwards Lumber Company, acted as chairman. Others well known in lumber circles who were present included: C. A. McCool, ex-M.P., Dr. B. E. Fernow, Dean of the Faculty of Forestry of the University of Toronto; James Lawler, secretary of the Canadian Forestry Association; Clyde Leavitt, chief forester of the Conservation Commission, and chief fire ranger for the Railway Commission, and R. H. Campbell, head of the Forestry Branch of the Department of the Interior.

An interesting and important matter was brought before the commission just before the meeting closed by Mr. C. A. McCool, ex-M.P., the well known lumberman. He said that the commission should take action to clear the Ottawa river of the dead logs. There are so many under the surface of the

water right in the channel mapped out for navigation, that small craft on the river are frequently exposed to danger. In one part of the river, in a comparatively small radius, he estimated that there are fully ten thousand logs either in or near the navigable channel. The majority of these logs are worth considerable money.

Mr. E. R. Bremner, manager of the lumber firm of Watson and Todd, was last night elected second vice-president of the Ottawa Board of Trade. There was a keen contest for the office, between Mr. Bremner and Mr. Gordon C. Edwards, of the W. C. Edwards Company.

The recently formed organization known as the Ottawa Lumbermen's Credit Association has already proven useful to several firms.

### Tonawanda Firms Expecting Free Lumber

North Tonawanda, January 22nd (Special to the Canada Lumberman):—Canadian lumber is going on the free list. Members of the local delegation of lumber dealers who appeared before the Ways and Means Committee of Congress last week say the atmosphere at the Capitol fairly reeks with "free lumber" sentiment and that senators and representatives alike are determined to take the duty from all imported lumber. The Tonawandas have seen it coming, however, and are prepared. In the words of a prominent North Tonawanda lumberman: "We are ready for free lumber. In fact the future of the local market might be said to depend on the removal of the duty. At least no harm can result. It is so notoriously a fact that same half-dozen interests control the entire standing stock of white pine for instance that prices are sky high. We want all the lumber we can get. It is problematical whether Canada offers the key to the present situation, but we are willing to let Canada try. As proof of the changed sentiment toward free lumber it is only necessary to call attention to the mild protest offered at Washington last week. Compare it with two years ago for instance when there was so much anxiety over the prospect of even a reduction in the tariff that the election of United States senators figured in the balance. The tariff is coming off Canadian and other imported lumber and it will stay off. What is more the American market will benefit by the change."

Batt Brothers, whose organization as a local lumber firm was announced in the Canada Lumberman recently, have been incorporated with a capital of \$25,000. They have purchased the plant and stock of the former C. J. Wilk Lumber and Woodworking Company on Elliott Creek. C. J. Wilk will move to Detroit where he has organized a company to make portable garages.

The open weather to date has been a boon to the local lumber trade. It has been unnecessary to stop out-of-door work at any time, for more than a day, and the result is that lumbermen are busier than ever, considering the time of year. Salesmen report a brisk demand for all kinds of building material. The mild weather has been prevalent throughout the entire territory supplied from the local market.

The Transfer Lumber and Shingle Company is building a large warehouse adjoining their office on Island street for the housing of shingles, siding, etc.

Fire swept the box plant of William H. Crabb on Tonawanda Island clean on January 9th. The building was owned by White, Gratwick & Mitchell, lumber dealers of North Tonawanda. With stock, etc., the loss will run close to \$25,000, partly covered by insurance. The origin of the fire is a mystery.

Lumbermen in the Tonawandas are elated over the incorporation in the river and harbors bill, approved for passage by congress, of an item calling for the further deepening of the local harbor to 23 feet. Since practically all of the lumber that arrives at the Tonawandas comes by boat, local lumber interests have always been behind any plan to deepen the harbor. When the excavating is completed which will be before the opening of the ship canal at Black Rock, there will be a continuous deep water channel of 23 feet from the head of the Great Lakes to the north end of the Tonawandas harbor.

Low estimates place the value of building operations in the Tonawandas for 1913 at \$1,500,000. Practically all of this will be spent on new factories or additions to old ones.

### No Snow or Frost in North Shore Woods

Thessalon, Ont., January 20th (Special to the Canada Lumberman):—The weather so far has been very unfavorable for lumbering operations this winter. No frost nor snow; consequently the lumbermen are not getting their logs out. The lakes will not carry, and all round the prospects are not very bright. Should this weather continue the balance of the month a large percentage of the logs will be left on the skids. There is a shortage in the output compared with previous seasons, and if the logs are left in the woods the mills will have a short season. Eighty per cent. of the lumber is already sold and at record prices, one firm getting \$30 per M. for their white pine, and \$20 per M. for their Norway, No. 4 culls \$16. So that if the logs are left in the woods there will be a serious loss to the lumbermen.

There is the best opening for a box factory and planing mill at Thessalon of any point on the shore; a good site, both rail and water shipment and a good dock, can be got very cheaply from the Dominion Government. It is a surprise that someone has not picked this site up and now that free lumber is in sight some lucky party will get this site.

I trust that before writing you again the clerk of the weather will make a change in the atmosphere and give us zero weather and 2 feet of snow.

# Review of Current Trade Conditions

## Ontario

The general absence of frost and snow in southern Ontario and the Ottawa Valley district has now brought about a very serious state of affairs, and unless a heavy frost sets in, followed by a considerable quantity of snow, it is impossible to predict what the effect will be on the lumber market. Before this condition of the absence of frost and snow arrived, it had been estimated that in Ontario alone there would be anything from 25 to 50 per cent. less lumber cut than last season. In the Georgian Bay district especially, the cut will be small, and now that the lumbermen cannot haul their logs, the amount of lumber for disposal during the coming season cannot be estimated with any degree of accuracy.

If any great quantity of logs is cut and has to be left in the woods until next year, the loss in depreciation on this stock will be large and manufacturers will no doubt be forced to raise the prices on any stocks they may now hold, so as to help to protect themselves against next season's loss. As the situation stands, even at this early date, those who are holding any stocks are loth to dispose of them or, if selling at all, are asking high prices.

Under the uncertain conditions now obtaining, it is difficult to say anything about present prices, but it is a fairly safe prediction that no appreciable drop may be expected for some time. On the contrary, unless a series of unexpected events occur, a considerable rise in the prices of both soft and hard woods may be depended upon.

In spite of the unsettled state of the market, business seems to be opening up well, planing mills being unusually busy for this time of the year.

## Eastern Canada

The lumber trade in Montreal is experiencing excellent business conditions and the general opinion is that during 1913 a record volume of trade will be transacted. As a rule at this time of the year, the lumber trade is dull, but to-day it is unusually active. During December the volume of trade was quite satisfactory and in many cases an improvement was shown during January. Every one is optimistic about the present year and expects a continuance of the remarkable building activity and commercial expansion which characterized 1912.

All grades of eastern spruce are fairly active at New York. Stocks are scarce and mill prices are as strong as ever. All indications are that there cannot possibly be any decline in prices. The hardwood trade at New York is quieter, but prices continue strong. A very active spring trade is confidently expected. Plain and quartered oak are strong and there is a good movement in maple and birch of all grades and sizes. The good demand for hemlock continues and the outlook is that a firm trade can be relied upon during the early spring. Spruce continues firm at Boston although buyers are not, as a rule, anticipating their wants. Northern mills report exceptional difficulty in getting their stock out of the woods. The trade in shingles at Boston has been very light with prices unchanged.

## United States

Encouraging conditions continue throughout the lumber trade in the United States and the belief is still general that the lumber market will continue strong with an upward tendency. Building operations continue to make remarkable gains. Reports from the yellow pine districts are to the effect that stronger prices and better inquiries are noticeable. The improvement in the demand is not confined to special districts but is well distributed. Mill stocks, generally speaking, are not heavy and logging conditions have not been such as to encourage extensive operations.

Chicago: In spite of unfavorable weather the demand for lumber at Chicago has shown no decrease during the past fortnight. Receipts of lumber at Chicago during the week ending January 11th, 1913, totalled 59,060,000 feet, as compared with 19,785,000 feet during the corresponding week of 1912. Shipments for the week ending January 11th, 1913, totalled 17,755,000 feet, an increase of 9,613,000 feet over the corresponding week of 1912. Orders are commencing to come in for northern pine. Market conditions are strong and prices are steady. The scarcity of box material continues and prices are high. The hardwood trade in Chicago is expecting that 1913 will be a record year. Inquiries are already very heavy and dry lumber of all kinds is scarce, prices are firm and steady, occasional advances being reported. Oak is scarce. Northern hardwoods are firm and unchanged. A splendid inquiry is reported for hemlock, both from country and city yards. The situation is exceptionally strong. A fair demand is reported for California sugar and white pine. Southern pine is firm, prices being maintained without any effort. For this season of the year the demand is exceptional. A number of manu-

facturers are reported to be badly oversold. Red cedars are nominal at \$3.27 for clears and \$2.74 for stars, Chicago basis. White cedars are held at \$3.25 for extras and \$2.65 for stars. There is a steady demand for lath and prices are firm.

Buffalo.—The demand for white pine has improved since the completion of the inventory season. There is a fair demand for nearly all grades. The box factory demand is rather quiet as yet. Continued activity is expected in the building and factory demand during the balance of the winter and spring. Higher prices are expected. The hardwood trade is in a satisfactory condition for this time of the year. Some improvement is noted since the commencement of the year. It is rather a difficult matter for those who have broken stocks to fill in again with a good selection. Practically all prices are firm and likely to advance, wherever there is any considerable increase of business. There is a fair inquiry for hemlock and prices continue strong. Instances are reported of hemlock selling higher than yellow pine. Consumption of rough lumber is rather less than it was a month ago, but there are indications of an increase. Prices of short leaf pine are firm and stocks are scarce. Southern pine continues firm with advances in some cases. A number of large mills raised their price \$1 a thousand feet on January 1st. The trade in shingles is quiet with prices steady.

North Tonawanda.—There has been rather a heavy buying of stock at producing points at the head of the lakes and in Canada during the last few weeks by Tonawanda interests. Dealers looking for low grade stocks have had a difficult hunt, as the season's cut has been practically all contracted for. Trade is normal in all lines, with the exception of "box" and "barn," for which there is a strong demand. Active sales of hardwood are reported. Plain and quartered oak and maple are in good demand. Orders for hemlock are coming in steadily and contracts for early delivery next spring are numerous.

## Great Britain

Great Britain:—All the wood brokers in Great Britain who are in the habit of issuing annual circulars are agreed as to the encouraging conditions of the timber trade. During 1912 business was more profitable than since 1907. The London spot market continues steady though not exceptionally active. Transactions for forward delivery are being made on satisfactory terms. A number of these are reported and they have steadied the market, having been made at a uniform rate. Deliveries at the London docks for the week ending January 4th totalled 4,834 standards, as compared with 5,708 standards during the corresponding week of 1912.

Reports from Liverpool are to the effect that the business of the new year had not as yet got well under way by the end of the second week of January. Improvements however, was expected during the following week. The small arrivals of spruce deals from St. John, N.B., by liners were sold off quickly at the highest price ever known. A large amount of this advance however, is going into the pockets of the steamship owners, who are now able to command almost any rate they want for the transport of deals from New Brunswick and Halifax. It is difficult now to secure spruce from St. John or Halifax at a freight rate under 52s. to 56s. per standard to Liverpool. The demand for Canadian pine deals is fair. Orders are somewhat limited in extent, but they indicate that buyers are gradually coming to the conclusion that they have to face the high price if they want stocks. It is a long time yet before arrivals of next season's shipments can come to hand.

## Barbodos Market Report

S. P. Musson, Son & Company, Barbadoes, B.W.I., report under date of January 2nd as follows:—Lumberstuffs.—W. pine—Arrivals during the fortnight consist of the Schr. "Nicola" with 102 m. ft. which had been sold to arrive at \$33 for merchantable, and \$25 for second quality, and the Trn. Schr. "Melba" with 400 m. ft. which had also been sold to arrive at \$32 and \$24. The market is now fairly well supplied with this class of lumber. Spruce—No receipts and dealers' yards are getting bare. Pitch pine—No arrivals. Shingles—The Trn. Schr. "Alfarata" arrived on the 20th December with 1,021 m. extra No. 1's which realized \$2.55, and the "Melba" had a deck load consisting of 716,000 bundles, all of which we understand were lost overboard. No receipts of long Gaspé for which there is a good demand. Shooks—We note the arrival of 858 bundles Portland packs by the S.S. "Korona" imported on dealers' account. Wood hoops—The S.S. "Serrana" brought 700 bdls. imported by a dealer.

A Winter Scene at our Mills in Sarnia.

# We Saw all Winter

¶ You can always be sure of getting what you want from us because we saw all Winter and all stocks are always "piled high."

¶ Norway and White Pine a specialty. We are able to make large or small shipments on very short notice.

¶ Are you in the market for heavy timbers? We cut them any length required up to 60 feet from Pine and B. C. Fir.

## Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

A. F. HOLDEN, Pres. F. H. GOFF, Vice Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

**U. S. Cut of Lumber, Lath and Shingles, 1911**

A preliminary statement of the output of lumber, lath and shingles in the United States during the calendar year 1911, 1910, 1909 and 1908 has just been issued by the Census Director. The data were collected in co-operation with the Forest Service. The reported production of lumber in the United States during the calendar year 1911 by 28,107 mills, was 37,003,207 M. feet board measure, as against 40,018,282 M. feet board measure reported by 31,934 mills in 1910; 44,509,761 M. feet reported by 48,112 mills in 1909, and 33,224,369 M. feet reported by 31,231 mills in 1908. The data for 1911, 1910 and 1908 were gathered by correspondence, and while including the cut of practically all of the larger or commercial plants for these three years, do not cover the operations of many of the neighboring or custom mills. It should be pointed out, furthermore, that the totals for 1911 and 1910 do not include the output of any mills which reported a product of less than 50 M. feet during these years. Returns for about 4,500 mills of this character were secured in both 1911 and 1910, but omitted from the tabulations.

While the industry of lumber manufacture is widely distributed throughout the United States, a production during the calendar year 1911 having been reported from every State but one, namely: North Dakota—it is interesting to note that nearly 36 per cent. of the total cut was reported from the five States of Washington, Louisiana, Mississippi, Oregon and North Carolina, ranking in the order named. Furthermore, it will be observed that two of these five states are located on the Pacific coast and three in the South, which regions have in recent years become the principal centers of lumber production in the United States, their combined output in 1911 forming 68 per cent. of the total cut for that year.

The reported cut of softwood lumber in 1911 was 28,902,388 M. feet board measure, or 78.1 per cent. of the production from all woods, while that of hardwood lumber amounted to 8,100,819 M. feet board measure, or 21.9 per cent. The slightly larger proportion of the total production supplied by softwoods during 1911 as compared with the figures for the preceding year is a logical result of the drift in the lumber industry to regions which are chiefly coniferous or softwood.

The five leading species cut in 1911 were yellow pine, Douglas fir, white pine, oak, and hemlock, ranking in the order named, the aggregate output from these woods being 26,835,285 M. feet or 72.5 per cent. of the total production from all species. Yellow pine alone supplied 12,896,706 M. feet board measure, or 34.9 per cent. of the total, while oak, the leading hardwood, contributed 3,098,444 M. feet, or 8.4 per cent.

The comparative summary follows:—

| Lumber Production (M. Feet Board Measure) |            |            |            |            |
|-------------------------------------------|------------|------------|------------|------------|
| State                                     | 1911       | 1910       | 1909       | 1908       |
| United States. . . . .                    | 37,003,207 | 40,018,282 | 44,509,761 | 33,224,369 |
| Washington . . . . .                      | 4,064,754  | 4,097,492  | 3,862,916  | 2,915,928  |
| Louisiana. . . . .                        | 3,566,456  | 3,733,900  | 3,551,918  | 2,722,421  |
| Mississippi . . . . .                     | 2,041,615  | 2,122,205  | 2,572,669  | 1,861,016  |
| Oregon . . . . .                          | 1,803,698  | 2,084,633  | 1,898,995  | 1,468,158  |
| North Carolina . . . . .                  | 1,798,724  | 1,824,722  | 2,177,715  | 1,136,796  |
| Arkansas. . . . .                         | 1,777,303  | 1,844,446  | 2,111,300  | 1,656,991  |
| Wisconsin . . . . .                       | 1,761,986  | 1,891,291  | 2,025,038  | 1,613,315  |
| Texas . . . . .                           | 1,681,080  | 1,884,134  | 2,099,130  | 1,524,008  |
| Minnesota . . . . .                       | 1,485,015  | 1,457,734  | 1,561,508  | 1,286,122  |
| Michigan. . . . .                         | 1,466,754  | 1,681,081  | 1,889,724  | 1,478,252  |
| West Virginia. . . . .                    | 1,387,786  | 1,376,737  | 1,472,942  | 1,097,015  |
| Virginia . . . . .                        | 1,359,790  | 1,652,192  | 2,101,716  | 1,198,725  |
| Alabama. . . . .                          | 1,226,212  | 1,465,623  | 1,691,001  | 1,152,079  |
| California . . . . .                      | 1,207,561  | 1,254,826  | 1,143,507  | 996,115    |

|                           |           |           |           |           |

**United States Exports and Imports of Lumber, Etc.**

According to the monthly summary of commerce and finance issued by the United States Department of Commerce and Labor, United States imports of boards, planks, deals and other sawed material during the first eleven months of the year 1912 were valued at \$16,571,183, other imports included laths, \$1,612,595; shingles, \$1,175,124; wood pulp, \$13,531,669; pulp wood, \$5,883,816. The corresponding figures for 1911 and 1910 were as follows: boards, planks, etc., 1911, \$13,807,078; 1910, \$16,618,916; laths, 1911, \$1,588,828; 1910, \$1,609,320; shingles, 1911, \$1,232,166; 1910, \$1,380,071; wood pulp, 1911, \$12,951,256; 1910, \$11,999,222; pulp wood, 1911, \$5,308,891; 1910, \$5,838,544. According to the same report the exports of lumber to Canada during the first eleven months of 1912 were valued at \$11,831,115; 1911, \$10,034,815; 1910, \$7,020,665.

**Edward Hines Co's Daily Reminder**

The Edward Hines Lumber Company, Chicago, Ill., have sent out to their friends in the trade a 1913 edition of their popular "daily reminder." Those who have been favored with copies of this book in previous years will be greatly pleased to receive the 1913 edition. It is replete with information of much value to the lumberman and to the business man in general. It also contains a great number of excellent illustrations of logging and lumbering scenes. In addition to all this the book is compiled in such a manner as to provide an excellent diary, a complete blank page being given for each day in the year.

## EDGINGS

### Ontario

A. P. Ebert, Wiarton, Ont., has sold his mill to P. J. Bachelor, of Widfield, Ont., who intends to operate it this year.

Daniel Baird, Station street, St. Marys, Ont., is erecting an addition to his planing mill for which he will require new woodworking machinery, saws, planers, etc.

The Expanse Lumber Company, North Bay, Ont., are considering the purchase of sawmill machinery for use at Haileybury, Ont. Information may be obtained at the North Bay office.

Edward Ashley, Mindemoya, Ont., whose mill has been out of commission for the last two years, has had it put into condition for operating during 1913, and expects to commence sawing early in February.

A factory for the making of baskets will be erected at Grimsby, Ont., by Arthur Hewson, care Grimsby Manufacturing Company. Mr. Hewson will be in the market for the latest machinery for the manufacture of all kinds of baskets.

Fred W. Halls Paper Company, Limited, has been incorporated in Ontario with head office at Toronto and capital stock of \$40,000, to carry on the business of manufacturing paper, etc. The provisional directors are F. W. Halls, H. H. Halls, and Florence K. Halls, all of Toronto.

Mr. R. C. Eckert, 434 Queens avenue, London, Ont., is interested in a syndicate which has purchased a site for a furniture factory at London, Ont., adjoining another factory which they contemplate purchasing. They will require machinery and equipment for manufacturing furniture.

The Fred W. Halls Paper Company, Limited, has been incorporated with a capital of \$40,000, to carry on the business as paper manufacturers in all its branches, with head office at Toronto. The provisional directors are H. H. Halls, contractor; F. W. Halls, traveller, and A. A. Bond, solicitor, all of Toronto.

The township of Huron, Ont., will receive tenders until February 10th for supply of 12,000 feet of tamarac plank, 6,000 feet to be 16 feet long and 6,000 feet to be 14 feet long; each to be 3 inches thick and not less than 5 inches wide. Tenders are to be addressed to Angus Martyn, Clerk of the Council, Ripley, Ont.

The Thompson Kanuck-Kitchen-Kabinet Company, Limited, has been incorporated with a capital of \$85,000 to manufacture and deal in timber and all wood products and carry on business as sawmill proprietors, timber growers and merchants, etc., with head office at Belleville. The provisional directors are J. C. Knowles, H. T. Burton and Wm. Kirby, accountants, all of Toronto.

Directors of the Mexican Mahogany and Rubber Corporation for 1913 has been announced, and include Messrs. James Playfair, Midland, president; Chas. E. Read, Ottawa, vice-president; H. W. Richardson, Kingston; James Caruthers, Montreal; Martin Grahame, Toronto; Frank Carrel, Quebec; D. L. White, Midland; Edmund Bristol, K.C., M.P., Toronto; W. Grant Morden, London, Eng.; F. H. Mainley, Montreal, and John Buchanan, Mexico City. The company report satisfactory progress, the statement presented at the annual meeting showing an amount standing at the credit of profit and loss account of \$76,690, or equivalent to nearly eight per cent. on the common stock issue of \$1,000,000. There is an authorized bond issue of \$600,000.

The Abitibi Pulp and Paper Company have a force of over two hundred men at work on their property. The following directors have been elected:—Messrs. F. H. Anson, Shirley Ogilvie, Victor E. Mitchell, D. Lorne McGibbon, Sir Thomas Tait, all of Montreal; James Playfair, Midland, Ont.; Hon. Geo. Gordon, Cache Bay, Ont.; J. A. McAndrew, Toronto, Ont.; Geo. E. Challis, Toronto. The following officers have been chosen: F. H. Anson, president; Shirley Ogilvie, vice-president and treasurer; J. A. McAndrew, secretary; E. C. Morris, assistant secretary and treasurer. The underwriting of the company's securities is being taken up privately. The authorized capital is \$1,500,000 bonds, \$1,500,000 preferred, and \$3,500,000 common stock. Of the bonds and preferred stock it is proposed to issue \$1,000,000 each.

### Eastern Canada

The Sackville Woodworkers Limited, Sackville, N.B., are offering their factory and plant for sale.

A fire occurred recently at the saw mill of Mr. E. Girard, Moreau street, Montreal, causing only slight damage.

Aitken Bros. Lumber Camp on the Keswick River, N.S., was recently destroyed by fire at a loss of about \$1,000.

The Belgo-Canadian Pulp Company, of Shawinigan Falls, P.Q., are adding to their electrical equipment, having purchased 11 Canadian General Electric motors, aggregating two hundred horse power.

N. Labrie's sawmill at St. Charles, Que., was recently destroyed by fire at a loss of about \$12,000, partly covered by insurance. Mr. Labrie will rebuild. He will be in the market for machinery, steam plant, water wheels, etc.

The city of St. John, N.B., has sold to Mr. Frank H. Davis certain parts of the city's pulp mill at Mispec. The sale included two pumps, two lays, one vertical drill, one planer, one shaper and one small engine in addition to a number of other smaller articles, the price being \$15,250.

The Dominion Commission of Conservation is planning to introduce a system of forest guards along the right of way of the railways in New Brunswick. Such a system has been introduced in the west and a pronounced improvement in the protection of the forests from fires has resulted.

The mill of the Saw Mills Owners Sales Company, Limited, at Belladune, N.B., has been burned out. It was a new winter mill, which had just been

completed, and was fully equipped, including electric light. Preparations had been made for cutting ten million feet of lumber, in fact a small quantity had been cut. The hands were all away on a holiday, excepting the watchman, and the cause of the fire is unknown. There was no insurance on the mill. Arrangements have been made for immediate re-building.

Engineers of Grand Falls Company, Limited, Grand Falls, N.B., have completed plans for immense pulp and paper mills at Grand Falls, which will be submitted to directors at early date. They present alternate plans for bringing water power to the turbines, one being a tunnel through the solid rock about 1,000 feet in length, and the other a canal of about the same length. There is a difference of about \$1,000,000 in the cost of the undertaking.

Fraser Limited, Fredericton, N.B., will spend \$50,000 in rebuilding the mills which they have recently purchased at that place. W. L. Montague, Brantford, Ont., is mechanical engineer for the work. The general contractors are the Watrous Engine Works Company, Limited, Brantford, Ont. The building will be three storeys, 160 x 40 feet. The following supplies will be required: dry kiln, electric light and fire pumping equipment, planing mill machinery, belting, extensive piping connections, pipe covering (asbestos or mineral wool), metal lathe, drill press and sprinkler system.

Reports from Quebec state that the St. Lawrence Pulp and Lumber Corporation, incorporated under the laws of the State of New York, has acquired the limits of the Grand Pabos Lumber Company at the cost of \$1,000,000, and that they will invest \$2,000,000 immediately in pulp and paper mills and in the lumber trade in the province of Quebec. The head office of the company will be at New Carlisle, Bonaventure County, and Mr. John Kelly, M.L.A., for Bonaventure, will be the company's legal representative in Canada. The Grand Pabos Lumber Company formerly belonged to King Brothers, of Que.

Hon. S. N. Parent, president of the Running Waters or Streams Commission of Quebec, spoke in a recent interview on the immense works the commission has undertaken on the St. Maurice River. He declared that the dam which would be constructed would be three times as great as the Assouan Dam in Egypt, which is now the largest in the world. The cost will be at least \$1,250,000. At La Loutre, the town near which the dam is to be constructed, the channel is through solid rock. Mr. Parent stated that the work would be done promptly, despite important studies that must be made first, and that tenders will be called for in the spring. The work will take at least three summers. The reservoir formed by the construction of the dam will have a capacity of over a hundred and fifty million cubic feet of water.

Messrs. D. Fraser & Sons, Fredericton, N.B., have taken possession of the Scott Lumber Company's property, which they acquired in their recent \$150,000 timber lands, purchase, and work has been started upon the improvements to be made at the Victoria Mills. The transfer of the Oromocto Lumber Company, or Low property, has also taken place. The Scott Lumber Company property acquired by the Messrs. Fraser consists of nineteen square miles of leased lands, including crown lands and those owned by the New Brunswick Railway Company, and between 30,000 and 35,000 acres of freehold property. The Oromocto Lumber Company's property includes 73½ square miles of crown lands and 6,000 acres of freehold, including the mill sites at Victoria Mills, Springhill and Magaguadavic. The purchase price of the Scott property is about \$100,000, while the price of the Oromocto Lumber Company property is about \$10,000.

### Western Canada

The British Over-Seas Trust Company, Limited, recently incorporated in British Columbia, with head office at Vancouver, included among its various powers granted by charter the right to secure and develop timber limits, pulp or paper making works, sawmills, etc. The capital of the company is \$250,000.

The woodworking factory belonging to Mr. J. M. Bateson, 1239 12th ave. west, Calgary, Alta., was recently destroyed by fire at a loss of \$60,000, fully covered by insurance. The loss included the building, material and machinery.

### Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing to the Department of Trade and Commerce and stating the number of the enquiry.

1304. **Soft wood strips, hickory handles and birch poles.**—A Bristol firm want large quantities of soft wood strips 24 inches long x 1¾ inches x 1 in.; hickory handles, all kinds; birch poles 6 feet to 7 feet long. 3 inches to 3½ inches in diameter at small end.

1312. **Broom handles.**—Advertiser about to import into Belfast in large quantities broom handles made from spruce, white pine, basswood or similar wood so long as it is free from knots and white; also fork, pick, shovel and hammer shafts, would like to get into touch with shippers of same.

1318. **Maplewood.**—A European firm aske for maplewood and other wood c.i.f. European or Canadian port.

32. **Spruce.**—A Midlands firm is anxious to get into touch with Canadian shippers of spruce to Bristol, who can quote for their requirements.

The following enquiries are reported from the office of the High Commissioner for Canada, 17 Victoria street, London, S.W.:—

A Toronto correspondent desires to find a market in Great Britain for spruce, pulp wood and spruce pulp; he is open to contract for an annual supply of from ten to forty thousand cords of wood.

An Ottawa correspondent desires to secure the Canadian agency for manufacturers of machine tools, saw mill, paper mill and machine shop supplies.

A London firm ask to be placed in correspondence with Canadian manufacturers of round wooden dowels, for which they report a demand.

A Canadian manufacturer of maple meat skewers asks to be placed in touch with United Kingdom importers.

## Are Your Horses in Good Condition?

Horses for all lumber work are subjected to the hardest hauling under the most severe conditions. They should therefore be as fit as all possible care and attention can make them.

**In the Lumber Camp,  
Around the Mill, In the Yard**

and wherever lumber has to be hauled the horses are always liable to a multitude of small injuries which if not attended to promptly may develop into lameness or disfigurement, thus reducing the working capacity of the horse and impairing its value from a sale standpoint.

You should always have handy and ready for use

### A Good Liniment

to reduce bruises, strains, soreness; allay pain and inflammation quickly, be an antiseptic dressing to a cut or burn, or to heal a wire cut, wound or laceration.

### ABSORBINE

is an antiseptic healing preparation as well as a resolvent and a discutient. It will assist nature in bringing about a dissolution of the bunch, restore the circulation, gradually restoring the part to its normal condition.

It will produce permanent and complete results without blistering or removing the hair, and will leave no blemish. You can work the horse at the same time.

All enquiries on special cases answered without delay—full information and instruction on request. Absorbine \$2.00 per bottle at dealers or express prepaid. Manufactured only by

## The Shimer "Limited" Cutter Heads WITH EXPANSION

will match flooring at the rate of 150 to 180 lineal feet per minute. Special features enter into their construction to enable them to withstand the enormous centrifugal strains, and to cut clean and easy at fast feeds.

They are self centered on the spindles by means of a chucking device which grips firmly thereto when drawn up, making a perfect fastening and one that insures all the cutters doing their share of the work.

If you have a machine that will swing these Heads and will feed up to 150 to 180 lineal feet per minute, we advise their purchase.

Price, net, for Flooring, \$72.46 the set complete like illustrations. In Solid Section, \$67.00 complete.

# HEISLER LOCOMOTIVES

ARE USED IN CANADA

From Anticosti, P. Q. to Vancouver, B. C.

for reasons given below

**HEISLER** truck frames are made from a minimum number of heavy steel parts independent of the gears, and are very strong, but flexible, and readily accommodate themselves to an uneven track. At the same time they are so constructed that they can never be thrown out of the square.

Every engine has but two pairs of heavy steel bevel gears.

In all cases the gears are rigidly mounted, enclosed, oil-submerged and noiseless.

Special tools are not required on the road as the Heisler master gears are clamped to the driving cones of the enlarged axles and can be quickly removed.

Large cylinders, marine type connecting rods, solid forged crossheads and pistons, adjustable case hardened links and single throw crank shaft, are some of the special features of the motor engines.

Every gear is mounted in rigid self contained, enclosing steel frames entirely independent of the truck frames; therefore no abnormal strains whatever can be transmitted thereto from the gears.

Rigid universal central-shaft connections are made at the truck centre which eliminates telescopic slip, and with it the resulting destructive wheel-flange wear, track wear, and racking of the truck frame. In the Heisler Locomotive the truck swing is perfectly free on the sharpest curves and most uneven tracks.

**LOCOMOTIVES** have all bearings fitted with removable phosphorbronze bushing adjustable for wear.

Over four-fifths of the entire weight is of cast steel.

Cylinders and frame cast separate in order to facilitate possible repairs.

Only one pair of eccentrics is used with a view to the simplest possible construction combined with the best possible working.

Motor engines are located to transmit the power through a center-shaft directly below the center of gravity.

On the main frame the load is equally distributed.

The Heisler is fitted with a large roomy enclosed cab made of steel and lined with non-conducting material.

In case of derailment the side-rods of the Heisler Locomotive prove to be a special advantage, since, if a wheel drops between the ties, it is only necessary to block up under the side-rod crank-pins and slowly start the locomotive until it leaves the derailed driver; then apply the brakes to hold fast, and block the driver in the higher position.

Very large fire boxes, liberal heating surfaces and exceptionally large steam spaces are features of the boiler which is throughout of the simplest and strongest possible construction.

Every detail of the entire locomotive is symmetrically designed and is up to the standard in workmanship and best locomotive practice. Spare parts always in stock.

Shafts, axles, connecting rods, piston-rods, etc., are made from hammered forged steel.

## Heisler Locomotive Works, Erie, Pa., U.S.A.

CATALOGUE 108CC ON REQUEST

## Why pay *four men* to produce bevel siding, ship-lap, flooring, ceiling and shooks at 75 ft. per min. when *two* men can produce a *higher grade* of the same stuff at 200 ft. per min.?

—It's certainly not good business policy to pay twice as much to manufacture 75 ft. of lumber when you can get 200 ft. and even more per minute for one-half the labor cost by using a **FAY-EGAN "Lightning"** No. 333-335 Matcher - Resaw, with the Resaw below the Bedline of the Matcher.

—Instead of surfacing double thick at 75 ft. per min. using two men on the surfacer, then trucking or handling to the Resaw and again using two men, a feeder and off-bearer; why not combine both operations on the 333 - 335 Matcher-Resaw, using only one feeder and one off-bearer, eliminating extra handling and trucking entirely and running 200 ft. and

End view (guards removed) showing Resaw set for Bevel Siding, showing also easy accessibility to all parts.

upwards per minute through the combination machine—a total product in lineal feet of stock just double this last figure.

—Here is another point that must not be

overlooked—by your present method 10 to 30% of your stock is degraded because of mismanufacturing and tearing out on knotty and cross-grained stuff. The 333-335 positively will not do this and every piece of lumber put through it will be surfaced, matched and resawed perfectly, raising the grade 10 to 30% as compared to your present method.

—Do you know of any easier way to make money in a planing mill? You can easily figure it out for yourself just what the saving amounts to in actual dollars and cents, or give us some data on your present output and labour costs and we'll figure it out for you.

Send today for our new book on Fast Feed Matchers and Surfacers which fully illustrates and describes the No. 333-335 Matcher Resaw—with the Resaw below the Bed-line.

## Make the Roof as Everlasting as the Foundation!

You construct the foundation of a building of stone because you know that nothing can affect stone—know that it will last forever.

Now suppose your roof was made of the same everlasting stone as the foundation. What an everlasting, fireproof roofing you'd have.

Then why not put on a stone roofing? J-M Asbestos Roofing is a light-weight, flexible roofing that is solid stone to all intents and purposes.

## J-M ASBESTOS ROOFING

is made of several sheets of Asbestos—stone—securely cemented together with Trinidad Lake Asphalt—a mineral. It is all mineral all the way through.

Think what it would mean if your buildings were covered with J-M Asbestos Roofing. It would mean not only permanence and absolute security from leaks, no matter what the climate or weather; but freedom from the cost and trouble of coating or re-graveling, and positive protection from sparks and burning embers. It would mean that your roofing would cost you less per year of use than any other roofing on the market.

We can furnish belts for any kind of work.

Our Special High Speed Leather is something exceptional in Leather Belts.

In writing for information, do not fail to give us Horse Power to be transmitted, diameter of pulleys, and speed.

## Federal Engineering Company, Limited

TORONTO 90 Sherbourne St.

MONTREAL, Unity Building

# Spring Repairs to Your Mill

**T**HE season is at hand to overhaul your mill. When you come to the belting problem we ask that you inquire into the merits of "Goodhue Belting." This belting is made in three different brands. Each brand suited to a special service. All three brands are "A. I." quality leather belts—the kind that won't stretch and **will** "cling" to the pulley.

May we send you particulars and prices?

Goodhue Leather Belts  
"Extra" "Standard" "Acme"

# CIVILIZATION

In days long past, the ax, in the hands of the hardy pioneer, blazed the way for civilization's progress.

To-day and far back into the years that have gone, we see the sawmill, with its ringing circle or band of steel, by whose aid a wide and easy path is cut for the advance of that artificial, yet necessary state, civilization, which brings with it the extraordinary efficiency making possible the greatest achievements; and lifting man higher and higher above the animal kingdom from which scientific searchers claim he has come.

The primeval forest, which shelters the birds, the animals, and the occasional hunter, opposes a massive barrier to man's advance until the days when one, more progressive and adventurous than others, decides that the trees must be sacrificed to meet the needs of civilization as it creeps on and on.

Then comes the sawmill. Before its conquering march the forests are swept away. Where once the mighty forest stood the fields of grain appear. Later comes the small hamlet; next the town; finally the great city, whose inhabitants use the products of the fading forest for shelter and warmth. A continuous growth of man's handiwork where nature formerly ruled supreme; a dream come true through the medium of the sawmill.

There is no surer sign of a country's progress and prosperity than the advent of a sawmill; no more powerful factor in the development of civilization.

But with it all, due credit must be given to the saw—and toolmaker, who supplies to these forerunners of civilization the implements with which the battle is waged. While the iron spirit of the lumberman forces back wild nature, it is the *steel products* of the saw and tool industry that hold the secret of his power.

## HENRY DISSTON & SONS

INCORPORATED

REPRINTED FROM  
THE DISSTON CRUCIBLE  
OF JULY 1912

Keystone Saw, Tool, Steel and File Works  
PHILADELPHIA, PA.

BRANCH HOUSES: { Chicago, Boston, Cincinnati, New Orleans, Memphis, San Francisco,  
Seattle, Portland, Spokane, Toronto, Vancouver

You know what it costs to shovel and wheel sawdust  
Save this High  
Cost by using a **Cyclone Blower**

It will Blow the dust in any direction and as far as desired. Will Pay for itself in one months time. Will not clog or choke up. Built especially for the Circular Saw mill.

## "John Bull" Larrigans

**Wear Like Iron**

WE tan the leather these larrigans are made from and know they will stand all kinds of wet and rough usage when properly cared for. We put a counter stiffener in our larrigans and sew it in with the leg when soled and heeled—a very durable feature in our goods.

Next time you buy larrigans see that you ask for "John Bull."

## The Truck That Saves It's Cost Several Times Over in The Year

This truck is designed for lumber yards and planing mills and will be found invaluable for loading and unloading cars.

The front gearing is detachable and may be used with eight or twelve hind gearings. It is a double-header, nuts on axles being kept tight with Steel Cotter Keys.

Oil cups on the wheels and the fact that there is no resetting of tires saves any amount of trouble.

The old wooden-wheeled truck is a back number in comparison with this. It will pay you to write for our general catalogue which describes these trucks in detail, and pick out the style you want now.

## SELECTION OF LOCOMOTIVES.

WHAT SHOULD BE KNOWN BEFORE YOU PURCHASE LOCOMOTIVES:—

Nature of the service.

Capacity of the cars and weight of train.

Character of track—is it new or old.

Length of haul.

Is time an important factor.

Do you want a quick locomotive or a big puller.

Distance from base of supplies and quarters for the men.

Water and coal carrying capacity.

All these items and more should be considered.

A careful study of conditions may mean larger profits.

Our experience may be valuable in considering them.

A dollar saved is more than a dollar earned.

Write or wire us, or better still, come to see us.

**MONTREAL LOCOMOTIVE WORKS, LTD.**

Dominion Express Building, MONTREAL, CANADA

## Makes It's Mark Vivid and Lasting

Marks that remain vivid and wear like iron are a real satisfaction to the man who handles lumber. The metallic pigments, like graphite, of DIXON'S LUMBER CRAYONS offer marvelous resistance to all kinds of weather conditions. Their marks are often visible after six months of severe exposure to sun and storms.

### DIXON'S LUMBER CRAYONS

have always remained the recognized standard because of their one, uniform and dependable quality; their convenient and uniform shape and size and because of the careful selection of materials used in their manufacture. DIXON'S LUMBER CRAYONS are made in nineteen grades and colors, including black (six grades), red (two grades), blue (two grades), green, white, yellow, brown, terra cotta, violet, pink and orange. Some are made to fill particular needs—let us tell you more about them. Get acquainted.

Write for lithographed booklet No. 239, illustrated in colors.

Head Office, Saginaw, Michigan, U. S. A.

# The Popular Jumbo Edger

The Jumbo combined gang and Edger is one of the most popular pieces of saw mill machinery that we manufacture, and we have some very flattering recommends for it.

12 saws are used on the machine, 8 on the gang side and four on the edger part. "Jumbo" will rip up cants to 8 inches thick and it is impossible for a cant to fly back. Reverse friction is supplied in case cant binds and this prevents saw from being burned.

Let us quote you on saw mill equipment and repairs.

**W**ATEROUS Steel Carriages are being used in the largest, best equipped Mills in Canada to-day. Built for fast cutting, for accuracy, and to give operating service, they are carefully put together of the best materials obtainable—they stay right.

**I**NCREASE in cutting efficiency and the increase of cutting speed have been taken care of in the design of these Carriages. Improvements in the knee and head blocks and in all moving parts to overcome lost motion; a new Setworks—our No. 4—which absolutely prevents and will not develop slack; new style, inserted tooth, quick and easy operating dogs; a friction receder that

is operated with the Setworks—these special features are what keep the Waterous Steel Carriage at its place at the head of the list of "Up-to-date Sawmill Equipment." We build our Steel Carriages in sizes of 36" to 72" knee opening, in any length and with any number of head blocks—screw or rack motion. They are adaptable for rope or gunshot feed.

# Fully Guaranteed Sawmill Machinery

This is the only kind for you to buy to ensure satisfactory and continuous operation throughout the entire sawing season.

All our sawmill machinery is sold on an absolute guarantee of proper operation and perfect construction.

Naturally, therefore, we buy only the highest grade materials and use only skilled workmen, and everything is built under the most careful supervision.

These things are necessary to produce well built machinery, but they would be useless without proper design—and the “know how” of designing sawmill machinery can only come after long experience.

We have such complete confidence that our machinery is correctly designed that our guarantee is:

**“These machines are guaranteed against defective materials and workmanship for the period of one year, and their proper and successful operation is also absolutely guaranteed. Should any parts fail through defects, we will replace them free of charge, or should any machine not work properly, we will remove it at our expense and refund any part of the purchase money which may have been paid to us.”**

This guarantee goes with all our machines and we have never had to take back a standard machine yet.

And back of this guarantee is our fifty years' experience building sawmill machinery for stationary mills only.

It will pay you to buy your machinery from us this winter.

**William Hamilton Co., Limited**  
Peterborough, Ontario

VIEW OF OUR MILL AT CACHE BAY, ONT.

# CHOICE PINE

Lumber buyers who come face to face with the consuming public are to-day experiencing a demand for quality products that we anticipated a good many years ago.

Our first move in the production of Pine Lumber was the acquisition of a good supply of timber—not only a good quantity, but particularly a good quality, and the best proof we can offer you of our success in the selection of this kind of timber is found to-day in our

## Don't Hesitate

You know the old proverb "He who hesitates is lost"—Well, of course, we know that that is contradicted by the just as old proverb "Look before you leap"—The logical conclusion therefore is—"you can't do both." But that is just the trouble with many business men. They take a good look and then they hesitate. There is no need to hesitate in deciding where to purchase

## Hemlock, Pine and Hardwood

You are quite safe in coming to us—we will give you the best on the market at the right price.

Write us for quotations—take a good look at our proposition then send us your order at once. Don't Hesitate.

# First Class Opportunity to Buy Standing Timber and Mill Machinery

## CHEAP

The undersigned offer for sale in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; Tug Scow and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

Tenders will be received up to March 15th for the purchase of the following Sawmill Machinery:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.  
1 3-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 16-ft. Slash table.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

### FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Automatic Machine for circular saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

### POWER PLANT

1 24 x 36 Slide Valve Engine with 40-in. x 12-ft. extra heavy double arm split fly wheel.

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Wood Machine for 16-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and rails and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

The lowest or any tender not necessarily accepted.

All of the above open for inspection at Parry Sound.

Messrs. Canada Lumberman & Woodworker,  
 Board of Trade Building,  
 M o n t r e a l.

Dear Sirs:-

Enclosed herewith is a renewal full page advertisement-in-Canada Lumberman & Woodworker, for another year.

In this connection we are pleased to be able to say that we have found this paper a splendid medium for advertising our various goods.

We have largely increased our trade with Saw Mills, Woodworking Plants, and Pulp and Paper Mills, during the past year, and we consider that the Canada Lumberman & Woodworker has been of great assistance to us, in securing a large volume of this business.

With best wishes for your continued success,  
 we beg to remain

Yours faithfully,

S A D L E R & H A W O R T H.

## Hanchett Automatic Gang Saw Sharpener

The Hanchett Gang Saw Sharpeners have the same general features of construction as the Hanchett band saw sharpeners including the direct belt drive for the emery-wheel arbor, sliding gear transmission with variable speed of feeding saw, adjustable cam, beveled gibs of head for taking up wear, improved feed finger construction, forked feed arm connections, etc.

The saw carriage runs on dust proof ways, and the tension of the carriage in its bearing on the carriage track or ways is adjustable and so arranged that by raising the lever at the left end of the carriage, after grinding the last tooth at the end of the saw, the tension is removed so that the weight returns the carriage to the starting point without effort on the part of the operator, thus giving perfect control of the carriage and enabling very rapid and easy operation, as the carriage returns itself when the lever is raised, without requiring the operator to pull back the weight of the carriage. The clamp for holding the saw is locked in place by a lever at each end, which insures that the saw shall be held rigid the entire length and will not spring at either end, and the clamp opens down so that the saws are easily removed from or placed in the carriage. The head is raised by a foot lever as shown in the cut (or by hand lever if preferred), which at the same time raises the feed finger out of the throat of the tooth to permit the return of the carriage.

*Unquestionably this is the greatest Gang Grinder ever built.*

*Built for all size gang Saws.*

*Write today for our No. 5 catalogue.*

# A Belt which Conveys ALL the Power

Practical men know the drainage of power from a slipping belt, *and because they know*, they are buying

## GOOD YEAR RUBBER BELTING

### Which Neither Slips Nor Stretches

It is built up, layer upon layer, of close-woven, long-fibre, cotton fabric, rubberized and cured under Goodyear processes. And every Goodyear belt has in it the lowest possible minimum of stretch, because the belt is "cured" whilst stretched to the limit of safety in a special machine.

#### That is the Goodyear Method of Belt Manufacture

And the result is entirely satisfactory to belt users—a fact to which our enormously increased sales testify. What is the significance of this **CONTINUED SALES INCREASE — 50%** over last year? Simply that Goodyear Belting more than fulfills the claims made for it by the

Goodyear people—who know what a belt should do, and make a belt to do it.

It has cost us less than \$200.00 for claims or adjustment of every kind in connection with our total output for the past two years—a remarkable tribute to Goodyear reliability.

#### Look into the Belt for Yourself—Try to Tear It Apart.

Make a cut in the top layer—and then try to pull it apart. You will get a faint idea of its strength.

That is the result of forcing rubber at tremendous pressure through the fine cotton fabric—separating every strand—thus abolishing all internal friction or grinding. Whilst these layers of fabric are afterwards so compressed as to be almost homogeneous, the finished belt bends easily, the "duck" being so woven as to retain complete pliability in the finished belt.

### For Main Drives and High Speed Pulleys GOODYEAR Belting is the Best

It has all the tensile strength necessary to absorb tremendous strain without slip, stretch or rent. The grip of rubber and the prodigious strength of hard-twist cotton fabric are united, and prove equal to every emergency.

Where the power transmitted is high, and great tensile strength is essential, Goodyear Rubber Belting proves its worth.

EVERY GOODYEAR BELT IS SUB-

JECTED TO A STRINGENT TEST BEFORE LEAVING THE FACTORY, and what is more, the materials used in the manufacture are also tested in the Goodyear laboratory before using.

#### IF YOU USE A BELT AT ALL IT WILL PAY YOU TO USE A GOODYEAR

Loss of power is loss of profit—and an inferior belt is dropping power all the time. Goodyear belting quickly earns its cost in power saved and trouble avoided.

#### TWO HUNDRED AND FORTY ROLLS—A TOTAL OF 72,000 FEET

We have just received an order for this quantity of GOODYEAR RUBBER BELTING from one business concern in the west, for the equipment of interior elevators. Such an order shows supreme confidence in the quality of GOODYEAR Belting.

If we have not just the belt you require we will make it for you.

In the choosing of belts our booklet would be of great assistance to you. We supply it free. Write to our nearest Branch for one.

## TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, \$2.00 per year in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Toronto, February 15, 1913

No. 4

## Quebec's Pulpwood Situation

Developments have come rapidly of late in connection with the Quebec pulpwood situation. The value of the pulpwood resources of Quebec must be greater than a good many people imagine, when the Governments of the two countries and the producers and consumers of paper have permitted themselves to be drawn into a controversy of no mean proportions as to who is to get the benefit from them. Canadians have an idea that the natural resources of Canada belong to them and that if they choose to prohibit their export in anything but a manufactured state, that is their own business. In the end the people of the United States are likely to find out that this is really the key to the situation, but in the meanwhile there is no reason why they should not have a good tussle among themselves as to whether they shall pay the cost of production for Canadian pulp and paper or the same with an import tax added. Unquestionably the time is approaching rapidly when it will be of no importance to the Canadian manufacturer of pulp and paper whether the Government of the United States taxes their product or not. The market of the United States is becoming more and more dependent upon Canadian supplies.

So far as Canadians are concerned one of the most important effects of the agitation has been the proposal for the formation of a Canadian Pulp and Paper Men's Association, somewhat along the lines of the United States Association. A prominent Quebec manufacturer of pulp and paper discussing the situation recently said:—"I am satisfied that Washington will eventually accept the contention of the Quebec paper men. It has already admitted the paper of the Powell River Pulp & Paper Company of British Columbia, and, having this precedent, it cannot very well refuse to accept paper removed of all restrictions from the Province of Quebec. There is this difference, however: Mr. Nelson, head of the Powell River Company, was an American manufacturer who built the mill for the express purpose of supplying American paper needs, and there is also the fact to be considered that there are very few mills on the Pacific slope,

while on the Atlantic side there are too many. Naturally, if the limits are free from all restrictions, the Americans must admit it duty free, as it comes under section 2 of the recent agreement. I am of the opinion, however, that Sir Lomer Gouin will remove all the restrictions and throw the forests of the Province open to all comers. This undoubtedly would be bad for the Province, and would defeat the object he had two years ago, when he placed his embargo on wood cut from Crown lands. Ontario is also vitally concerned in this question, as it has now an output of 720 tons of news print per day. Had that Province been consulted there is no doubt but that Sir Lomer Gouin would not have acted as he did. This present action points to the need of an organization among the pulp and paper men of the Dominion. I think that will be one of the outcomes of the present controversy."

In the above connection it is interesting to note a recent utterance of Hon. Jules Allard, Acting Premier and Minister of Lands and Forests for Quebec. Hon. Mr. Allard has announced that any company manufacturing pulp and paper in the province will be accorded the privileges already granted to the four companies at present manufacturing pulp and paper from Crown Lands in Quebec.

## The U. S. Lumber Tariff

The situation in connection with the tariff on lumber entering the United States has not been altered during the last fortnight, but a great deal has been said by those in Canada and the United States who are interested in the subject. In Canada it seems to be very generally believed that the duty will be removed and any discussion upon the subject is confined to a consideration of what the effect upon Canadian trade will be. The question has been discussed so often editorially in these columns that, at the present stage, readers perhaps would like to have the views of a few of the prominent members of the trade rather than those of the editor.

John Hendry the well-known lumberman of Vancouver, B.C., is well qualified to express the general opinion of the people of western Canada. Here is what he had to say when asked for his views on the subject:—"I really do not see that it would have much effect, so far as British Columbia is concerned, with the one exception of shingles. If the duty of 50 cents per thousand were lifted from shingles, the effect would undoubtedly be beneficial, and would lead to a great expansion of trade between the two countries. But as regards other lumber the general opinion of western lumbermen is that the abolition of the tariff wall would have little or no effect.

"The conditions of the industry in the two countries, so far as the West is concerned, are almost identical. The rate of wages is the same; it costs the American as much to manufacture as it costs us, and vice versa, and thus there would be no appreciable benefit, at present at least.

"It might be, of course, that conditions would change, and that we on this side of the line would benefit much more than we now anticipate; but at present there does not seem to be any indication that free entry of our lumber into the States would be of any great advantage. It would be a good thing, of course, and I believe it is sure to come, the Democrats being so definitely pledged to the step.

"It is amusing to read some of the complaints being presented to the committee at Washington by the American lumbermen. To read them one would think that our scale of wages was very much lower, and that all our conditions of development were easier than they are in the States; while the truth is that, taking Canada as a whole, the rate of wages paid is as high as in the States, on a general average, and we are obliged to observe restrictions and to work under conditions which are absent in most of the States.

"We would welcome the removal of the duty, on the principle that, instead of the jug being one-handed, as now, it would be without any handles at all. We have contended all along that if there is to be any handle to the jug, there should be two, and unless the American duty is removed, we will continue to advocate the placing of a Canadian duty upon American lumber which shall be equal to that charged by the States upon Canadian lumber. Fair play is bonnie play. We have been handicapped too long, and we are entitled to fair play; that's all we ask. If the Americans remove their duty, we will be

satisfied, but if they do not do so, we shall not be satisfied until the Canadian duty is made the same as that charged by our neighbors."

In Eastern Canada, lumbermen are not discussing the question with much interest. If the duty is lowered they will be able to do a larger business in the United States. Whatever comes about they will be none the worse off than at present. The pulp and paper interests however, are keenly interested. The tariff situation in connection with their industry has been greatly complicated by recent events in Quebec and the action of the United States Congress in connection with the duty on these articles will be of great importance to the industry of Quebec. It will have much to do with the success or failure of the Gouin policy in connection with the prohibition of the export of pulpwood.

The views of a prominent lumber and paper manufacturer in Quebec, upon the subject, are outlined in the following statement:—"In regard to lumber, I think that the Canadian mills will save the greater part of the duty. There is not sufficient lumber in the United States market from Canada to materially effect the New York market price, and for this reason the Canadian lumbermen will save \$1.25 per thousand feet that is charged; that is to say, at present they are obliged to sell their lumber \$1.25 per thousand cheaper because of the duty."

"In regard to the proposed changes, the present paper and pulp, particularly newspaper, escapes duty when manufactured from private land, or when bought from farmers. As 80 per cent. of the pulp manufactured in Canada is from public lands, it can be seen that the pulp and paper mills, in order to escape the duty going into the States, must get their wood for this paper from private lands. If this

restriction is removed, it will mean a great boon to the Canadian pulp companies, and they will be in a position to handle the business, for during the last year considerable additions have been made to the mills in Canada, in this Province particularly, and the great danger now is over-production. At present, the mills have great quantities of pulpwood stored away. This is a factor which will prevent the prices in Canada for pulp and paper from advancing to the home consumer."

"The Canadian position is secure. The United States cannot increase their duties, but must lower them, because of their dependency on Canada for the raw material. They get 1,000,000 cords of wood annually from this country, and 250,000 tons of ground wood pulp, and 40,000 tons of chemical pulp, and 100,000 tons of newspaper pulp. The United States imports from Europe 400,000 tons of chemical pulp, but no pulpwood whatever."

Prominent lumbermen who attended the convention of the Canadian Lumbermen's Association in Ottawa recently, were nearly all agreed that the removal of the duty would not make a great deal of difference to the Canadian lumber trade in eastern Canada, although it might cause a slight increase in the value of Canadian timber limits. C. Jackson Booth, of J. R. Booth, expressed his views as follows:—

"It will make a difference with the lower grades of lumber. The shingle trade ought also to be benefitted. But as regards the higher grades of lumber I do not think it will make much difference. You see, the Canadian lumberman who exports to the United States does not pay the duty so that the removal of it will affect the consignee more than the shipper and will make more difference to the United States than to us."

## The United States Tariff Situation

During the recent taking of the evidence by the committee of Ways and Means of the United States House of Representatives, one of the witnesses Mr. Z. W. Whitehead of Wilmington, a United States lumberman, made an astonishing declaration upon the situation. In the opinion of many lumbermen both in Canada and the United States Mr. Whitehead's assertions will be considered as an admission of a hopeless situation rather than as a sincere description of the facts. Indeed Mr. Whitehead's statements took on the appearance of comedy more than of the tragedy he tried to depict. As an example of the extremes to which partisans will go in upholding their own interests we publish Mr. Whitehead's statement as follows:—

"Around the hearthstone and firesides of the hundred and one humble cottage homes and hovels surrounding the innumerable saw and planing mills from one end of this country to the others are hundreds and thousands of honest yeomanry earning their livelihood by sweat of their brow, with five times as many helpless women and little children dependent upon them, in blissful ignorance of the far-reaching and disastrous results of this impending danger now hovering above their heads.

To take advantage of them in their innocence and solitude, denied as many of them are, of the blessings of society and other advantages so common to most of us, and directly or indirectly rob them of the food with which their mouths are fed and the raiment with which their bodies are being clothed, while in the discharge of their duties, would be a crime against humanity, a sin in the sight of God, and constitute an act of bad faith that would bring down upon the heads of those responsible for all such, the curse of not only the present, but generations yet unborn.

Indeed, if it developed a school of anarchists and socialists such as began the great crusades of the past which finally resulted in the overthrow of whole empires and kingdoms, no one should be surprised for it would only be a case of history repeating itself, sowing the winds and reaping the whirlwind.

What has the reduction of the duty accomplished? I will tell you. It has enabled the Canadian members to supply American markets in part substituting Oriental labor for American labor, foreign capital for American capital and in various and sundry ways fattened and prospered upon American industries to the detriment and loss of American interests. This is what it has accomplished and this much will be multiplied in behalf of Canadian interests if you repeal the present duty."

Canadians are watching this situation with great interest. The removal of the duty of \$1.25 a thousand feet upon lumber entering the United States would be welcomed by many lumber producers in Canada inasmuch as it would widen the scope of their markets and would give them some measure of compensation for the free entry of

American rough and partially dressed lumber into Canada. Generally speaking however, Canadians will take a non-committal view of the situation accepting without comment any concessions which are made in the way of reduced tariff, but at the same time realizing that to a certain extent the interests of Canada in general may not be entirely promoted by conditions which encourage the more rapid conversion of their timber resources into finished products. The question of preserving the timber resources of Canada is already one of serious difficulty and the admission of Canadian lumber into the United States free of duty will not assist in the solution of the difficulty although it may stir up those who are in authority to take more immediately effective measures along the lines of conservation than they would otherwise take.

Much the same situation is developing in connection with pulp and paper in the United States and Canada. This situation has been frequently outlined in the Canada Lumberman and it is sufficient at this stage to remark that Canada's actual resources in pulpwood may not in the end be found to be so enormous as recent events might lead the public to believe. Nevertheless, Canadians in general will be pleased if the result of present developments is that in the markets of the United States, Canadian manufacturers are able to dispose of a finished product such as pulp and paper, which has given employment to many Canadian citizens, rather than a raw material such as pulp wood, in the production of which very little Canadian labor has been a factor.

An interesting side light upon the whole tariff situation is provided by the efforts which are being made by Canadian lumbermen to secure the inclusion of rough lumber which has been "sized," in the dutiable list. This situation has also been outlined frequently of late in the Canada Lumberman and it is of interest to note that in British Columbia lumbermen were recently reported to be behind an effort which is to have the wording of the tariff act altered so as to include this class of lumber which many believe was really the intention of the original framers of the act. Later information would suggest that the lumbermen of Canada in general, will not push their case any further until the United States tariff uncertainty has been settled.

## An Unfavorable Winter in the Woods

Recent reports from Halifax give reason to fear that the logging operations in Nova Scotia during the present winter will be very unsatisfactory. The soft weather continued up to the beginning of February, and another month of it would result seriously. Cutting was then completed and everything ready for the hauling, which could not be commenced, on account of the mild weather. In addition to reducing the output, the cost of operation is being increased by the difficulty in logging. Not only is labor more expensive than formerly but on account of the soft conditions in the woods, it is much less efficient. The mild weather has had a bad effect also upon the health of the men in the woods and reports are numerous of serious outbreaks of gripe. A despatch from Halifax reports that higher prices are to be expected for the above reasons. The English market is exceptionally good for this time of year, but Nova Scotia operators will probably need a very satisfactory market in order to offset the losses and difficulties which they have had to face.

A further difficulty as a result of the mild weather, is feared in connection with the volume of water which will be available for the spring freshets. Recent reports state that the freshets are likely to commence very early and be finished before the logs can be brought out of the woods. During the early part of the present month a cold snap arrived and the conditions outlined above were dispersed for a time. It is impossible however, to say how long the improvement will last.

Nova Scotia is not alone in its difficulties on account of the mild weather which has prevailed during the present winter. Reports from New Brunswick state that mild weather prevailed until the 1st of February in practically all parts of the province although some snow and frost was reported from northern New Brunswick. In

southern New Brunswick there was practically no snow up to that date and many of the men had to come out of the woods. The average temperature for January, 1913, according to the provincial meteorological bureau was higher than it had been for 39 years during the same month.

In Ontario the weather conditions up to the 1st of February were also exceptionally mild and much anxiety was expressed by lumbermen from all parts of the province about the possibility of bringing out logs during the present winter. During the first week in February however, a cold spell occurred which was general throughout the province and many lumbermen reported that their hauling operations had got well under way. A number of operators of the Ottawa Valley and some from the Georgian Bay district report that they believe they will be able to get out a satisfactory quantity of logs, this, of course, depending upon a continuance of the cold weather. A number of the operators however, were of the opinion that the cold spell could be depended upon to continue long enough for hauling purposes.

A curious reversal of the usual weather conditions is reported from British Columbia. At New Westminster however, the cold weather during the month of January resulted in the closing down of the majority of the mills on the Fraser River, which as a rule are operated throughout the winter. The Fraser River was so full of ice at the end of January that it could not be used for moving log supplies to the mills at its mouth. Mill owners estimate that the cold snap will cost them many thousand dollars. Nearly 1,500 men were reported to have been temporarily thrown out of employment by this situation. The north arm of the Fraser River was completely frozen over and the Canadian Western Lumber Company together with the mayor of New Westminster found it necessary to apply for the services of an ice breaker to open a passage for logs.

## Editorial Short Lengths for Busy Readers

The United States Forestry Department will conduct the largest sale of government timber ever held in the northwestern States, on April 1st, when it will dispose of 267,000,000 feet of saw timber in the Kauikan forest, eastern Washington. The timber will go to the highest bidder. At the same time there will be a sale of 190,000 cedar poles. The minimum price that will be considered by the government will vary from \$1 to \$5 per thousand feet. The government expects to net over \$1,250,000. Bids for the lumber are being received by the forest supervisor at Newport, Wash., and by the district supervisor at Missoula, Mont. More than twenty-five different companies have already submitted applications for sections of the timber. It is expected that a number of new sawmills will be built as a result. Bidders for the timber are required by the government to submit with their offers a statement of the proposed methods of logging and development, which will be considered in awarding the timber. About 55 per cent. of the timber or some 150,000,000 feet is high class white pine, the balance being about equally divided between yellow pine and Englemann spruce.

A Vancouver report says: With the midwinter falling off in domestic business lumber manufacturers on the coast think more of importation from the United States. About 10,000,000 feet more came in during the last year than the year previous, and the figures show that the price has not been as high. Were the price maintained conditions would not be so bad, but when the lumber is dumped the Canadian market is demoralized. Local trade is the mainstay at this time of year. It is fully up to the mark of 1911, though during 1912 more skyscrapers were erected. While these call for a certain amount of lumber, it is in many instances not local, hardwoods largely entering into the floors and finish of the big blocks. Construction is mostly steel and concrete, so that big timbers are not used as formerly. Permits for 1911 totalled \$17,000,000, and for 1912 they were about \$20,000,000, the amount predicted by the city building inspector at the beginning of the year. Building has been extensive also in New Westminster and Victoria.

Conditions generally have been excellent in British Columbia. In some respects the year has been the best yet. The two great industries, on which the prosperity of the province depends, were never in better shape. The lumber industry has enjoyed the best year in its history. The year before last a slump started when the announcement was made that damage had been done to the wheat crop in the north-west. This was not the only discouraging factor, as the foreign trade at that time was slack. Early in 1912, business bettered, and for the last six months it has been all that could be desired. Foreign trade is better than for years, local demand is strong and domestic requirements are great. Prices are firm, which means general satisfaction. This has meant several new sawmills, a feature of these being the number of smaller plants, cutting timber which before was passed over. There have been several large expenditures, among them being half a million in additions by the Canadian Western Lumber Company on the Fraser River, which is erecting a new mill at Comox and a cedar plant near its present large mill; \$250,000 by the British Canadian Lumber Corporation, which has built a new and third mill on Lulu Island at New Westminster; and the large expenditure proposed by the Canada United Lumber Company, which was organized with a capital of \$4,000,000, and took over the holdings of Mr. James C. Shields with the intention of constructing new mills. Some very fine timber is to be found on Vancouver Island, and the Empire Lumber Company, with holdings in the vicinity of Cowichan Lake, was one of the year's incorporations with a capital of \$7,500,000.

New Westminster benefits largely from the operation of sawmills, and its location on the Fraser River also gives it advantages as a place for factories to locate. When the big schemes of improvement on the Fraser River are consummated it will mean much to the Royal City.

The question of the disposal of forest slash is occupying the attention of D. R. Cameron, of Kamloops, B.C., who has decided to make an extensive tour through Montana and Idaho for the purpose of studying the systems now in vogue in those states.

# Record Meeting Canadian Lumbermen

**Annual Gathering of C. L. A. at Ottawa Attended by Many Representatives From East, West, and Centre of Canada—Alex. MacLaurin, Montreal, Re-elected President**

The fifth annual meeting of the Canadian Lumbermen's Association was held at Ottawa, on February 4th, at the Chateau Laurier and was unquestionably the most successful and interesting annual meeting which has ever been held by the Association. The attendance was exceptionally representative and large. Those who were present took a keen interest in all the proceedings and discussed in full many of the important problems with which the trade and the association are at present confronted.

In the morning the meeting was devoted to the reading of reports by the various committees and officers of the Association and to a short discussion upon one or two questions of importance. The President of the Association, Mr. Alexander MacLaurin, Montreal, was unfortunately unable to attend the meeting as the result of ill health. In his absence the chair was taken by Mr. J. C. Browne, of Ottawa.

The first report presented at the meeting was that of the President, Mr. Alexander MacLaurin, who, during the course of his report stated that the total trade of Canada, imports and exports, during 1912, was nearly \$1,006,000,000; whereas for the same period ten years ago the corresponding total had been \$424,000,000, showing a gain of a great deal more than double during the ten years. He remarked however, that during 1912 Canada's imports exceeded her exports in value by \$53,000,000. After referring to other interesting statistics regarding the commercial and financial development of Canada, the report stated that so far as the shipments of lumber were concerned the tonnage increased during 1912 over 10 per cent., as compared with 1911. Considerable increases were shown in the quantity of exports of lumber to the United States, but the value was less than in former years. This might be accounted for by the fact that lower grades had been shipped more largely than usual during 1912.

Imports from the United States, of boards, planks, deals, joists, and scantling showed tremendous increases as compared with two years ago. For eleven months ended November 30th in each year the figures were as follows:—

|            | Feet        | Value        | Aver. Price |
|------------|-------------|--------------|-------------|
| 1910 ..... | 273,881,000 | \$ 7,020,665 | \$25.63     |
| 1911 ..... | 476,943,000 | 10,034,815   | 21.04       |
| 1912 ..... | 519,781,000 | 11,831,115   | 22.76       |

or, nearly 90 per cent. increase in quantity in two years. Almost one-third of the lumber exported from the United States was pitch pine.

Dealing with the political situation in the United States and its possible effect upon tariffs the report said that it was apparently part of the Democratic platform to admit lumber into that country free of duty. It remained to be seen what effect this would have from a

Canadian point of view. The effect of the entry into Canada free of duty of lumber dressed on one side had been disastrous to the lumbermen in western Canada.

The report referred feelingly to the loss which the association and the lumber trade had sustained by the deaths of H. F. McLachlin, of Arnprior, Ontario, on September 13th, 1912, and Otis Staples, of Wycliffe, B.C., on August 9th, 1912. Similar reference was made to the death of Judge Mabey, Chief of the Dominion Board of Railway Commissioners, on May 6th, 1912.

Referring to the outlook for the future the report stated that the prospects at present were very bright and that the trade might look forward to the year 1913 with hope and encouragement.

The report of the secretary stated that the association was commencing the year with 125 members. Each of these members should not only stick by the association but should make it a personal matter to add materially to its numbers. Mr. John Hendry, Vancouver, B.C., one of the directors of the association in a letter to the secretary had written as follows: "I think that Manitoba and Saskatchewan should have more members, and Alberta should have a good number. I am of the opinion that if they were approached by some interested party each of these provinces would show a goodly number of members."

The secretary referred in conclusion to a number of questions which were taken up in subsequent discussion or in other reports. One of these was the matter of the variation in discounts. Another was the proposal to discontinue the stop-over privilege in Canada on lumber coming from the United States. The secretary also drew attention to a matter relating to insurance on lumber which is of considerable interest to manufacturers, wholesalers and retailers. All Ontario members were interested in a technicality which had been raised with regard to the insurance on lumber which had been sold and paid for but not removed. In all cases where the seller guaranteed to hold the buyer covered, unless there was a distinct clause in his policy permitting him to carry the risk on behalf of his customer the insurance of such property was void. The secretary also drew the attention of the members to the fact that all insurance carried in unlicensed companies, Lloyds, mutuals or reciprocals must be reported to the Dominion Department of Insurance, on special forms which would be supplied upon application to the Department not later than March 1st next. Heavy penalties were provided in case of non-compliance.

## The Financial Statement

The Honorary Treasurer, R. G. Cameron, Ottawa, in his report stated that the association commenced the year 1912 with \$534.83 on

J. L. Campbell, Toronto

Alex. MacLaurin, Montreal, Re-elected President

R. G. Cameron, Ottawa, Re-elected Treas.

C. A. Larkin, Toronto

Arthur H. Campbell, Montreal

Wm. Power, Quebec

D.H. McLennan, Westmount, P.Q.

hand and closed it with a balance of \$80.41, showing that the income for the year had not been sufficient to meet the necessary expenses. A careful estimate for the coming year indicated that they would require an income of \$4,000. The drop from \$50 to \$25 in the subscription for membership had proven too drastic. If the subscription were to be made \$35 instead of \$25, sufficient revenue would be provided upon the present membership basis for the expenses of the year 113.

#### Executive Committee's Report

The report of the executive committee referred in opening, to the probability that the United States Government would remove the duty upon lumber entering that country, and drew attention to the fact that Canada imported from the United States, lumber planed on one side, free of duty, to the value of nearly \$1,000,000 a month.

Attention was drawn to the fact that the movement for placing a duty upon "saw blanks" had been opposed successfully. An important event during the year had been the application of the Ontario Salvage Company for incorporation, for the purpose of raising sunken logs. This proposition had also been opposed successfully, as it was felt that the interests of lumbermen in all parts of Ontario might be prejudiced.

The amendment to the criminal code giving protection to lumbermen on the British Columbia coast against the depredations of log pirates was reported to have had an excellent deterrent effect.

The committee on uniform grading had concluded during the year that the possibility of arriving at a uniform rule for the grading of lumber in Canada seemed to be indefinite if not impossible. No action had therefore been taken in regard to this matter.

The trade report branch now had on file some 130 records of firms reported upon. A revision of the detail work in connection with this branch was under consideration, for the purpose of securing fuller reports and reducing the work involved in giving information. The committee laid stress upon the necessity for co-operation between the association and its members for this work.

The claims branch reported that it had been successful in collecting a number of railroad claims and claims against delinquent debtors. "It is no exaggeration," said the report, "to say that the railways undoubtedly have upwards of \$1,000,000 of money belonging to the shipping public, of which

Gordon C. Edwards, Ottawa

Senator Geo. Gordon, Cache Bay, Ont.

they have the use continuously without payment of interest." The association ought to take steps to remedy this serious situation.

#### Transportation Committee's Report

The report of the transportation committee outlined the events leading up to the recent order of the Dominion Board of Railway Commissioners, increasing the charge for demurrage on freight cars. If this increase was fair and if such a penalty upon shippers and consignees would relieve the car

Group of Prominent Canadian Lumbermen in attendance at C. L. A. Annual Meeting, Ottawa, February 4th, 1913

shortage, was it not logical that the railways should be penalized in the same way for their failure to furnish cars or expedite shipments. Attention was drawn by the report to the request that all members of the association should keep accurate records of their car transactions between December 15th, 1912, and March 31st, 1913, the period covered by the order. This information, forwarded to the secretary of the association, would be of great value in preparing a case for submission to the board when the question of reciprocal demurrage was taken up.

The Canadian Freight Association was reported to have made another application for permission to do away entirely with all track scale allowances leaving the question of allowance in the hands of the weighman. This was a serious matter for lumber shippers and would mean largely increased takings by the railways if it were put into effect.

Attention was drawn to the effort of the railways, early in 1912, to increase the charge for stop-off privileges to 2c per 100 lbs. instead of 1c. Objection had been taken to this and a satisfactory arrangement had been reached.

Similar objection had been taken to a proposal to increase the car load minima. The railways wanted the following rule adopted:—cars 35 feet and over 40,000 lbs.; cars under 35 feet, 35,000 lbs. This was to take the place of the following rule:—cars under 36 feet 6 inches inside measure, 30,000 lbs.; cars 36 feet 6 inches to 40 feet 6 inches, 36,000 lbs.; with an increase of five per cent. per foot on cars larger than 36 feet 6 inches. The railways agreed to the following minima:—35 feet and over, 34,000 lbs.; under 35 feet 30,000 lbs. The railways, however, incorporated with this the following:—“cars 35 feet and over 34,000 lbs. (subject to rule 1, section B, Canadian classification).” This rule provided for a minimum of 36,000 lbs. on cars 36 feet 6 in. to 40 feet 6 inches long, and a five per cent. increase for each foot on cars over 36 feet 6 inches long. Strong objection was taken to this on behalf of the lumbermen. The railways, however, remained firm and no further progress had been made. The tariffs as filed did not comply with the arrangement made at the conference but they were now in effect.

The report mentioned the recent developments in connection with the freight rates on lumber coming into Canada from the Southern States. The association had filed a protest against the proposed increases, as they would mean a serious dislocation of business. This situation accentuated the necessity for a joint traffic board representing Canada and the United States for handling questions of international importance.

The report concluded with a reference to the effect that the C. P. R. and the G. T. R. had field tariffs cancelling the stop-over arrangement in Canada on lumber coming from the United States. If this change were made it would mean a loss to many of the members of the association, the report advised that they ought to take immediate action regarding it.

#### Resolutions Carried

A number of resolutions were submitted by the committee on resolutions and were taken up in their order by the association. A resolution moved by Duncan McLaren, Toronto, seconded by A. H. Campbell, Montreal, was carried empowering the Transportation Committee to act in the matter of car-demurrage as seemed to them best in the interests of the association; and if found advisable to work in conjunction with the Canadian Manufacturers' Association; the various boards of trade and other associations interested therein.

A resolution moved by J. B. White, Montreal, seconded by A. E. Craig, Toronto, was carried, to the effect that the Association was absolutely opposed to any change being made in the allowance from track scale weights, for variation in tares of cars, as in effect at the present time; further that the association considered the present allowance fair and just; that without it shippers would suffer severe loss, while their continuation meant no hardship or injustice to the carriers. In the event of further action being necessary the Transportation Committee was empowered to take such steps as it considered in the best interests of the association.

A lengthy discussion took place upon a resolution moved by Geo. Grier, Montreal, and seconded by H. B. Poliwska, Quebec, to the effect that the Executive Committee should be empowered to carry on, in the best manner according to their judgment, the work of the trade report branch of the Association. Much of the discussion centred upon the form of blanks sent out by the secretary for information.

Mr. John Donogh, Toronto, said that he thought a better form of blank could be designed containing fewer questions, and these questions framed so as to secure general information.

The secretary explained that the incoming committee would have a recommendation along this line. A list of questions had already been prepared, each of which was numbered, and a printed postcard had also been prepared with corresponding numbers upon it. It would simply be necessary for members sending in a report to put a mark opposite the different numbers on the postcard corresponding to the questions in the printed form. In this way the information could be given in a thorough manner and in entire secrecy. This plan would also involve very little time on the part of the member reporting.

After further discussion upon this point Mr. E. F. Perry, Secretary of the National Wholesale Lumber Dealers' Association of the United States, explained how useful the trade report branch of that association had become and what an up-hill fight it had been to secure the extensive co-operation of members. He explained in detail the method of working adopted by his association and showed that it was similar in practically all respects to that of the Canadian Lumbermen's Association. He believed that it was necessary for the association to ask for information upon many points which might appear to members to be difficult to answer, but that, in the course of time, with the co-operation of the members, the association would be able

to build up a trade report branch which would be of the greatest possible value to all members.

#### Claims Branch to be Started

A resolution moved by Duncan McLaren, Toronto, and seconded by E. R. Bremner, Ottawa, was carried, empowering the Executive Committee to inaugurate a claims branch of the Association.

A resolution was introduced for discussion without any mover or seconder, to the effect that it would be expedient to establish a uniform rule for discount for cash. After a very brief discussion it was very plainly shown that such a proposition would have very little chance of being successful and the motion was accordingly withdrawn.

A brief discussion took place upon a resolution proposing to increase the annual subscription fee of the Association. The resolution was moved by J. G. Cane, Toronto, and seconded by A. E. Craig, Toronto, to the effect that as the subscription fee of \$25 during 1912 had not furnished sufficient revenue, the fee should be made \$35 per annum; also that the trade report branch should be continued and the claims branch inaugurated without any additional charge being made. There was a slight difference of opinion upon this subject, some members believing that with an increase of membership during 1913 similar to that of 1912, the necessary funds would be secured. It was pointed out however, that the increased membership would entail proportionately increased expense and that the sum of \$25 per member would scarcely meet the outlay. The resolution increasing the fee was therefore finally carried.

A resolution introduced by Walter C. Laidlaw, Toronto, seconded by R. G. Cameron, Ottawa, was carried, to the effect that the Executive Committee should consist of three members having their residence in Ottawa, and two from some outside point. When the officers were appointed later on it was deemed sufficient that two of the directors should be from Ottawa with a third from Braeside, who visits Ottawa upon business nearly every week.

Votes of thanks were passed to Mr. R. G. Cameron for the efficient manner and great interest which he had displayed in the discharge of the duties of Honorary Treasurer of the Association since its inception; also to Mr. Gilbert Allan who had frequently audited the books of the association gratuitously.

During the afternoon session an extensive discussion took place upon the question of endeavoring to secure from the Dominion Board of Railway Commissioners an order requiring the railway companies to pay reciprocal demurrage upon cars held in shipment, placing or lifting.

Mr. W. C. Hughson, of Gilmour and Hughson, Hull, Que., during the discussion upon the question of demurrage and reciprocal demurrage stated that his company had had a shipment of 5 cars for Rouses Point. It had taken 31 or 32 days to get these cars delivered from Hull to the Grand Trunk Railway at Ottawa.

The secretary said that the association had received several reports of this nature. In one case a car had been left one day over the free loading time and the railway had promptly collected the one dollar demurrage to which they were then entitled. Then they had left the car and others of the same shipment in the same place for seven days more. He also cited other cases of an equally extreme nature and impressed upon the members the utmost importance of their furnishing the secretary of the Association with every instance of delay which would assist the association in presenting a strong case before the Dominion Board of Railway Commissioners whenever the case came up, which might be almost at any date now.

Mr. J. P. Johnson, Toronto, reported a case in which it had taken 23 days to deliver a shipment of lumber from Midland to Peterboro.

Other members presented a number of cases of a similar nature and the general conviction was that it was of the greatest importance that all members should keep careful account of any delays in their shipments caused by the railroad companies, and furnish the secretary of the association with all possible information upon the subject. Several members stated that they had already taken steps to secure evidence of this nature by sending to their customers printed blank forms upon which full information could be entered as to the time at which shipments were received, placed and cars lifted. This information would be of great value to the Association if collected by a large number of shippers.

Mr. Gordon C. Edwards, Ottawa, also made a strong plea for co-operation on the part of the members in the direction of assisting the secretary by furnishing him with all information which would be of assistance in their fight against the railway companies. They had a paid secretary and a number of standing committees at Ottawa all of whom were willing to do their utmost to assist the members in reaching a satisfactory solution of the difficulties which they continually had to meet.

#### Experiences of National Wholesalers

Mr. E. F. Perry, Secretary of the National Lumber Dealers' Association, New York City, N.Y., was called upon to address the meeting.

He gave a very interesting talk upon the work of the Association which he represents, prefacing his remarks with the statement that there was a danger of lumber associations and other associations in general specializing too much upon the particular interest of their own trades. If it were possible it would be better for all associations of a similar nature to merge their efforts in a good many of their common interests and work in co-operation for the attainment of general commercial and financial reforms. However, this did not seem to be practical under present conditions.

About the only way in which they could accomplish results through their association work under present conditions was along the lines which were being followed by the Canadian Lumbermen's Association. It was apparent that the lumber business was a constantly changing proposition. The lumber business was conducted to-day on an entirely different basis from that of twenty years ago, and it was difficult thing to keep in touch with all the changes unless lumber merchants and manufacturers kept in close touch with their fellow competitors. It was encouraging to see that the lumber trade had been probably the first to get together in this manner for the purpose of bringing about the collective advantages of all concerned. He thought that the trade in Canada was to be congratulated upon the manner in which the Canadian Lumbermen's Association had grown. He was greatly pleased to witness the enthusiasm which was shown by the members. The lumber merchants of the United States did not minimise the fact that Canada was a great lumber producing country nor were they overlooking the fact that Canada was growing rapidly. Under such conditions it was of great importance that the representatives of the lumbering industry should get together and put themselves in a position to develop the interests of their trade.

The National Wholesale Lumber Dealers' Association had exactly the same problems to solve as the Canadian Lumbermen's Association. They were having a great deal of trouble with their car service. Transportation problems were continually troubling them. They had also their troubles about the weighing of lumber and seem to be up against a stone wall. They were getting car after car right now, over weight from 5,000 to 15,000 lbs. upon which they were not able to obtain any redress whatever. They did not seem to be able to reach the question of delay in transit in any way. In fact their transportation problems were identical with those of the Canadian trade.

Next to the transportation work, he believed the question of credits was most important. Mr. Perry then explained in some detail the system adopted by the association in connection with credit rating. Their experience was that a man who refused to make a financial statement of his affairs should not be given any credit at all. There were of course exceptions to this case in the men who were so well off that they did not need to make any statement of their position at all. He believed that the Canadian Lumbermen's Association would find the credit proposition more important than any other. The National Wholesale Lumber Dealers' Association had done a great deal for their members along this line and they had also been of great use to their members in connection with insurance matters.

Mr. Perry's remarks were received with great interest by all who were present and at the conclusion he was greeted with prolonged applause.

In connection with the resolution upon track scale allowances, Mr. C. A. Larkin, Toronto, moved that an addition should be made to the resolution to the effect that the railways should put detailed information as to weights upon each bill. If this were done, shippers would know in each case whether the proper allowance had been made. A great many over charges were continually being made, regarding which shippers had no information whatever. The resolution was passed in its original form with the understanding that the committee should also take this question into consideration.

Mr. W. S. Tilston, manager of the Transportation Department of the Montreal Board of Trade, who was present at the meeting, was invited to address the members upon transportation questions, Mr. Tilston, however, remarked that he was present more for the sake of learning the point of view of the lumbermen than to address them upon the subject. He thanked them for the courtesy to be allowed to listen to the subject before expressing any of his views.

#### Reciprocal Demurrage Advocated

Mr. J. G. Cane, Toronto, presented a resolution which was seconded by Mr. Arthur H. Campbell, Montreal, as follows:—"If it is the intention of the railways, after the 1st of April, to continue the increase demurrage charge or to try to continue it penalizing the shippers for detention of cars after certain periods of unloading, we should ask for reciprocal demurrage for cars that are detained in placing for loading and for unloading." At the suggestion of the chairman the resolution was extended by adding the words; "and for not being taken away when they are loaded." After a considerable discussion regarding the necessity for placing the association so definitely on record, the resolution was carried.

Mr. Geo. Gordon, Cache Bay, Ont., said that he thought the association should pass some sort of a resolution, of which a copy should

be sent to the Board of Railway Commissioners and to the Government, objecting to the haste with which the demurrage increase had been put through. He did not believe that it had ever been the intention of the measure creating the Board that it should act in such a manner. It appeared to him to be ridiculous in the extreme and they ought to place themselves on record against it. It was neither right nor fair and there was nothing decent about it at all. If the Commission had power to do such a thing they ought not to have it. If they had that power it ought to be taken away.

Mr. Arthur H. Campbell, Montreal, said the chairman of the association had not heard the case at all as he was in Winnipeg at the time. If he had heard it it was probable that the order would not have been passed.

Mr. Tilston said that he had received a telegram on Thursday in Montreal, advising him of the hearing which was to be held in Ottawa on the following Tuesday. The railways themselves had been working on the case for nearly a month before. Mr. E. R. Bremner, chairman of the committee on transportation, impressed upon the members the importance of sending to the secretary all the information possible upon this subject so that they might have a good case to present before the Board when the question came up again. As far as they could make out, the question was likely to come up at any time.

#### Freight Rates on Yellow Pine

Mr. Arthur H. Campbell asked whether the association had taken any steps in connection with the question of the increase in freight rates upon southern pine coming into Canada.

An interesting discussion followed upon this subject. The secretary stated that several letters had been received from firms interested in this matter and the protest had been filed with the Board of Railway Commissioners at Ottawa. The Board had written to the effect that they doubted whether they had any jurisdiction over any tariff filed by an American road although part of it operated in Canada and suggested that the Canadian Lumbermen's Association should file a protest with the Interstate Commerce Commission on the other side. The secretary discussing the question further said that he could quite see that this would be a very important question for some members of the association. It might not commend itself very strongly to some other members, but the executive were doing what they could in connection with the question. The difficulty was owing to the fact that the whole increase asked for was to go to the Canadian roads. They did not mind helping the Canadian roads along, but if these roads intended to ask the United States roads to increase their tariffs and the latter were not going to get any benefit, Canadian shippers ought to have something to say; not alone as a protest against the general idea of the increasing rates. If they allowed that increase to take place they did not know where it would stop and the rates on lumber were high enough in Canada already. The proposed increases would affect all the importations of hardwood and southern pine. The protest had come principally from those who were handling southern hardwoods in Canada.

Mr. Arthur H. Campbell, Montreal, said that the Canadian Lumbermen's Association had made great efforts last year to have the Government pass a law to keep yellow pine out of Canada by having the duty applied to lumber dressed on more than one side. If the proposed increased freight rates were passed it would mean that less yellow pine would come to Canada. He did not see why Canadian lumbermen should fight for the southern pine men. He believed it would be a good thing for most Canadians if the freight rates on yellow pine were advanced.

Mr. Gordon C. Edwards, Ottawa, said that the association had a number of members in the wholesale trade who were importing yellow pine. He thought they ought to be consistent in such a matter and although he was a manufacturer he had no objection to the present rates.

Mr. Hugh A. Rose, Toronto, said that his firm would like to see the rates on yellow pine doubled.

Mr. Gordon C. Edwards replied that he was perfectly serious in the matter. If the rate was high enough now, there was no reason why it should be doubled. He thought they ought to consider the interests of all their members and not be at all selfish in the matter.

Mr. Geo. Gordon, Cache Bay, Ont., said he had no objections to southern pine coming into Canada provided all things were equal. To-day, as everyone knew, southern pine was coming in free of duty, whereas Canadian lumber going into the United States paid a duty. It looked to him as though the Government had not been doing its duty by the lumbermen. He was in favor of the same duty being imposed upon lumber entering both countries. He believed there was a chance now of the duty being removed upon Canadian lumber entering the United States. If he had his own way in the matter he would like to see Canada legislate for itself without regard to the course taken by the United States. He really believed that Canada should impose a duty upon that class of lumber, whether the duty was taken off by the United States or not. In regard to the freight rate

situation, so far as he was concerned, he would have no complaint to make if the railways decided to put on the extra five cents.

Mr. Walter C. Laidlaw, Toronto, said that the increase was proposed at the request of the Canadian railways. They were not doing it to protect Canadian lumber manufacturers, but to increase the revenue of the Canadian railways. They were simply trying to get at the lumber trade in another direction. If this increase were put through, the chances were that some of the American roads would want an increase of rates into the United States. Then the shoe would be on the other foot. He thought that the association ought to take the same stand as always and fight the railways on any increase of rates.

This brought the discussion upon this subject to a conclusion.

A vote of thanks was then passed to the chairman Mr. J. C. Browne, Ottawa, for the courteous and able manner in which he had directed the affairs of the meeting.

A vote of thanks was also passed to the secretary, Mr. Frank Hawkins, for the valuable work which he had done and was still doing for the association.

#### Officers For The Current Year

The report of the nominating committee was then presented and adopted. It proposed a list of directors and the directors afterwards held a meeting for the appointment of officers. The result was that the officers and directors for the current year are as follows:—

President, Alexander MacLaurin, Montreal; Vice-Presidents, J. C. Browne, Ottawa, J. S. Gillies, Braeside, Ont., His Honor D. C. Cameron, Winnipeg, and John Hendry, Vancouver; Executive Committee, Alex. MacLaurin, Montreal, J. C. Browne, Ottawa, Gordon C. Edwards, Ottawa, J. S. Gillies, Braeside, and J. J. McFadden, Renfrew; Directors, W. Power, M.P., Quebec; E. H. Lemay, Montreal, Arthur H. Campbell, Montreal, D. L. White, Midland, Walter C. Laidlaw, Toronto, J. G. Cane, Toronto, W. A. Firstbrook, Toronto, A. D. McRae, Fraser Mills, B.C., Wm. McNeill, Vancouver, B.C., and the following new members A. L. Mattes, Prince Albert, Sask., Duncan McLaren, Toronto, C. A. Larkin, Toronto, and J. Hanbury, Wycliffe, B.C.

This concluded the fifth annual meeting, and in the evening an excellent banquet was held at the Chateau Laurier.

#### Banquet at the Chateau

At the banquet, which was held at the Chateau Laurier on Tuesday evening, February 4th, a large number of guests were present and a most enjoyable evening was spent by everybody. Senator W. C. Edwards occupied the chair, and the chief guests of honor were Mr. E. M. Macdonald, M.P. for Pictou, N.S., and Hon. J. G. Foster, United States Consul General for Canada. Hon. R. L. Borden, Prime Minister of Canada had expected to be present at the banquet but was unable to attend on account of his pressing duties in the House of Commons. In his place Hon. Geo. H. Perley made an excellent representative of the Government, and delivered one of the most interesting speeches of the evening. Sir Wilfrid Laurier had also expressed his intention of being present, but unfortunately was confined to his house on account of temporary illness. Mr. E. M. Macdonald, M.P., kindly consented to take the place of his chief as a guest at the banquet and he delivered a stirring and much appreciated address in reply to the toast of "Canada."

Among the guests at the head table were Senator Geo. Gordon, Cache Bay, Ont., J. G. Cane, Toronto, J. L. Campbell, Toronto, D. H. McLennan, Montreal, H. K. Egan, Ottawa, Wm. Power, M.P., Quebec, E. J. Perry, New York, J. C. Browne, Ottawa, Hon. G. H. Perley, Ottawa, Hon. J. G. Foster, Ottawa, and E. M. Macdonald, M.P.

After the toast to the King had been loyally honored the chairman called upon Hon. Geo. H. Perley to reply to the toast to the trade. The speaker referred in a reminiscent and interesting manner to the great changes which had taken place in the logging and lumber manufacturing industries since his early days. He laid particular stress upon the importance of preventing settlement upon lands which are not suited for agriculture. In his opinion the Government ought to divide the country into areas and draw a line around those parts which were not fitted for agriculture. Upon these areas the Government ought to adopt modern forestry methods for the preservation or production of valuable timber.

Mr. E. M. Macdonald, M.P., in his reply to the toast of "Canada" referred also to the great changes which had taken place in the lumber industry during the past 50 years. He made timely reference also to the development of the neighborly spirit between the peoples of the United States and Canada, expressing the hope that the two countries, which were about to celebrate the 100th anniversary of peace, would be able a hundred years later to celebrate the 200th anniversary.

In proposing the toast to "The United States" Senator Edwards spoke most feelingly of the high esteem in which Hon. J. G. Foster, United States Consul General at Ottawa, is held by the people of Canada. So great was this appreciation of Hon. Mr. Foster and his work that the people of Canada all hoped that the impending change

in the government at Washington would not result in Hon. Mr. Foster's removal from his present position. Senator Edwards suggested that some prominent Canadian should start a petition to be signed by a large number of Canadian people and sent to the government at Washington, praying that Hon. Mr. Foster should be left in the office at Ottawa which he was filling so ably and so acceptably to the people of Canada.

Hon. Mr. Foster made an excellent speech reviewing the developments which had taken place in the United States during the last century and a quarter and those of Canada during the last fifty years.

The toast to "the Press" was replied to by Mr. Douglas Malloch of the American Lumberman, Chicago, Ill., who delivered a very witty and entertaining address.

The following is a list of those who signed the roll at the meeting:—

W. B. Maclean, Conger Lumber Co., Toronto; R. G. Cameron, Cameron & Co., Ltd., Ottawa; W. C. Laidlaw, R. Laidlaw Lumber Co., Toronto; J. A. Story, Fraser Bryson Lumber Co., Ltd., Ottawa; Hugh M. Williams, Williams Lumber Co., Ottawa; P. C. Walker, Shepard & Morse Lumber Co., Ottawa; John B. Allan, Robert Cox & Co., Ottawa; J. B. White, Riordon Pulp & Paper Co., Ltd., Montreal; H. A. Hartingh, Edward Hines Lumber Co., Chicago and Parry Sound; Jas. G. Cane, Jas. G. Cane & Co., Toronto; D. McLaren, Union Lumber Co., Ltd., Toronto; Chas. A. Duff, A. Barnet & Co., Renfrew, Ont.; Hugh A. Rose, Canadian Western Lumber Co., Ltd., Toronto and Fraser Mills, B.C.; A. L. Eastcott, Pembroke Lumber Co., Pembroke; H. J. Terry, Muir Terry & Gordon, Toronto; J. L. Campbell, Campbell & Johnson, Toronto; J. P. Johnson, Campbell & Johnson, Toronto; A. E. Gordon, Muir Terry & Gordon, Toronto; J. A. Detweiler, Quincy Adams Lumber Co., Toronto; N. C. Hocken, Hocken Lumber Co., Otter Lake, Ont.; Walter M. Ross, J. R. Booth, Ottawa; Samuel Thomson, W. C. Edwards & Co., Ottawa; C. B. Dougherty, Rideau Lumber Co., Ltd., Ottawa; J. J. McFadden, Ferguson & McFadden, East Templeton, Que.; J. E. H. Barnet, A. Barnet & Co., Renfrew, Ont.; Senator W. C. Edwards, Ottawa; D. H. McLennan, Montreal; Hugh McLean, Buffalo, N.Y.; E. F. Perry Secretary National Wholesale Lumber Dealers' Association, New York, N.Y.; Wm. Power, W. & J. Sharples, Quebec; F. McCrae, Sherbrooke, Que.; H. K. Egan, Hawkesbury Lumber Co., Ltd., Ottawa; Geo. Gordon, Cache Bay, Ont.; H. B. Poliwska, J. Burstall & Co., Quebec; Arthur H. Campbell, Campbell MacLaurin Lumber Co., Montreal; Maurice Welch, Campbell MacLaurin Lumber Co., Montreal; J. C. Bartram, The Rideau Lumber Co., Ottawa; J. O. MacLaurin, Charlemagne Lumber Co., Montreal; C. A. Spencer, Montreal; E. M. Barrett, Barrett Bros., Ottawa; Fred T. Smith, Montreal; Geo. W. Grier, G. A. Grier & Sons, Montreal; E. C. Plant, T. Mackarell & Co., Ottawa; A. E. Craig, Northern Timber Co., Ltd., Toronto; C. A. Larkin, C. A. Larkin Lumber Co., Ltd., Toronto; John Donogh, John Donogh & Co., Toronto; E. R. Bremner, Watson & Todd, Ltd., Ottawa; Ward C. Hughson, Gilmour & Hughson, Ltd., Hull, Que.; Gordon C. Edwards, W. C. Edwards & Co., Ottawa.

#### Intercolonial Increasing its Equipment

Mr. A. W. Campbell, Deputy Minister of Railways and Canals whose attention was recently drawn to the frequent letters published in the Canada Lumberman, from lumbermen in Eastern Canada, complaining of the shortage of cars upon the Intercolonial Railway, writes to the Canada Lumberman upon this subject as follows:—

Wednesday, January 15th, 1913.

Editor Canada Lumberman:

In reply to your favour of the 8th instant, in which you state that you are in receipt of complaints concerning the shortage of cars on the I.C.R.

We beg to say that the rapid increase in business along the line is to an extent going ahead of our car equipment. However, with a view to placing the road in a position to meet the growing traffic, and to obviate any further cause for complaint, the Department has, since April 1st, 1912, placed orders for the following rolling stock:—

1373 steel frame box cars.  
300 wooden box cars  
200 steel underframe flat cars.  
50 Hart-Otis coal cars.  
50 Hart-Otis dump cars.  
100 Hart-Otis convertible cars.  
35 refrigerator cars  
20 steel underframe stock cars.  
1 tank car.  
20 consolidation freight engines.  
8 switching engines.

This rolling stock is now being delivered.

Yours truly,  
A. W. Campbell.

Mr. Overton W. Price of the United States Forest Surveys, who spent some time in Victoria, B.C., last summer advising the Minister of Lands upon the organization of new Forests Branch, returned recently for a visit of about ten days to look into the progress of the work. He expressed himself as very much impressed with the thorough manner in which the work of organization was being carried out.

# Forestry Association's Annual Meeting

**Successful Results Reported for Operations of the Past Year—Hon. W. A. Charlton, President for 1913—Next Convention at Winnipeg**

The fourteenth annual business meeting of the Canadian Forestry Association was held in the Board of Trade Rooms, Ottawa, on February 5th. The reports presented showed that a large amount of work had been done during the year. Two conventions were held, one in Ottawa, and one in Victoria, B.C., at each of which, great interest was manifested in the work of forest conservation. At the latter convention representatives of all the Provinces except Nova Scotia and Prince Edward Island were present.

The report of the Directors showed steady progress in forest conservation during the year. The Dominion Forest Branch, in addition to its tree planting work, examined a number of areas in British Columbia, Alberta, Saskatchewan and Manitoba to ascertain if these should be put into forest reserves. In British Columbia a new and vigorous forest service had been organized on July 1st.

The report referred to the success which had attended the annual convention of the Association at Victoria, B.C., in September last. During the year 1912 progress in conservation had been steady in

Hon. W. A. Charlton, Toronto, Ont.

Canada. The Ontario government and the Ontario limit holders had had over 1,000 rangers in the field during the danger season. It would appear that the total federal and provincial government and private companies' expenditure on forest protection during 1912 had amounted to between \$1,000,000 and \$1,500,000. Referring to the education of forest rangers the report said "Another part of the field of education has not yet been touched, namely that of training the rank and file of the forest protective army, the forest rangers, for their duties. This training is for men already in the employ of the forest services who have passed tests as to their ability and experience. While every effort should be made to admit only fit men to the services it is felt that these would all be immensely more efficient if they could be given a few weeks' training under men who know the best methods of protecting timber, avoiding waste in utilization, fighting fires, etc., and who have the faculty of imparting this knowledge to others. Ranger schools have proved very efficacious in other countries in increasing the efficiency of the men, and in showing them how to do the work to the greatest advantage. They have thus developed an esprit de corps in the force which has done much for the whole service, and to develop the idea of forest conservation among the people. One of the next things for which it is felt the Association should press is for the establishment of ranger schools in connection with the federal and provincial forest services."

The Directors again urged the need of a federal laboratory for the testing of the different varieties of Canadian woods. It is hoped this will be secured during the present year.

There had been steady progress in educational work in forestry. Ranger schools were advocated for training men already in the various services, more fully for their duties.

Reference was made to the loss to forest conservation in the death of such staunch advocates as Sir Edward Clouston, Senator Rolland, and Mr. R. W. Shepherd of Montreal, and Mr. Otis Staples of British Columbia.

The membership of the Association continued to grow, the number now being 2,865. While the growth of the work entailed the largest expenditure in the history of the Association, the income had been proportionately large and there was a balance after paying all expenses.

In conclusion the report said:—"On the whole, while the work to be overtaken is very large and the need of prompt action to save our forests pressing, your Directors believe that Governments and people are beginning to realize the need of forest conservation, and they therefore urge the putting into operation of a constructive program for the coming year—one that will show that the ideal of conservation is not the locking up of resources but their wise use by and for the people of Canada."

Winnipeg was selected as the place for holding the next convention, the date to be the latter part of July.

Dr. B. E. Fernow reported on the possibility of establishing a uniform log rule for Canada and also upon the forest fire laws at present in force. These reports were received and the committees upon these subjects were permitted to amend their reports before printing.

A vote of thanks was passed to His Royal Highness the Duke of Connaught for acting as patron of the association and expressing the sympathy of the association to him on account of the illness of Her Royal Highness, the Duchess of Connaught, expressing at the same time an earnest hope that she will be speedily restored to health.

Some discussion took place upon the advisability of continuing the publication of the Canada Forest Journal, and it was decided that the publication should be continued.

The officers elected were as follows:—Patron, H.R.H. the Governor-General; Honorary President, Rt. Hon. R. L. Borden; Honorary Past President, Rt. Hon. Sir Wilfrid Laurier; President, Hon. W. A. Charlton; Vice-President, Wm. Power, M.P.; Secretary, Jas. Lawler; Treasurer, Miss M. Robinson.

Board of Directors: Wm. Little, Hiram Robinson, Aubrey White, E. Stewart, H. M. Price, W. B. Snowball, Thomas Southworth, Hon. W. C. Edwards, Geo. Y. Chown, Hon. Sydney Fisher, R. H. Campbell, J. B. Miller, Gordon C. Edwards, Dr. B. E. Fernow, Ellwood Wilson, Senator Bostock, E. J. Zavitz, H. R. MacMillan, F. C. Whiteman, G. C. Piche, Alex. MacLaurin, J. B. White, Mgr. Mathieu, Bishop of Regina, A. P. Stevenson, Wm. Pearce, Wm. Power, C. E. E. Ussher, Denis Murphy, C. Jackson Booth, Wm. Price, J. W. Harkom, A. S. Goodeve, W. C. J. Hall, J. S. Dennis, Geo. Cahoon, V.P., R. D. Prettie.

Editorial Committee: R. H. Campbell, Thos. Southworth, Avila Bedard, J. M. Macoun, Ellwood Wilson, E. J. Zavitz, and F. W. H. Jacombe; Editor, James Lawler, Associate Editor, G. C. Piche.

Territorial vice-presidents for the various parts of Canada were appointed as follows:—

Ontario, Hon. W. H. Hearst; Quebec, Hon. Jules Allard; New Brunswick, Hon. J. K. Fleming; Nova Scotia, O. L. Daniel; Manitoba, Hon. R. P. Roblin; Prince Edward Island, Hon. J. A. Matheson; Saskatchewan, His Honor G. W. Brown; Alberta, Hon. A. L. Sifton; British Columbia, Hon. W. R. Ross; Yukon, Commissioner Geo. Black; Mackenzie, F. D. Wilson; Keewatin, His Honor, D. C. Cameron; Ungava, His Grace, Mgr. Bruchesi, Archbishop of Montreal.

## Fraser River Shipments Increasing

It is expected that during 1913 the lumber export trade on Fraser River will make a new high record. Conservative estimates state that the shipments to be made to Australia and South Africa will be in the neighborhood of 30,000,000 feet. The Canadian Western Lumber Company is already reported to have booked for 12,500,000 feet to Australia and 2,500,000 feet to South Africa, and the sales manager expects these figures to be doubled. The Brunette Mills expect to ship between 2,000,000 and 3,000,000 feet to Australia. Prices for foreign business are exceptionally good.

# Trade Conditions Reviewed by Readers

## Lumbermen in General Expecting Good Business During Present Year—Building Situation Needs Watching

Editor Canada Lumberman:—

Toronto, February 4th, 1913.

"Express your opinion on prices of lumber for the year 1913 in Canada," is the question put to many, and very few venture to answer. Opinions were frequently expressed in the earlier months of 1912 in a quiet way. Some there were who said that prices would go higher on the season's opening, others just as conscientiously expressed themselves to the contrary. It must be conceded by even the most bearish, that prices at the beginning of the season, opened up slightly and were materially added to as the year progressed.

The prosperity of this country last year was phenomenal in almost every line of trade, but speaking more particularly of the lumber industry in the year of 1912, it is interesting to note that notwithstanding the many difficulties, to which the woods operations were subject (two of which we mention, scarcity of labor and the high prices obtaining for supplies) the winter of 1912 was on the whole, satisfactory to operators and with the higher prices that the opening of the sawing season brought, and the still higher that ruled from time to time as the demand increased, must surely have been a matter of very great satisfaction to the producer.

We may venture to hope that present prices will be maintained. The ever-increasing home consumption, as well as the export demand for lumber, must be caught up with, or we may yet see still higher prices; more particularly in the coarser grades of pine and hemlock. Take for example the case of No. 1 and No. 2 mill culls. There is no question at all but the demand is greater than the supply. The same may be truly said respecting hemlock. At the close of 1911, any one who is at all observant could see that the supply of both was becoming appreciably less and with six months demand ahead, without any possibility of satisfying it until the new cut came on the market, surely there should be no great wonder that prices of both kinds were increased.

The producer has to-day the upper hand and one need not be surprised to find considerably higher prices ruling (at least in some goods) for the 1913 cut, than were obtained for that of 1912. However, it is to be desired that good judgment be displayed by the sawmillers in the matter of increase and that exorbitant prices be not asked too early in the season, as anything of the kind would make the use of coarser grades of pine and hemlock prohibitive.

The requirements so far this year are large, more particularly for the cheaper lines of pine, hemlock and spruce. Bill stuff, too, is required, but large quantities of the latter are being imported from the United States, at figures reasonable enough to satisfy users. Is this demand to continue if prices go higher than they now are?

There is little doubt but that speculation in house building will be curtailed somewhat on account of what may seem—to those requiring material—too high figures, and also as money is becoming more difficult to obtain on first mortgage. As a matter of fact, the writer has it from a reliable source, that interest at the rate of  $6\frac{1}{2}$  to 7 per cent. on 50 per cent. valuation is being asked. This rate for money in itself (if nothing else) is sufficient to interfere with building on speculative lines. Should these rates be accepted, there is no question about it, that taking the same for a five year term, the one so borrowing cannot go very far without striking a snag. Consequently, if there is any considerable falling off in this class of building, for any cause whatever, we may look for a very much easier market for mill and dead-cull pine. Then again, a substitute has been obtained for dead-cull pine, in the making of packing boxes of light construction. A corrugated paper box is being used by a large manufacturing concern that annually cut up for the purpose mentioned, 750,000 to 1,000,000 feet of dead-cull pine. To demonstrate what has happened in this case, they, to-day are using about 25 per cent. only of the above mentioned quantity. This instance in itself would make little difference to the market, the quantity appearing very small as compared with the cut, but it is merely mentioned to show what may occur when prices advance too rapidly.

Now, what about the lath trade? There is no disputing the fact that wire lath in the better class of building has displaced the number one white pine, and although it is not for a moment contended that the wire lath are cheaper than pine, yet it is nevertheless a fact that they have been displaced for this class of building, and what will happen to No. 2 and No. 3 lath, if speculative building in the cheaper class of house is stopped for even a single year? What an accumulation of inferior material would go to the burner, not of lath of recognized makes and qualities, but rubbish that is sometimes called No. 3 and sold as such, and picked up and used because it is lower in price than a lath that is worth using. It may be said by many that nothing of a serious nature exists at the present time to interfere with our continued prosperity, but when facts are presented which tend to make conditions look strained and assuming that such a state of trade may exist, it behooves all to proceed cautiously and work on conservative lines.

Let us hope, too, that the conditions (said to exist) in the woods operations, may change for the better and that the year 1913 may be a profitable one for all concerned.

Wholesaler.

### Business Good, But Troubles Numerous

Editor Canada Lumberman:—

Exeter, Ont., January 8th, 1913.

Generally speaking trade has been good with us during the past season. We had to advance prices last January as we found that material and wages were going to be higher. On comparing our business with the last four years we find we have increased our business in 1912 about 6 per cent., and profit about 4 per cent.

As to our experience during 1912 in business life we have at times found it not of the pleasant kind. We find the same as other firms that it is difficult to get and hold good men. We have had to take on men who knew nothing about the business and you know what that means to those in charge.

Another trouble has been to get hemlock for our local trade, also to get delivery from railroads of our material to ourselves, as well as to outside customers. We cannot understand how the Railway Commission could allow

an advance of demurrage rates and not try to protect those to whom shipment is being made.

We have, during the past year had our cars delayed from one to three weeks and then they would run three cars in on us at once expecting us to get them unloaded on time. Some system should be found so that the railways could not have it all their own way.

As to business for 1913, we would say that with the good times and the crops which the country has had, things should be good for 1913. But prices will again have to advance as we find that wages and running expenses will be higher.

The Ross-Taylor Company, Limited.

### Had a Good Year—The Sash and Door Trouble

Editor Canada Lumberman:—

Stouffville, Ont., January 6th, 1913.

We are pleased to report a good year in 1912. Prices were a little higher and profits were good. Our business last year increased about 10 per cent., which is very good for a place this far from any large centre. Our collections were the best last year of any year for some time. Considering the hard times the farmers had the year before, we should be very much encouraged. Prices were about \$2 to \$5 higher in many instances. Hemlock sold in 1911 for \$20 to \$23, and last year we sold all we could get for \$23 to \$27. Pine in strips ran about the same as during the year past, but 10-inch and 12-inch pine was about \$4 higher. Shingles were stiffer in price also, and sold readily.

In reference to the outlook for this year we cannot of course give any definite information, but we have been looking around, and we find that our prospects are far in advance of last year. Of course prices will be firmer, but when a farmer has to build he must have the material, and so has to pay the price.

I have noticed in the few last issues of the Lumberman, that the Hemlock Association and the Sash and Door Association are raising kicks about imported stock in doors, sash and in Georgia pine. Now, as a small manufacturer of doors and sash, let the writer say that I think that our Canadian manufacturers have no cause to kick about the United States goods. I think the kick should go back to the manufacturing of the material in our mills. A few years ago we could buy all the clear pine we wanted for \$20 or \$25 per thousand, and now if we want it clear they tell us it is all exported. What we get, they charge us in the neighborhood of \$60 per M. ft. for. This then, is not without considerable waste. If all the door and sash people have to pay as we have, I do not wonder at them kicking.

If my neighbour can make a living profit on material and sell cheaper than I can, I consider I would be going beyond my bounds to have him held down, and prohibited from selling at his own price. I had a door and sash dealer in Toronto tell me a week ago last Friday that he could buy better doors, at a better price in the United States, than he could from any Canadian manufacturer. Patriotism is all right, but we sometimes have to pay mighty dear for it. I believe in giving our own people all we can, but when it comes to selling to the public you have to get the best, and at the best prices.

D. M. Heise & Company.

### Interesting Situation in Alberta

Editor Canada Lumberman:—

January 9th, 1913.

The year 1912 has been a very favorable one from the standpoint of crops in Alberta. Unfortunately a car shortage similar to that of previous years is being experienced, and inasmuch as Alberta is the farthest province away from the market, it perhaps has suffered a little more than the other prairie provinces in this regard.

The retail lumber companies were very cautious during the first six months of 1912 in their sales, and the farmers of the country were equally as cautious in their purchases, so that the volume of business during the first half of the year was not so large as in the last half. The wholesale market remained about the same through the entire year, excepting perhaps that it strengthened somewhat during the last two months. The fact then, of the wholesale prices remaining practically the same for the year, has also prevented any appreciable change in the retail prices.

New railroads are dividing the territory in Alberta and, of course, opening up new towns. The trade in these new towns has been heavy, but the fact of the railroads passing through new territory will have the effect of somewhat diminishing the territory previously supplied by the established yards on the lines of railroad already built.

There has been a heavy influx of new settlers during the past year and this will have the result of increasing business for 1913.

The volume of business for 1912 has been considerably heavier than for 1911, and it is confidently expected that 1913 will maintain the proportionate increase if the crop conditions remain the same.

The new Peace River country to the north is attracting a great deal of attention, and a large proportion of the settlers coming into Alberta are going into that part of the province. There is, however, a considerable quantity of native spruce lumber in that country which will supply the demands of the settlers for their first set of buildings, and this trade, therefore, cannot be very materially considered in connection with the established lumber business of the province as the most of this native lumber will be cut by small portable outfits.

The retail lumbermen of Alberta are awaiting with considerable interest the outcome of the amendment to the present Banking Act. There is no doubt, if this amendment is passed, that it will have a very beneficial effect on the retail business, as it will, to a large extent, solve the difficulty of the lumber dealer financing the farmers from the spring of the year until they sell their grain in the late fall or winter.

Unfortunately, there has been a tendency on the part of line yard companies during the last couple of years to rush into every new location that is opened and put too many yards in a town. This can have only one result, viz., that in the course of a couple of years the number of yards has to be reduced. This burdens the yards which remain with the investment of those

who have discontinued business in these towns. If a reasonable number of yards would enter a town there would be less probability of cut prices and low profits, but so far this seems to be a very hard matter to regulate, and until all of the new territory is taken up there will be no way of making comparison of years in volume of business.

Practically all of the mountain mills were running to full capacity in 1912, and it is generally conceded that the stock on hand at these mills at present is lower than it was a year ago, so that there is a probability of a lumber shortage in 1913 if there is the same proportionate increase of business over 1912, as it is very problematical whether the mountain mills will be able to supply the demand. This condition will also have a tendency to still strengthen the wholesale prices, and although no definite advance on the part of the manufacturers has been announced, it is expected by the retailers that there will be some advance in the wholesale prices.

As it is very early in the year 1913, it is almost impossible to obtain any figures covering the business of the year 1912, and comparisons, therefore, are hard to make.

Crown Lumber Company, Limited.

#### Good Sales Returns

Editor Canada Lumberman: Dresden, Ont., January 4th, 1913.

Our sales for 1912 were considerably above that of 1911. Owing to the wet weather and backwardness of the season collections until late in the fall were slow, but in December collections were good. The outlook for 1913 looks favorable.

Laird Bros.

#### Outlook Good—Small Cut Probable

Editor Canada Lumberman: Lindsay, Ont., January 4th, 1913.

We found the lumber trade during 1912 very much better than during 1911. The outlook for 1913 is encouraging, but the prospect for a large cut in the bush seems doubtful on account of the weather conditions at present. On account of the large amount of railway building, and the great increase in the population of Canada from year to year, coupled with the necessary increase in the manufacturing industries throughout the Dominion to keep pace with the growing needs of the country, and for the present and for years to come; the outlook for the lumber trade and for Canada generally is exceedingly bright.

The Baker Lumber Company, Limited.

#### Expect Short Cut in Nova Scotia

Editor Canada Lumberman: Bear River, N.S., January 3rd, 1913.

The greatest drawback at the present time is the entire absence of ordinary winter conditions. We have not as yet in Nova Scotia had anything approaching winter. To-day our roads are as free from snow as they would be in July and there is also an entire absence of frost. We have had rain almost every other day and now in any case the season must be exceedingly short and we anticipated that the cut in Nova Scotia will not be more than 60 per cent. of that in 1911, as several of the large operators have not put crews in the woods. The demand is likely to be normal or in excess of that in 1911, and owing to the conditions above referred to prices should be firmly maintained with an advancing tendency.

Clarke Bros.

#### Better Prices—Profits Steady

Editor Canada Lumberman: Joliette, P.Q., January 4th, 1913.

The trade for 1912 was very good with a tendency towards price advances, and we found the demand for lumber greater than we could supply. Prices were better than during the season of 1911. Profits remained pretty much the same on account of having to pay somewhat higher wages. The outlook for the trade during 1913 seems to be bright, and I think that it will be a very brisk season, as the supply at present seems to be very light. The outlook for this winter's operations at present are of a serious nature, on account of the mild weather, and the scarcity of snow. In some localities the rivers are not even frozen over yet, which is a great drawback in the lumber woods.

Wm. Copping.

#### Had a Busy Year

Editor Canada Lumberman: Brantford, Ont., Jan. 28th, 1913.

We have enjoyed a very busy year during 1912, the business done and lumber handled being heavier than in the previous year. Prices necessarily have been higher with some lines. Bulk has been the feature, the resultant profits being to some extent a matter of the quantity handled.

For 1913 we look for much the same condition as were prevalent during the past year. The state of general prosperity tends toward plenty of business, the results of which, however, are usually affected by supply and demand.

The Schultz Bros. Company, Limited.

#### Best Year in Their History

Editor Canada Lumberman: Owen Sound, Ont., January 11th 1913.

Our business during 1912 was the largest in our history, and trade generally appears to be very promising, though if we should have an unfavorable winter, only a small cut will be available for Ontario mills next season. In any event the number of camps in operation on the north shore of the Georgian Bay is considerably less than usual. Indications are that there will be a shortage of hemlock early this spring.

John Harrison & Sons, Company, Limited.

#### Hardwood Demand Very Strong

Editor Canada Lumberman: Toronto, January 25th, 1913.

The year just closed has been a very satisfactory one both in volume of business done and prices obtained. I refer, of course, solely to the hardwood lumber conditions. No difficulty was experienced in obtaining orders at satisfactory prices and conditions were good. Objections, of course, were raised at times to the prices asked, but as a general rule, for satisfactory stock, orders were booked at prices quoted.

Nineteen hundred and thirteen has opened with a rush demand for dry stock. Orders booked for March delivery are being called in now, showing that stocks are getting low, ahead of expectations. Many large firms are endeavouring to book contracts for future delivery, but the dealers are none too anxious to contract. The weather conditions so far this year have been so unsatisfactory, and the supply of new stock so uncertain, that unless conditions change at once, the prospects for 1913 are none too good and the ten-

dencies are for a stiff advance. No dry stock is available in first hands, and the dealers fortunate in having a supply of dry lumber, will require the greater portion of it for orders already booked. The advance of prices in the States, and the noted absence of many United States travellers on this side of the line, further strengthens my views of higher prices.

J. A. McBean (McBean and Verrall).

#### A Record Year's Business

Editor Canada Lumberman: Brantford, Ont., January 8th, 1913.

In 1912, we did a record year's business, both in quantity and quality. It is therefore, needless to say that we are wearing a smile. The year 1913 has opened up a good percentage better than 1912, and has every appearance that it will continue to grow as did 1912.

Mickle, Dymont & Son.

## The Cooperage Trade During 1912

### Lower Production Than in Preceding Years— Elm Timber Too Costly—Imports from U.S.

By James Innes

The production of cooperage in Canada during the year 1912, was less than it has been during the past twenty-five years, two causes having brought about this condition, viz., the unfavorable winter for getting out stock, and the high price of lumber as compared to cooperage stock.

In Ontario, the winter of 1911-12 was very unfavorable,—it was either a case of too little or too much snow, during the whole of the winter lumbering season. As it is customary to truck in a lot of cooperage material during the summer season, and the summer season was the wettest that was ever known in Canada, practically no summer lumbering was done. The woods never got into such shape as to make it possible to put teams into them, on account of the incessant rains making the woods soft, and not able to bear up teams and trucks.

In British Columbia, the output increased a little over previous years, as weather conditions in that province have not much effect on the production of cooperage stock.

In New Brunswick and Nova Scotia, a large part of the timber that went formerly into cooperage stock was made into pulpwood and lumber, prices for pulpwood and lumber being better than what could be realized by manufacturing cooperage stock, for which low prices prevailed early in the season.

#### The Output in Ontario

In Ontario the output was approximately as follows:—For barrel stock,—85,100,000 staves, 31,200,000 hoops, 3,860,000 sets of heading; for kegs, 1,500,000 staves, 3,500,000 hoops, and 200,000 sets of heading.

In British Columbia the production of all classes of cooperage was, 8,000,000 staves, no hoops, and 500,000 sets of heading.

For Nova Scotia and New Brunswick statistics are very incomplete. We believe the estimates we give as follows, are considerably below the actual production, on account of a great number of saw mills that make staves and heading as a side line, and do not report their output. As nearly as we can ascertain their output for barrel stock was; 18,000,000 staves, 1,150,000 sets of heading, 1,500,000 hoops; for keg stock, 9,000,000 staves, and 1,000,000 sets of heading. We believe these estimates are very considerably below the actual production.

Prices in the early part of the season were very moderate, and below what could be obtained by putting the bulk of material into lumber. But prices advanced considerably in the latter part of the season, in some lines, almost fifty per cent. This, we believe, will have some effect on the production for 1913, as all manufacturers are cleaned out of stock, and are more likely to stock heavier this winter than last, provided they can contract ahead at prices that will be as good as if the logs and bolts were put into lumber or other products.

#### Elm Timber Too Costly for Cooperage

Elm timber has now reached a price where it must become a thing of the past, so far as staves are concerned. No matter how favorable a winter we have, the production of elm staves will be light for next season, the logs going into either hoops, lumber or bill stock.

Birch staves are, however, entering the market, and as they are an excellent stave, there will be quite a fair production of them during this year.

Basswood heading is also becoming a thing of the past, and hardwood heading is also coming into more general use, also spruce heading to a limited extent for barrels.

Elm, of course, is the principal wood used for hoops, but iron hoops are coming more and more into use on account of the high cost of elm hoops, and the scarcity, which necessitated the importing of a considerable number of hoops from the United States last year, but as there is 25 per cent. duty on hoops, this makes the imported ones very expensive.

Labor conditions are growing worse every year. Not only are men demanding higher wages, which they must have, on account of the high cost of living, but paternal legislation along socialistic lines is threatened, which will increase considerably the cost of manufacturing in all lines.

#### Shipments From United States Increasing

The demand for cooperage stock in Canada is increasing, and while in former years immense quantities of cooperage stock used to be shipped from Canada to the United States, this export has almost ceased. In fact, considerable stock is now being imported from the United States into Canada, and this import is likely to increase considerably from year to year, unless sufficient protection is offered to the manufacturers here to warrant them in manufacturing birch staves.

There is no duty on un-jointed staves coming from the United States into Canada, while there is a duty of 25 per cent. on jointed staves. For staves exported from Canada to the United States the duty is 10 per cent., either on jointed or unjointed staves. The consequence is, that while quite a number of staves are being brought from the southern States into Canada, they have to be shipped un-jointed, and the freight on these staves is about 50 per cent. of their value f.o.b. cars at the mills. The railroads are about the only people who benefit by the transaction.

The winter, as yet, has been unfavorable in Canada for stocking up the mills, but we still have February, and in some parts of the country March as well, to reckon on, so with a good winter for the balance of the season, there is plenty of time yet to put in stocks at the mills.

#### Liverpool Trade Expanded Greatly

Messrs. Smith & Tyrer, Limited, Liverpool, England, in their annual report upon the trade of Liverpool for the year 1912 write as follows:—

The year that is past has been an eventful one. Trade generally has developed an almost unprecedented expansion and wood goods have risen in value, in many cases to record prices. Freights, which have largely contributed to the rise, have gone to a very high point. Although from a variety of causes the wood trade has not fully shared the profitable expansion of business in other directions, nevertheless a very satisfactory trade has been done and the present situation may be considered free from any disturbing features. One salient aspect has been the absence of undue speculation or excitement, and the trade has been conducted generally on sound business lines. The outlook is, on the whole, satisfactory. Spruce deals have been sold at improving prices, and as there is an excellent demand for the meagre import the outlook is satisfactory. Receipts must continue light for the next two or three months, and during this period shipments from Russia are necessarily restricted by the winter conditions. Birch continues in good demand both in the log and in the plank, and considerable forward business has been done in Quebec descriptions. Lower ports shipments come to a ready market. Pine deals are firmly held. Hemlock is not offering in any quantity and is little called for.

#### A Satisfactory Year at Glasgow

Messrs. Calder, Henderson & Livingston, Glasgow, in their annual timber market report, say:—

The unsettled conditions prevailing at the commencement of the year considerably moderated the volume of business which would otherwise have been transacted. The opening months were associated with a series of strikes, and the consequent interruption of the progress of manufacturing throughout the country, in conjunction with the upward movement in values, had a counter-acting effect on the consumption, while competition was keen. Once the labor troubles were settled a decided improvement set in, under the influence of the growing activity in the shipbuilding industry, and this improvement has since continued. The result of the year's trading, notwithstanding the difficulties of its earlier period, has been satisfactory, and the absence of any outstanding failures in the trade is a matter for congratulation. Values of all kinds of timber appreciated more or less throughout the year. Among the chief causes responsible were—increased f.o.b. cost and diminishing supplies, but the predominant factor was undoubtedly the rise in freights, which in many instances reached figures that constitute a record. A very high level of prices was reached for teak, pitch pine, oak, elm, and spruce deals, to mention only a few items. The most noticeable features of the import were the exceptionally light arrivals of spruce deals, and the increased supplies of birch logs and Baltic white pine deals. Stocks in the aggregate are moderate and show large shortages in many items.

Shipbuilders, although handicapped through the delay of the supply of raw material from the steel works, have had a record output, and the orders for almost all kinds of timber from this source have constituted the backbone of the year's trading, and the prospects continue to be bright. The output for the year amounted to 640,529 tons compared with 630,583 tons for 1911. Other wood consuming industries, such as engineering and pattern making, followed in the wake of shipbuilding, and have benefited in its expansion, as

also indirectly have the railway companies and wagon builders; a maintenance of orders from these sources can be expected for some time to come. Saw-millers report better business. Packing-case making, which might be termed the barometer of general trade, has been brisk, and the outlook is promising. Cabinet-makers are experiencing better times than of late, and what is now awaiting, and would be welcomed, is some improvement in the house-building and joinery trades.

#### Canada's Lumber Trade with Foreign Countries

Canada's foreign trade in lumber with countries other than Great Britain and the United States, although consisting mostly of shipments in small quantities, reaches quite a respectable total. The exports to these countries during 1912 and 1911 were valued as follows:

|                           | Value<br>1912 | Value<br>1911 |
|---------------------------|---------------|---------------|
| Australia .....           | 49,739        | 28,994        |
| Austria-Hungary .....     | 15,466        | 16,005        |
| Belgium .....             | 6,298         | 5,311         |
| West Africa .....         |               | 3,382         |
| British West Indies ..... | 635           | 2,152         |
| Central America .....     |               | 54            |
| Cuba .....                | 14,900        |               |
| Hong Kong .....           | 31,120        | 27,460        |
| Italy .....               | 1,586         | 9,270         |
| Japan .....               | 16,072        | 16,854        |
| Mexico .....              | 2,258         | 2,166         |
| Newfoundland .....        | 4,033         | 4,158         |
| Norway .....              | 6,886         | 1,284         |
| Philippine Islands .....  | 685           | 2,145         |
| Portugal .....            | 70,751        | 56,274        |
| Siam .....                | 1,854         |               |
| Spain .....               | 91,868        | 119,215       |
| Sweden .....              |               | 44            |
| Total .....               | \$304,151     | \$294,768     |

Canada's exports of wood and manufactures of wood to countries other than Great Britain and the United States for the fiscal years ending March 31st, 1912 and 1911.

|                           | Value<br>1912 | Value<br>1911 |
|---------------------------|---------------|---------------|
| Alaska .....              | \$ 253        | \$ 4,376      |
| Argentina .....           | 2,419,979     | 2,533,651     |
| Australia .....           | 524,394       | 678,053       |
| Azores and Madeira .....  | 15,860        | 26,680        |
| Belgium .....             | 36,984        | 32,676        |
| Bermuda .....             | 64,179        | 21,296        |
| Bolivia .....             | 189           |               |
| Brazil .....              | 48,936        | 75,948        |
| South Africa .....        | 209,992       | 314,702       |
| East Africa .....         |               | 30            |
| West Africa .....         |               | 556           |
| British East Indies ..... | 9,622         | 513           |
| British Guiana .....      | 27,467        | 22,174        |
| British West Indies ..... | 324,795       | 301,546       |
| Canary Islands .....      | 6,609         | 19,132        |
| Central America .....     | 1,294         |               |
| Chile .....               | 20,150        | 119,486       |
| China .....               | 2,182         | 14,249        |
| Cuba .....                | 421,832       | 329,440       |
| Denmark .....             | 666           | 35            |
| Danish West Indies .....  | 367           | 3,207         |

### Forestry Students Annual Dinner

The second annual dinner of the Faculty of Forestry of the University of Toronto was held on January 30th. A number of interesting speeches were delivered among them being one by President Falconer of the University, who declared that the faculty of forestry had already justified itself by sending out a large number of well trained men who were finding plenty of employment in Canada. One of the greatest obstacles these men would find would be the lack of knowledge on the part of the public who did not appreciate what forestry meant. Dr. B. E. Fernow, Dean of the Faculty of Forestry also made a most interesting speech in the course of which he stated that for every qualified forester in Canada to-day there were two good jobs available.

Mr. R. H. Campbell, director of the Forestry Branch of the Department of the Interior announced that the government proposed to add greatly to Canada's forest reserves and by so doing to open up a large field for investigation. The government also had under consideration the addition of a laboratory to the equipment of the Forestry Branch, money having been included in the estimates for this purpose.

Mr. Clyde Leavitt, Chief Forester of the Dominion Commission of Conservation, stated that the Commission intended to devote large areas of the non-agricultural land of the country to forestry.

Mr. R. D. Prettie, Chief Forester of the Canadian Pacific Railway, reported that his company alone was spending as much on forestry this year as the United States Forest Service.

### Report of Inspector of Crown Timber Agencies

Mr. E. F. Stephenson, Inspector of Crown Timber Agencies, in his report, says:—

The holders of licensed timber berths, who are conducting operations, are showing increased care in their cuttings, which are being carried on with the minimum amount of waste. A standing menace facing the lumber operator is that of fire. While every precaution is being taken by those holding valuable timber berths to guard against fire getting in their timber, still fires are of yearly occurrence. The present year has been a disastrous one for some of the berth-holders in northern Saskatchewan, who, it is reported, lost heavily by fires. Operations on the burnt area were carried on last winter as extensively as was practicable, by which upwards of 100,000,000 feet of fire-killed timber was cut. The Forestry Branch of the Department is doing much to bring about in the west a better observance of the laws pertaining to the setting out of fires, but, so long as the woods are open to squatters and summer travelling by traders, hunters, prospectors and others, to come and go at will, without the knowledge of the department, fires will occur, with little chance of the offender being brought to account. To my mind, greater care should be taken to keep settlers from entering upon timber lands adjacent to valuable belts of timber. It is alleged that the destructive fires of last year in northern Saskatchewan, referred to, originated with a settler burning the slash, in the clearing of his homestead. A settler entering upon land that requires to be cleared of timber before it can be cultivated is starting out badly handicapped in the race for success. It costs from twenty-five to fifty dollars per acre in the prairie provinces to clear land of timber for cultivation, and in British Columbia from one hundred to five hundred dollars per acre, and, as these lands are invariably only taken up by settlers with little or no capital to start with, very slow progress towards earning support from the land is made. While there are open prairie lands to be had as homesteads, the local agents should exercise every care to see that timbered lands of the class reserved from entry by the Act, are not parted with as homesteads.

#### Lumber

The demand for lumber and other products of timber throughout the west, during the year, has been good. The prices were somewhat higher than those of last year, from \$2 to \$4 per M. feet on some grades, while on others the increase was greater.

From statistics, carefully gathered, I am able to give the amount of lumber marketed in Manitoba, Saskatchewan and Alberta, during the year, and for comparison the figures for the preceding year are given:—

|                                                                       | 1911-12<br>Feet | 1910-11<br>Feet |
|-----------------------------------------------------------------------|-----------------|-----------------|
| From British Columbia mills                                           | 692,000,000     | 620,000,000     |
| From Western Ontario (pine)                                           | 150,000,000     | 140,000,000     |
| From United States (free)                                             | 236,000,000     | 122,000,000     |
| From United States (dutiable)                                         | 47,000,000      | Not known       |
| Manufactured at mills in Manitoba, Alberta, and Saskatchewan (spruce) | 156,110,144     | 135,524,202     |
|                                                                       | 1,281,110,144   | 1,017,524,202   |

In addition to the lumber imported from the United States, there were imported 67,000,000 lath and 35,000,000 shingles, which products, under the tariff, are free of duty. There also came in from the United States and the province of Ontario 10,000,000 feet B.M. of maple flooring and 6,000,000 feet of other hardwoods.

The licensees of timber berths within the railway belt in British Columbia

continue to operate mainly in provincial timber. The cut on Dominion lands shows a falling off of nearly 15,000,000 feet as compared with the preceding year's cutting. The shipments, however, of lumber from that province into Manitoba, Saskatchewan and Alberta are in amount about 7,000,000 feet greater than last year.

During the fiscal year ending March 31st, 1912, 240,863,681 feet of lumber was manufactured from logs cut from timber berths on Dominion lands under yearly license; as against 203,239,661 feet during the previous fiscal year. Of this quantity 200,232,482 feet were sold during the 1912 fiscal year and 210,120,568 feet during the 1911 fiscal year, leaving 82,148,435 feet on hand in 1912 and 40,584,365 feet in 1911.

### Reciprocal Demurrage Hearing April 15th

At the annual meeting of the Owen Sound Board of Trade which was held on February 7th it was unanimously decided to send a representation to the annual meeting of the Associated Boards of Trade to be held in London, Ont., on the 26th and 27th of February. The Owen Sound Board of Trade has fathered a resolution urging upon the Dominion Board of Railway Commissioners the claims of manufacturers and shippers for reciprocal demurrage from the railway companies. This resolution will be actively urged by the representatives from Owen Sound at the Associated meeting and it is expected that they will receive practically unanimous support. The Board of Railway Commissioners have decided to hear the application of the various boards of trade for reciprocal demurrage, at Ottawa, on April 15th.

### Edmonton District Operations

Timber permits were issued during the year to take out the following quantities:—

|                                       |           |
|---------------------------------------|-----------|
| Sawn lumber, feet, B.M.               | 5,877,689 |
| Bridge and culvert timber, feet, B.M. | 309,000   |
| Building logs, lineal feet            | 2,108,983 |
| Mining props, lineal feet             | 170,200   |
| Piling, lineal feet                   | 94,339    |
| Fence rails                           | 2,152,348 |
| Roof poles                            | 412,848   |
| Fence posts                           | 555,150   |
| Cords of wood                         | 1,382½    |
| Shingles                              | 25,000    |
| Railway ties                          | 1,864,364 |
| Telephone poles                       | 18,244    |

The year's manufacture of lumber was as follows:—

|                                                                  | Ft. B.M.   |
|------------------------------------------------------------------|------------|
| (a) By licensed berth holders                                    | 16,472,600 |
| (b) By permit berth holders                                      | 20,138,704 |
| (c) By portable sawmills under settlers' permits, approximately. | 10,000,000 |

### New Brunswick Timber Land Receipts

The following statement shows the receipts from timber licenses and stumpage received at the Crown Land Office for New Brunswick during the years ending 31st October, 1911 and 1912.

| Receipts                         | Year 1911   | Year 1912   |
|----------------------------------|-------------|-------------|
| Sale of timber licenses          | \$ 2,176.00 | \$ 3,145.00 |
| Renewal of timber licenses       | 81,206.00   | 80,708.00   |
| Transfers of timber licenses     | 644.00      | 4,037.00    |
| Stumpage                         | 367,679.14  | 339,604.18  |
| Total from licenses and stumpage | 451,705.14  | 427,494.18  |

The total receipts of the office were \$522,399.66 in 1912, and \$528,439.04 in 1911. The decrease for the year 1912 was therefore \$6,039.38. In addition to the above receipts for the year 1912, there was received \$1,495.25 from instalments on lots in the Blue Bell Tract; also the sum of \$19,366.75 received from the Commissioners of the Transcontinental Railway for the right of way through the Crown lands of New Brunswick.

Total ... 46,611,304

### Output of Saskatchewan Increased

The output of the lumber mills of the province of Saskatchewan during the year 1912 showed an increase of about 35 per cent. over those of the year 1911. Five new planing mills or sash and door factories were established in the province during the year with a combined capital of approximately \$200,000. The Big River Lumber Company with a capital of \$2,000,000 had its first full season during 1912, and the value of its product was estimated at \$1,000,000. Of twelve mills whose returns have been presented in detail, no less than eight made permanent additions to their plants during the year.

Hon. W. R. Ross, Minister of Lands for the Province of British Columbia, has announced that the force of fire wardens in the Province is to be greatly increased during the present year.

## SUMMARY STATEMENT of Foreign Merchandise Imported into Canada, &amp;c.

| ARTICLES.                                                                                                                                                 |  | TOTAL IMPORTS. |         | ENTERED FOR HOME CONSUMPTION. |         |           |                      |        |         |               |        |          |          |           |                 |

Table showing imports of wood and manufactures of wood during fiscal year ending March 31st 1912

## Newfoundland's Rapid Development

English and United States Capital Following  
Harmsworth and Reed to the Ancient Colony

Within the last three years there has been a great development in the pulp and paper industries of Newfoundland. The movement was started by Lord Northcliffe, who established the Anglo-Newfoundland Development Company, secured from the Government immense timber limits and lands and erected one of the finest pulp and paper mills in the world. Other British interests have followed this example, and Americans are now taking a hand in acquiring timber limits. In an interview on this subject with a representative of the Canada Lumberman, Mr. W. H. Taylor, who was for 11 years connected with the Crown Lands Department of Newfoundland, and who is now engaged in dealing in timber limits, stated that the entire limits have now been granted by the Government. These grants were formerly open to anyone who was willing to make the necessary application, and pay \$4 per square mile, with an annual payment of \$2 per square mile. In addition, the Government levies a tax of 50 cents for every 1,000 feet of lumber which is sawn, but no extra tax is levied on pulp. The lease is for 99 years, and imposes no limit on the quantity of lumber which can be cut.

The lumber consists mainly of spruce, fir, and pine, the fir being of a special quality, which is very suitable for making into pulp. Most of the lumber is small; spruce from 12 to 14 inches is utilized as lumber, and from 4 to 9 inches as pulp wood.

Following the Lord Northcliffe venture, many limits were taken up, and last year witnessed a notable awakening to the possibilities of Newfoundland as a pulp producing country. The Northcliffe mill is the most important, the limits amounting to 2,500 square miles. The next in importance is that owned by Albert E. Reed and Company, of London, England, these limits totalling 1,250 square miles. Another large mill is being started on the Gander River by a United States Company, owning 550 square miles, while a further project is under way at Deer Lake, which will be operated by United States capitalists, who own 450 square miles. The Bay du Nord Corporation also propose to build a large mill, and as they own 600 square miles it is probable that the proprietors, who are mainly British, will do much to develop their district. In addition to these companies

Table showing imports of duty free goods

directly interested in pulp propositions, there are a number of lumber mills. The Northcliffe mill is the only one to manufacture paper as well as pulp. The mill was started about three years ago. Reed & Co., commenced in 1911; and the others came in last year.

Mr. Taylor spoke enthusiastically of the prospects of Newfoundland becoming a large pulp producer. Newfoundland pulp, he says, will produce a sixth more paper per cord than any other pulp. There is little fear of the supply of spruce being exhausted, as there are immense quantities of it, and it grows fairly quickly. It was at one time believed that wood which had been burned over was practically useless, but at the Northcliffe mill 50 per cent. of the pulp is made out of this description of wood.

According to Mr. Taylor, pulp can be manufactured very economically. There are abundant water-powers—all the mills are run by water—labour is fairly cheap, and most of the lumber is situated close to the mills. A drive of 25 to 30 miles is considered a long drive. The establishment of the industry has given employment to many men, and has kept many of them at home, who probably would otherwise have gone to the United States.

## Newfoundland Business Prospering

### Lumbering Operations Becoming Centralized in a Few Strong Firms—Pulpwood Business Developing Rapidly

St. John's, Newfoundland, January 11th, 1913:—There is a strong feeling of confidence in the Island as a result of a highly prosperous year. General conditions are determined by the extent to which the fisheries of the Island are successful. All other industries here are more or less dependent upon good fisheries for their prosperity. What wheat is to Canada, codfish is to Newfoundland.

While the cod fishery for 1912 did not yield more than an average in volume, the prices were good and the returns, consequently, remunerative.

The lumber and pulp industries contribute considerably to the general prosperity, for they make a very material contribution to the general trade and exports of the island. Most of the lumber produced is consumed in the island, but some shipments of spruce and white pine find their way to South America and New York. The winter of 1912 proved a most trying one here to lumbermen. Beginning with the year, one snow storm followed another in quick succession until snow was piled up in the woods to a height of four to eight feet, making logging operations very expensive, and, in some quarters, impossible. To add to the difficulties, the railway system became entirely submerged in snow and was inoperative for months. Some logging operations dependent upon the railway for supplies were consequently in sore straits, especially for horse feed. The cost of logging increased fifty per cent. and the cut was considerably reduced. An increase in local prices was the lumberman's only hope, and this he succeeded in securing to the extent of two or three dollars per thousand on the average. Consumption has apparently slackened somewhat in consequence. Nevertheless, the end of the year shows smaller stocks than usual, and in some quarters scarcity of lumber, so that prices remain firm at the advance with a tendency to increase.

The winter of 1913 has opened well for logging and operations have been in busy progress since October. There has been a fair amount of frost, sufficient to harden the marshy country and give a good ice surface on the lakes, while there is not more than a foot of snow usually to be found up to the time of writing.

### Operations Becoming Centralized.

The cut of saw logs for 1913 will not be heavy as in former years. Some of the larger lumbering operations are turning their attention to pulp while the smaller mills have not usually received adequate management and have had to drop out of the race in many instances. The operations are tending to be fewer in number and the industry to be concentrated in the hands of the few successful mill men, where formerly a large number of small and somewhat inefficient plants were in evidence. The general increase in wages owing to successful fisheries and multiplication of industries, with consequent demand for labor, have contributed to bring this about.

The Deer Lake Lumber and Pulp Company, of the West Coast has ceased to manufacture lumber, and gives its entire attention to pulp. The Henry Patton Company, of Norris Arm, have sold out their forests to the Central Forests Company, who will utilize their holdings for pulp wood, supplying the A. E. Reed Company's big pulp mill at Bishop's Falls. The Horwood Lumber Company have added a pulp mill to their operations and are logging pulp wood and saw logs at Campbellton.

The export of ground wood pulp is already a good second in value of exports, and bids fair to run a close race with the fishery itself for first place in the near future. The first pulp mill to be erected was

that built by the Anglo-Newfoundland Development Company, in 1905-8. This is one of the largest in the world and has been the means of creating a town of considerable importance.

The wood of the island is admirably adapted for pulp manufacture, while its rivers afford magnificent water powers. The year 1913 promises a good measure of success for both lumber and pulp in this little country. It has been called a country of fogs, dogs and logs, while being chiefly famous for the first two mentioned in the past, but likely to be best known for the latter in the future. Emigration from the island is now more than covered by exiles returning, or immigrants arriving, and the the labour market is so good that outside labour must shortly be sought to man all the industries calling for help.

Canadian Exports During Fiscal Year Ending March 31st. 1912

### Personal News of Interest to Lumbermen

Mr. William Rutherford, of William Rutherford & Sons Company, Limited, has been elected a director of the Montreal Builders' Exchange, as representative of the lumber and mill interests.

Lumber interests will be well represented on the City Council of Westmount, P.Q. Mr. John McKergow, president of the Montreal Lumber Company, has been elected mayor by a majority of 434, while Mr. W. K. Grafftey, managing director of the same company, has been elected an alderman, being second on the polling list.

Messrs. Hugh Davidson, manager of the Hastings Shingle Manufacturing Company, Vancouver, B.C., and T. F. Paterson, of the Terminal Lumber & Shingle Company, Vancouver, B.C., visited Seattle, Wash., on Jan. 10, 1911, and met with the members of the Washington Shingle Manufacturers Association, where they represented the British Columbia industry.

Mr. W. K. Trower, for several years secretary-treasurer of the Riordon Paper Company, Limited, Montreal, is a member of the new real estate firm of Short and Trower, Limited, which has just purchased the business of Robins, Limited, Toronto and Montreal, real estate dealers. Mr. Trower left the Riordon Company to become Vice-President and general manager of Robins, Limited, at their head office in Toronto.

The Goodyear Lumber Company, Buffalo, N.Y., have secured the services of Mr. J. D. Stewart to represent them in Western Ontario, with headquarters at Sarnia. Mr. Stewart was formerly in the service of the Spanish River Lumber Company at Sarnia. He will cover the territory west of Hamilton. Mr. A. G. Rolston will continue with the Goodyear Lumber Company and will look after the territory of Hamilton and the east, including Montreal. Mr. Rolston will be located at Toronto.

### J. M. Diver's New Departure

The Yeomans-Diver Company, Detroit, Mich., have added a wholesale lumber department to their business. The new branch will be under the management of its President, John M. Diver who, prior to 1901 was connected with the old Cleveland Saw Mill and Lumber Company of Cleveland, Ohio, and recently resigned as Vice-President and General Manager of The Cleveland-Sarnia Saw Mills Company, Limited of Sarnia, Ontario, which he founded in 1901. The company intend to handle all kinds of lumber from the Southern and Western States as well as white pine, Norway and spruce from Canada, special bills, dimension timber; lath and shingles. Mr. Diver is well known to the lumber trade throughout the United States and Canada. The success which he has attained in the past is an assurance that this branch of the company will be welcomed by their many business friends.

The Yeomans-Diver Company is well known in the city of Detroit as one of the largest box corporations in the State, manufacturing boxes, box shooks, crates and crating. This branch of the business is under the supervision of Fred H. Yeomans, its secretary and treasurer, a life-long resident of Detroit, who has for years successfully handled the box business in the city. The company's property is situated at the foot of Lieb street, on the river, covering an area of about four acres. Its plant, located at 274 to 290 Wight street, with building built of brick four stories high, is 250 feet long by 100 feet

wire, with a power plant of 500 horse-power. The company have splendid dock facilities as well as railway connections, a switch running directly into their yard.

### The Pulp Position in Quebec

The scope of the recent Order-in-Council removing the embargo on the Crown lands of Price Bros., the Wayagamack, Laurentide and Belgo-Canadian Companies is not nearly as wide as is generally supposed. The text of the order, given below, makes it clear that only a portion of the limits of the companies concerned is affected by the decision of the government. It will also be seen that the order is retroactive, covering the spruce in stock at the date of the order.

It is taken for granted that no wood will be allowed to be exported to the United States, and it is questionable whether any pulp will be sold by the concerns named to be shipped across the border. Those companies which are not included in the order believe that they are being discriminated against, and consider that they have been dealt with unfairly. Each man looks at it from the standpoint of how he is affected by the order, but it is certain that the Gouin Government are extremely desirous of fostering the paper and pulp industries, and that their action was dictated by a desire to develop the province's resources.

The Order-in-Council reads as follows:

"It is ordered that the obligation to manufacture in Canada any timber cut on Crown lands, as enacted by article 13 of woods and forests regulations, shall not apply to the timber cut from the first day of May, 1911, and which will be cut hereafter on the timber limits hereinafter described; and that all pulp wood cut from the first day of May, 1911, or which will be cut hereafter on the said limits, or the paper, paper board, or wood pulp manufactured from the wood cut on such timber limits, may be exported free of any export duty, or any other charge of any kind whatsoever, or any prohibition or restriction in any wise relating to such exportation:—

The National Hardwood Lumber Association report that during the year 1912 their increase in inspection work exceeded all previous records. Their inspectors handled, during the year, 171,823,339 feet of lumber. During 1911 the total was 126,360,448 feet. There was a gain therefore during 1912 of 44,462,891 feet. During the month of December, 1912, the inspections totaled 15,890,954 feet, an increase of 5,275, 753 feet over the total of December, 1911.

A prominent New Brunswick operator and exporter in a letter to the Canada Lumberman under date of January 16th says: "We have had practically no snow in the southern part of New Brunswick and Nova Scotia up to this time of writing, and while there have been considerable logs yarded, it looks very blue for the hauling, although February and March may turn out much better than we anticipate. Owing to these weather conditions, it is difficult to say what the cut will be this present winter."

J. M. Diver, Detroit, Mich.

Plant of Yeomans-Diver Company, Detroit, Mich.

# Machinery Companies All Prospering

## Manufacturers Report a Record Year's Business and Orders a Long Way Ahead—Outlook Better Than Ever

Machinery and equipment manufacturers and dealers, who are interested in the lumber manufacturing industry had during 1912, the best year in their history and are looking for a still better trade during 1913. The following letters tell their own stories forcibly:—

### Prosperity Likely to Continue

Editor Canada Lumberman:

Hamilton, January 21st, 1913.

Our business has shown a very considerable increase during 1912, and might have shown more if it had not been for certain labor conditions, transportation conditions, and the difficulty in getting a supply of raw material, but on the whole we are very well satisfied as we think we are more fortunate than a great many other manufacturers and were not affected as badly as we would have been had we not taken every precaution early.

We see no reason why the present prosperity should not be maintained, on the other hand we think that the conditions are such, owing to the extensive railroad construction, prosperity of the West, with the large immigration, that any manufacturing concern in hardware or allied trades that does not prosper during 1913 must look within themselves for the reasons. We believe that any business with reasonable care and attention will prosper during the 1913 year, and the only thing that would prevent it would be mismanagement or disaster.

We are making large extensions in those departments calling for increased output, and the increased capacity we will have in these departments should more than look after any increase in demand that may be made upon them. While we do not anticipate any large increase in prices, we think that the trend will be for higher prices. With the tremendous demand there is and will be for goods, and some lines being sold too low, prices must stiffen.

The B. Greening Wire Company, Limited.

### A Great Future to Expect

Editor Canada Lumberman:

Montreal, January 15th, 1913.

The year just closed was the largest that we have ever experienced. We think that the present year will be even greater than the past year has been. We do not see any reason why Canada should not become one of the greatest producing countries, of all kinds of manufactured articles, more particularly the kinds that are produced from the raw material that is found in various parts of this country.

One of the matters that we think every individual in this country should be interested in, and upon which the writer thinks the "Canada Lumberman and Woodworker" should always try to appeal to the general public, particularly the children, is, the "Conservation of the Forests." The boy scout movement should be taken up very seriously, and woodcraft, which is one of the subjects to which they pay particular attention, should be encouraged as much as possible. We think that your paper should be one of the leading spirits along this line, and that these articles appealing to the general public should be able to increase your circulation outside of the woodworking trade.

Sadler & Haworth.

### Good Markets Expected to Continue

Editor Canada Lumberman:

Saginaw, Mich., January 16th, 1913.

During the early part of last year business was rather restricted, but the improved conditions that prevailed at the end of the year fully made up for anything lacking previously.

Our business during the last three months of 1912 exceeded any similar period for a good many years back and our orders for shipment into the Dominion of Canada far exceeded in volume any previous record. We have more orders for Canadian shipment to-day than ever before. As to the future, we are very sanguine in believing that the current year will be a very satisfactory one to all business interests. There seems to be an indication of continued activity within normal limits and with anything like an average crop no one who has anything of merit to dispose of in the machinery line will have any difficulty in finding a market.

Wm. B. Mershon & Company.

### Exceeded Their Fondest Hopes

Editor Canada Lumberman:

Woodstock, January 16th, 1913.

The year 1912 exceeded our fondest hopes and expectations as we were able to sell more Linderman Dovetailers during the first year of our existence than we had really expected to and in fact, reached the highest figure that we had anticipated when we erected our plant. The year 1913 starts off very auspiciously, and we expect to increase our 1912 business by at least thirty per cent. It was the general opinion throughout the lumberman manufacturers in the country that we were foolish in erecting a factory here as they thought the country was not of sufficient size to warrant it, but we had faith in Canadian growth and see nothing on the horizon at the present time to cause any worry or doubt.

Canadian Linderman Company, Limited.

### Everything Looks Healthy

Editor Canada Lumberman:

Rochester, N.Y., January 20th, 1913.

The prospects for 1913 are good. Everything seems to be in a healthy condition. People have given up the idea that politics, or a change in politics makes much difference in business, and with the energies put into business that sometimes are lost in hesitation, there is no reason why business should not continue to be good, so that 1913 shall be a very prosperous year.

Morgan Machine Company.

### Six Months' Orders Ahead

Editor Canada Lumberman:

Montreal, January 17th, 1913.

We have enjoyed a very successful 1912, and our orders on hand, unfilled, will carry us well through the next six months. We look forward to a great demand in the iron and steel industry during 1913, both in raw materials and second hand equipment. On account of unsettled conditions in the United

States at the present, considerable material is being imported into Canada, in our line, which tends to place local offerings at a discount, which really should not exist, but as soon as our friends, the U.S.A. settle their tariff question, we feel confident that prices will be more firm and the demand greater, as consumers are not inclined to place large orders until tariff matters are settled.

Sessenwein Bros.

### Secured Its Share of Expansion

Editor Canada Lumberman:

Toronto, January 17th, 1913.

The business for the year 1912 all over the Dominion of Canada was of exceptional volume, and the Hoyt Metal Company in particular was very fortunate in securing its pro rata of this natural increase. Our total gain in tonnage for the year 1912 over 1911 was 45.5 per cent, and from all indications for the year 1913 we feel we are in a fair way to duplicate the gain made in the past year. Every manufacturer must feel encouraged by the fine outlook for business for 1913, in fact for years to come. We can in no way see a cloud on the horizon which will interfere with the rapid development which Canada is now experiencing.

Hoyt Metal Company.

### Expecting a Good Increase

Editor Canada Lumberman:

Toronto, January 21st, 1913.

Our 1912 business compared favorably with 1911. As for 1913, from present indications and the result of business to date, we anticipate a material increase. In fact we have in hand now, 40 per cent. more business than for the corresponding period of last year, taking into consideration that our fiscal year commences December 1st., and the period spoken of is seven weeks. The changes made in the mechanical end of our business, and the improved quality of goods, which we are manufacturing, warrant us in making the statement that we expect the year 1913 to be a banner year in every respect.

Henry Disston & Sons, Limited.

### Twenty Per Cent. Improvement During 1912

Editor Canada Lumberman:

Montreal, January 21st, 1913.

We have found business in the year 1912 over 20 per cent. better than any previous year and about 40 per cent. better than the year 1911. Orders have been generally for new stock and extension, and we have found collections very good indeed. Prospects are very good for the year 1913, and we have provided for same by doubling our capacity. Orders already booked will provide work for the next six months and enquiries since the opening of the year indicate that the volume of business to be booked is larger than ever.

B. J. Coghlin Company, Limited.

### 1913 Looks Good to Them

Editor Canada Lumberman:

Saginaw, January 17th, 1913.

Our business in sawmill machinery for the year of 1912 was very satisfactory indeed, running considerably above that of 1911. During 1912 our gangs were placed in commission from near Halifax to Vancouver Island. We find a greatly increased interest in this method of manufacturing lumber, particularly in districts where the timber is valuable and the buyers exacting. 1913 looks good to us. The underlying conditions are good in both Canada and the United States, and we believe we are due for twelve months of even greater prosperity than in 1912.

Wickes Bros.

### Expect Greatest Year in Their History

Editor Canada Lumberman:

Orillia, January 14th, 1913.

We have found the year 1912 very much better than 1911. In fact, had we not been in our new factory with increased and improved facilities for manufacturing, we would not have been able to handle the business for 1912 at all. We are, at the present time, working our plant up to full capacity, and while there is no way of telling definitely what the present year may bring forth, if the present conditions are any indication, we would look forward to the greatest year in the history of our business.

The E. Long Manufacturing Company, Limited.

### Sales Showed a Big Increase

Editor Canada Lumberman:

Vancouver, B.C., January 21st, 1913.

We found business during 1912 much better than during 1911, our sales showing a big increase. We anticipate a still bigger year for 1913, as we not only find a more hopeful tone among the lumberman, but we have already received a large number of orders for delivery in February and March. In fact we have more work on hand that we have had for the past three years, at this time of the year. From our salesmen's reports, we believe the lumbermen are also making preparations for a better year than for the past two years.

The A. J. Burton Saw Company, Limited.

### Good Times Ahead Also

Editor Canada Lumberman:

Milton, Pa., January 16th, 1913.

We have closed out a very satisfactory year and a larger number of cutter heads have been sold in Canada than in any previous year. The prospects for 1913 are opening up very satisfactorily, and we have every reason to believe that the business will continue to be as large, if not larger, in volume than last year.

Samuel J. Shimer & Company.

### Sales Increased Fifty Per Cent.

Editor Canada Lumberman:

Montreal, January 15th, 1913.

Closing our year 1912 we found that our sales had increased some fifty per cent., which is, we consider, a very good demonstration of our opinion of the 1912 business, and incidentally shows that our brand of belting is being recognised more and more each succeeding year. Regarding 1913 from indications we see no reason why everyone should not have a successful year, everybody seems very optimistic and apparently trade is upon a good sound basis and the new industries now going up and contemplated are backed by good financial,

well-known, successful men without any of the "mushroom" growth of the past. Our campaign for the coming year will be based upon the old lines and our principal is to give good satisfaction, prompt delivery, and we shall be well satisfied if we equal our past performance.

F. Reddaway & Company.

#### Prophets Were Justified

Editor Canada Lumberman: Hamilton, January 14th, 1913.  
Business during 1912 has been quite satisfactory. Prophets usually are not honored in their own country, but in Canada this has been an exception, because those that prophesied prosperity for 1912, found it, and almost everybody is prophesying a greater 1913, so we are inclined to join with the optimist.

E. C. Atkins & Company.

#### One of the Best Years They Ever Had

Editor Canada Lumberman: Montreal, January 16th, 1913.  
Our experience for the year 1912 was that it was one of the best years we have ever had. While not being very much better than 1911, there was an improvement, and the present outlook for 1913, it would seem, would be equally as promising.

The Dominion Wire Rope Company, Limited.

#### Forty Per Cent. Improvement in 1912

Editor Canada Lumberman: Williamsport, Pa., January 17th, 1913.  
We think the year 1913 will be a most prosperous year for us. Our business in 1912 was 40 per cent. better than in 1911, and we are looking forward to a similar increase for the year 1913.

Rothfuss-Howard Iron Works.

#### Optimistic About 1913

Editor Canada Lumberman: Hamilton, January 21st, 1913.  
The year 1912 was an exceedingly prosperous one for our company, and showed a very substantial and encouraging increase over 1911. We are very optimistic about 1913, and if our outlook is at all correct, we expect to increase as much this year as we did last.

The Garlock Packing Company.

#### Expecting Continued Expansion

Editor Canada Lumberman: Ottawa, January 15th, 1913.  
Our business done during 1912 shows the same steady improvement which we have been making for the past few years. We are optimistic enough to look for another increase during 1913, and have laid our plans accordingly.

Tobin, Limited.

#### Elections Made No Difference

Editor Canada Lumberman: Salem, January 16th, 1913.  
Despite presidential political matters we found business during 1912 a great deal better than 1911, and we look forward confidently to the coming year as being the "one best yet" in our business history.

The Silver Manufacturing Company.

#### Everything Looks Promising

Editor Canada Lumberman: Cincinnati, O., January 20th, 1913.  
Our remarkably fine business during the closing months of 1912, and the large volume of prospective business now in sight, leads us to feel that the year 1913 will be an exceptionally successful one from a business standpoint.

J. A. Fay & Egan Company.

#### Showed a Substantial Increase

Editor Canada Lumberman: Elmira, January 16th, 1913.  
Our business in 1912 showed a substantial increase over that of 1911, and we are preparing for still greater things for 1913.

Elmira Machinery & Transmission Company, Limited.

### Dixon Crucible Coy's New Production Catalogue

The largest and most complete production catalogue ever issued by the Joseph Dixon Crucible Company, Jersey City, N.J., is being mailed to thousands of manufacturers, jobbers, purchasing agents and others interested in graphite, crucibles, paint, lubricants, pencils and the other productions of the Dixon Company. Though over one hundred pages of type and illustrations are used, this catalogue does not attempt to carry a full description of the Dixon line and only a few of the many hundreds of Dixon's American Graphite Pencils are listed. The Dixon Company attach a peculiar value to their production catalogue inasmuch as it serves to acquaint those who are already users of one form of graphite with its many other forms and uses. If you are particularly interested in graphite products you are invited to send for a copy of this catalogue.

### Newman Machine Company's Catalogue

The Newman Machine Company, Greensboro, N.C., U.S.A., have issued a new illustrated catalogue of their products. The catalogue is handsomely bound and extensively illustrated, providing a splendid medium of information for all who are interested in the latest forms of woodworking machinery.

### Taft Upholds Pulp and Paper Duty

A Washington, D.C., despatch, dated February 8th, says President Taft to-day denied the right of free entry from Canada into the United States of wood pulp and paper made from the timber of certain Crown lands in Quebec. The President sustained the decision of Secretary MacVeagh of the Treasury Department, that Quebec's action was not sufficient to entitle these products to free importation.

The Chicago address of James D. Lacey & Company has been changed from 1215 Old Colony Building to 1750 McCormick Bldg.

### Death of Tonawanda Pioneer Lumberman

The Late L. R. Vandervoort

North Tonawanda, N.Y., Feb. 7th.—Levant Ransom Vandervoort, junior member of Smith, Fassett & Company, one of the oldest lumber companies in this vicinity, and himself one of the best known wholesale lumbermen in the east, died suddenly on Jan. 27th at Hot Springs, Ark., where he had gone for his health. Mr. Vandervoort and the physician who accompanied him were about to leave for Palm Beach, Fla., when an attack of heart failure resulted in death. The deceased was one of the best known citizens of the Niagara frontier. He had served as mayor several terms and was always prominently identified with any movement for the betterment of civic or business conditions. He was 53 years of age and leaves a wife, a sister and a brother. Mr. Vandervoort started as a tally boy with Smith, Fassett & Company. When the late John Smith, founder with the late T. S. Fassett, of Smith, Fassett & Company, died, Mr. Vandervoort became an equal partner with Carl Smith, and was general manager of the extensive interests of Smith, Fassett & Company, which, besides lumber, includes the ownership of Tonawanda Island, where are located half of the lumber yards of the Tonawandas. He was a member of the National Wholesale Lumber Dealers' Association, the North Tonawanda Lumbermen's Association, and the Niagara White Pine Association. He was also prominent in the club life of the Buffalo city and country clubs, all of which sent representatives to the funeral. Before the deceased left home for Hot Springs, thirty lumbermen and prominent business men of Buffalo came to his home in this city and presented him with a handsome solid gold loving cup. The funeral was the largest that has ever been held in the Tonawandas.

Mr. Joseph Rodger, of Brownburg, died suddenly at Lachute, P.Q. He was at one time in charge of a sawmill at Roxton Falls owned by the late Mr. William Rutherford, later building a sawmill at West Wickham. From there he went to Sixteen Island Lake and erected a mill, which he operated for ten years.

Edward Germain, one of Saginaw's wealthiest citizens, died recently, following a two years' illness. Mr. Germain was born in Kingston, Ont., and went to Michigan in early life.

Mr. John Patterson, brother of Mr. Thomas Patterson, of the Patterson, Tilly Lumber Company, died recently at Hamilton, Ont.

### C. P. R. Extending Its Forestry Operations

Mr. R. D. Prettie, superintendent of the Forestry Department of the C. P. R., visited Fredericton, N.B. recently, and made arrangements with the Forest School of the University of New Brunswick for several of its students to spend the vacation next summer in the employ of the C. P. R. Mr. K. C. Machum, of St. John, who will graduate from the forest school this year will join the C. P. R. Forestry Department. The C. P. R.'s Forestry Department is now the largest organization of its kind in America, with the exception of that maintained by the United States government. Most of its work up-to-date has been carried on in western Canada. Plans are now being developed for the extension of its work to the province of New Brunswick.

### Canadian Western's Good Year

The Canadian Western Lumber Company, New Westminster, B.C., shipped 35,000,000 feet more of lumber to the markets of the east during 1912 than they did during 1911. According to a report from the company, the markets during 1912 were better than in any previous year. Reports from other mills in Vancouver at points on the lower mainland show that their shipments eastward were also much in excess of those of any previous year.

The Canadian Pacific Railway propose to assist lumbermen in the western provinces by extending credit on freight charges. As they have a lot of empty cars on the coast now they are prepared to accept freight from now until March 31st, and not demand payment until May 1st.

# Market Correspondence

SPECIAL REPORTS  
ON CONDITIONS AT  
HOME AND ABROAD

## New Brunswick Manufacturers Awaiting Better Markets

St. John, N.B., February 10th; (Special to the Canada Lumberman):—Very little, if any, change has taken place in the lumber situation since the first of the month. Practically no sales have been made for future deliveries, as the manufacturers do not know just where they stand in regard to getting out their logs. In nearly all the sections of the province, with the exception of the northern part, there has not been enough snow to start hauling the logs from the yards. Therefore, with these conditions, and the light stocks being held all over the provinces of New Brunswick and Nova Scotia, the manufacturer feels that he can sit down and wait for a better price. In the northern part of New Brunswick from Grand Falls and farther up on the St. John River, the fall of snow lies about two feet deep, and the lumbermen are doing good work. This applies to northern Maine also, where the lumbermen report that they will have their cut hauled to landings at about the usual time. We understand that some of the North Shore manufacturers have sold their cuts of deals, 50 per cent. 7-in. and 8-in. x 3-in., balance 9-in. and up at \$17.50 at the mill. This is the highest price at which English deals have ever sold. No further sales have taken place at St. John, although it is said that certain manufacturers who have been in the past the heaviest manufacturers of English deals at this port have sold their future season's cut at \$16 or better, but up to date it is not confirmed.

Stocks of spruce boards are very low, and what few have been sold of late have brought a price never before realized. Stocks of refuse spruce boards two and three inch, are very scarce and are bringing from 50 cents to \$1 per thousand higher than any previous prices.

Laths for spot delivery are bringing \$3 per thousand on the wharves at St. John, and contracts are being made for mill cuts at around \$2.70 per M. for delivery any time during 1913. As yet very few if any of the manufacturers here have accepted this price.

Shingles are scarce, and are bringing price advances ranging along with the advance in long lumber.

The outlook for local building is very promising, the following large buildings will be erected during the coming year: the post office, McClary Manufacturing Company building, Vassel & Company building, Bank of British North America building, and many others.

## Excellent Market Conditions at Montreal

Montreal, Feb. 10th; (Special to the Canada Lumberman):—Having regard to the season, market conditions could not be better, reports a Montreal wholesaler. This may be exaggerated, but it represents the general feeling as to business prospects. Certainly the building permits are very promising—for the month of January the Montreal total was \$458,600, an increase of \$186,110 as compared with the corresponding period last year. Probably the mild winter has something to do with the greater activity, as on some jobs work has not ceased throughout the season.

Inquiries show that prices will be higher all round this year. As anticipated, manufacturers are putting up their quotations, and although in a business like the lumber trade it is difficult to give an average, it is stated by one wholesale firm that they are paying an average of from two to four dollars per 1,000 feet on the better grades. Appearances point to a decided scarcity of stock in certain lines, particularly in spruce, and this will no doubt be a strong factor in keeping the market firm. Tariff legislation in the United States also promises to play an important part in the Canadian lumber business. So far as appearances go, the legislation will be in the direction of freer trade.

The chemical pulp market continues strong, and indications are for a decidedly favorable position as to prices throughout the year. Ground wood is still unsatisfactory, with supplies being augmented at the mills in consequence of the poor demand from the United States, where the water conditions have been, and are, very good—better in fact than for many years.

## Building Operations Extensive at Montreal

Ottawa, February 10th; (Special to the Canada Lumberman):—There is good reason for the prediction amongst lumbermen that 1913 will be a record year for the trade in Ottawa and district. Last year the building permits for the city totalled \$3,621,000, but this year they are likely to reach the five million mark, according to present indications. The government did not spend more than half a million dollars in buildings in the city during 1912. The estimates which were tabled in the House of Commons last week set aside about \$3,000,000 for buildings in Ottawa and the adjacent towns. Two million dollars are for a new block of government offices; \$250,000 for a new custom house; \$50,000 for a new drill hall; \$75,000 for additions to the Astronomical buildings, and \$100,000 for enlarging the Parliament Buildings. The number of building contracts already let by private interests greatly exceeds the amount for the same period a year ago. Naturally the lumber trade will benefit largely by this activity in building. Visits made by the correspondent of the Canada Lumberman to several important lumbermen in the city elicited the information that orders for lumber are literally pouring in. The mild weather this winter has caused the building trade to be busy, hence the demand for lumber.

Some of the salesmen of leading Ottawa firms took advantage of the presence of so many lumbermen in the city last week, during the annual meeting of the Canadian Lumbermen's Association, to put through some large sales. Among the best customers were the delegates from Toronto.

Recent arrivals from the woods say that the cold spell of the last two weeks has enabled logging to proceed with good progress in the woods. Though there is not much snow in the city and surrounding country it is said that there is a good deal in the woods.

Operations have been commenced by the Bishopric Wallboard Company, a new firm which erected a plant here recently. About 50,000 square feet a day is being turned out. The factory is located about a mile from the southerly end of Bank street and is connected with both the C. P. R. and C. N. R. lines. The wallboard the company makes is used instead of lath and plaster

and is put up in sheets, each measuring four feet square, and three eighths of an inch thick. A crate containing 16 sheets sells at \$6.40. The officers of the company are George L. Barrett, general manager; George F. Bishopric, secretary-treasurer; F. J. Balch, secretary-treasurer. The company has already received a number of orders.

George Loveday, who for some time was cashier for the Ottawa Citizen, newspaper, has joined the Greater Ottawa Lumber Company as office manager.

The automobile is replacing the horse and rig as a medium for lumbermen to get around the city. A few days ago McAuliffe & Davis bought a runabout car for the use of the chief members of their office staff.

## Tonawanda Imports Temporarily Inactive

North Tonawanda, N.Y., Feb. 7th; (Special correspondence to the Canada Lumberman).—There is less Canadian lumber coming to the Tonawandas than ever before. The chief reason is the expectation that the duty will soon be removed and buyers are waiting, where they can, to save the expected reduction in price. Canadian lumber is also holding up strong in price, which is another deterrent to extensive buying. Dealers who have been in the habit of bringing in large quantities of stock during the winter are curtailing and the shipments, which are, of course, all by rail at this time of the year, have dropped to the low record point. Most of that coming across the border now is lumber bought earlier in the year when prices were lower.

Lumbermen are looking forward with satisfaction to a probable early opening of lake navigation. The open winter has caused little ice to form in the upper lakes and connecting waters, and where a year ago there were several feet of ice, to-day there is open water nearly all the way and ice would have been no barrier to navigation as late as February 1. So optimistic are the indications that lumber dealers are counting on being able to get cargoes down from Canadian points a whole month earlier than usual. Repairs and outfitting to numerous lumber craft in the local harbor are being rushed in order to be ready for the hoped-for earlier opening.

Statistics compiled from official railway reports give the Tonawandas undisputed third place in the number of car loads of freight shipped during 1912, when 189,568 cars of loaded freight left the Tonawandas over the five trunk lines of railways. Most of this freight was lumber. In addition to the rail shipments, 82,000,000 feet of lumber was dispatched over the Erie Canal.

Mr. Jacob H. Rumbold, of this city, was re-elected president of the Empire State Association of Wholesale Lumber, Sash and Door Salesmen, which is holding its annual convention at Utica.

Captain Charles B. Lentz, commanding officer of local state militia, who has been at Sandpoint, Idaho, for three months, will shortly resign, as he has taken up his permanent residence at Sandpoint, where he has established a lumber business. He will be succeeded as captain of Company K by another lumberman, Lieut. H. Morton Jones, a member of the R. T. Jones Lumber Company of this city.

The A. Weston Lumber Company, of North Tonawanda, has sold a part of its local frontage on Niagara River to a milling company which will build the first grain elevator the Tonawandas ever had. The Weston interests at Manistique, Mich., were recently disposed of.

The Enterprise Lumber Company and the Van Slyke Silo Company have been merged into what will be known as the Enterprise Lumber & Silo Company, of North Tonawanda. The new company has filed a certificate of incorporation and will have a capital stock of \$25,000. The officers of the new company are W. H. Griffin, president; M. J. VanSlyke, vice-president, and C. Roy Phillips, secretary and treasurer. The Enterprise Lumber Company recently completed the erection of a shed 100 by 100 feet for the storage of lumber. The new company has moved into new offices in the North Tonawanda Post Office building.

Irenus Batt, treasurer of Batt Brothers Lumber Company, of this city, died at Ashland, S.C., last Friday. He had been ill two years with pulmonary tuberculosis. The body was brought home for burial yesterday.

## New Pembroke Company Operating Extensively

The Petawawa Lumber Company, Pembroke, Ontario, which was organized about a year ago is taking out about 100,000 cubic feet of waney timber of particularly choice quality during the present winter and also about 10,000,000 feet of logs. The Petawawa Lumber Company is composed as follows; R. Booth, president, J. Smith, vice-president, George Gordon, treasurer, W. R. Beatty, secretary, W. D. Lummis, A. B. Gordon and W. F. Bartlett, directors. The mills of the company are located at Pembroke, Ontario, and its limits are on the Petawawa River.

# WANTED & FOR SALE DEPARTMENT

## PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (\$2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclosing ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

## Wanted—Lumber

### Box Factory Lumber

When you have any box lumber to offer, write us, giving quantity, description and price Chicago, delivered either water or rail. Chicago Mill and Lumber Company, Chicago. 1-4

### Wanted

Three thousand feet of good Canadian Oak, all cut 4/4 in. Shipment any time within ten months. Address Box 693, Canada Lumberman, Toronto, Ont. 3-6

### Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Box Co., Ltd., Toronto, Ont. 7-17

### Wanted

500,000 ft. Maple squares 1 1/4-in., 1 1/2-in., 1 3/4-in., 2-in., 2 1/4-in. and 2 1/2-in. Any length from 12-in. up. Car lots and upwards. M. Mitchell, P. O. Box 204, Lucknow, Ont. 2-5

### Wanted

Cedar Posts, cut from green timber, 8 and 9 feet long, in car load lots, peeled or unpeeled, any quantity. Apply stating size and quantity to Box 688, Canada Lumberman, Toronto, Ont. 3-7

### Wanted

1 1/2-in. x 1 1/2-in. x 4 1/2-ft. S. G. White Ash. 1 3/4-in. x 1 3/4-in. x 4 1/2-ft. S. G. White Ash. 1 1/2-in. x 1 1/2-in. x 43-in. Ash, Maple or Birch. 1 1/4-in. x 1 1/4-in. x 43-in. Ash, Maple or Birch. Quote price, F.O.B. Leamington. Erie Basket Co., Ltd., Leamington, Ont. 3

We use yearly five hundred thousand to one million feet of Birch, Basswood and Ash in our business and are open to contract with responsible mill men for same. We would be willing to advance money on the logs and also on lumber as sawn. Write us, Manufacturer, Box 619, Canada Lumberman, Toronto, Ont. 20-37 T.F.

### Wanted

50 M. ft. 1"x10" and up, 1st and 2nd Birch. 200 M. ft. 1"x12" and up, Soft Elm. 200 M. ft. 1" winter sawn White Basswood. 100 M. ft. H. Maple Piano Rails, in pairs, 1 1/4"x2" and 1 1/2"x3", all 48" long. For top cash prices for any quantity. Apply Robert Bury & Co., 79 Spadina Ave., Toronto, Ont. 4

### Birch Wanted

Want 200 M. ft. 10/4 1st and 2nds and No. 1 Common Birch. Give average widths and lengths and percentage of 14 and 16 ft. lengths. Want price delivered Philadelphia, Pa. and New York City.

Want 200 M. ft. 6/4 No. 1 Common Birch delivered Boston, Mass.

Want 5 cars 4 1/2 in. and 5 in. 1sts and 2nds. Birch delivered New York City and Philadelphia, Pa. Reply Box 528 Canada Lumberman, Toronto, Ont. 14 T.F.

## LUMBER

When you have any kind of lumber and lath to offer or logs for sale, send us a description and prices. The Turner Lumber Company, Limited, 25 Toronto Street, Toronto. 4-7

### Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

### Wanted

We want 1,000,000 ft. 16/4 Birch, No. 1 Common and better. 250,000 ft. 10/4 Birch, No. 1 Com. & Bet. For delivery during 1913. State whether lumber is band sawed or circular sawed, percentage of 14 and 16 ft. lengths, whether it is a narrow, medium or wide run, what percentage is No. 1 Common and your best spot cash prices. We are in the market for all kinds of Hardwood lumber for spot cash. Box 690, Canada Lumberman, Toronto, Ont. 3-6

### Hardwood Pickets Wanted

Beech, Birch and Hard Maple.

- 1 x 1 x 42.
- 1 x 1 x 48.
- 1 x 1 1/2 x 42.
- 1 x 1 1/2 x 48.
- 1 x 1 3/4 x 42.
- 1 x 1 3/4 x 48.

Require Thickness, 1 1/16-in. Plump. Quality—Free from all defects.

Can take delivery of green or dry stock. Apply to The Canada Wood Specialty Co., Ltd., Orillia, for full particulars, price, etc. 24-1-TF

## For Sale—Lumber

### For Sale

About 23,000 ft. of Oak Corbels, 6-in. x 10-in., 8-in. x 14-in. and 8-in. x 16-in., 12/16 ft. long; square edge and sound timbers. Massey Harris Company, Limited, Toronto, Ont. 1-6

FOR SALE.—One Hundred Million Choice British Columbia Timber. Cheap. No cash required. Terms over ten years. Excellent lumbering chance. Wire for particulars. John Sanders, 964 Seventh Ave. West, Vancouver. 2-5

### For Sale

200 M. ft. Hemlock. Can be cut to order. Several cars telephone poles; also square Birch, Beech, Maple and Elm from 3 x 4 to 10 x 10, 10 to 16 ft. long or longer. 4 ft. slab wood and sawdust. Hall Bros., manufacturers and wholesalers, 174 Mutual street, Toronto, Ont. 24-98 t.f.

### Lumber For Sale

400,000 ft. 3 x 7 and up Merchantable White Pine. 200,000 ft. 2 in. Merchantable White Pine. 200,000 ft. 1 1/4 in. Basswood, Log Run. 500,000 ft. Hard Maple, 1 in. to 4 in. Apply to

GEO. C. GOODFELLOW, Montreal, Que.

## For Sale—Machinery

### Steam Engine and Matcher

One Morgan Box Board Matcher in good condition, \$225.00. One only Erie Side Valve 20 H.P. Steam Engine, used only a short time, price \$150.00. S. & H. Bordridge, Ottawa, Ont. 3-6

### Saw Mill For Sale

Huntsville Lumber Company, Limited, will in the future only run one of their two double cutting Band Mills, which is now cutting fifty thousand feet per day.

They will sell the same with engine, boilers and all other machinery along with building. Also will sell blacksmith's tools and a number of saw-log sleighs and chains.

Huntsville Lumber Company, Ltd., 22-42 T.F. Huntsville, Ont.

## For Sale

Iron work for Bolting Saw, all new. Address Box 705, Canada Lumberman, Toronto, Ont. 4-5

## For Sale

One fore and aft, compound, direct acting, surface condensing Marine Engine. High pressure cylinder, 14 1/4-in. diam. Low pressure cylinder, 26-in. diam. Stroke 18 inches, with condenser attached. In first class order. Apply Saint John Iron Works, Limited, St. John, N.B. 1-4

## Bargain in Surfacers and Matcher

For Sale, one first class Surfacers and Matcher, "Cowan," three cylinders, boring attachment, has been in use for five years only, does first class work either in soft or hard woods. The machine is actually in operation and can be seen at any time of the week. Would sell it cheap, nice opportunity for the man who wants a good machine at cut price. For further particulars, apply to T. Prefontaine & Co., Corner Charlevoix & St. Patrick, Montreal, P.O. Box 2097. 4-5

## Mill For Sale

We have for sale a mill composed of the following machinery:

- 1 Band Mill, 8-ft. Wheel.
- 1 20-ft. Log Carriage, 3 48-in. Blocks.
- 1 Steam Feed, Steam Nigger, Steam Log Loader.
- 1 Upright Band Resaw.
- 1 Horizontal Slab Resaw, 60-in. x 8-in. wheel.
- 1 6 Saw Murray Edger.
- 1 9 Saw Automatic Trimmer.
- 1 5 Saw Slab Slasher.
- 1 Refuse Burner.
- 1 Lath Machine.
- 1 Lath Bolter.

Filing Room Machinery and other Machinery necessary for complete Saw Mill.

Write for complete inventory. Will be sold cheap.

BAYFIELD MILL CO., Bayfield, Wisc. 2-5

## Wanted—Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

Position wanted as band sawyer. References. Box 700, Canada Lumberman, Toronto, Ont. 3-4

Double cut band or circular sawyer open for engagement coming season. Best of references. J. Mercer, Parry Sound, Ont. 4-9

WANTED—Position as saw mill foreman or manager by an experienced, sober, and reliable man. Box 709, Canada Lumberman, Toronto, Ont. 4-7

Position wanted by first-class band saw filer, double or single cut. Fifteen years experience. Gilt edge references. Box 708, Canada Lumberman, Toronto, Ont. 4-7

A practical sawmill man wants situation in charge, either building or operating, or would contract season's cut, 25 years experience. Address Millwright, 234 Liverpool Street, Montreal, P.Q. 4-5

A thoroughly competent hardwood inspector, used to road, with large experience in American shipments, and also considerable buying experience in Ontario and Quebec, would accept a position with some good company as a buyer and inspector. Permanent position desired. Apply to Box 707, Canada Lumberman, Toronto, Ont. 4

## Wanted—Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents

WANTED—First-class lumber salesman. State salary expected, experience and age. Apply Box 678, Canada Lumberman, Toronto, Ont. 2-5

WANTED—An experienced shipper who knows grades of white pine, hemlock and hardwood. Apply Box 710, Canada Lumberman, Toronto, Ont. 4-7

WANTED—Two Band Saw Setters, two Edgermen; two Trimmermen. Must be first-class experienced men. Mill starts in April. Prince Albert Lumber Company, Limited, Prince Albert, Sask. 3-5

WANTED—Shop Superintendent for modern woodworking plant, must be good figurer and experienced in manufacture of sash, doors and general mill work. Apply Merkle Bros., Ltd., Casselman, Ont. 4-5

New Pulp and Paper Mill, using about 60,000 cords of wood per year, require the services of a first-class man to take charge of their lumbering operations. State wages required, references, etc., Abitibi Pulp & Paper Co., Ltd., Iroquois Falls, Ont. 3-5

WANTED at once, competent, experienced hardwood lumber shipper for road work. Must be strictly temperate and a pusher. Do not apply unless you know grades accurately. Manufacturers Lumber Company, Ltd., Stratford, Ont. 4-5

WANTED—A thoroughly, all-round Hardwood man with highest credentials, to take charge of a Wholesale Lumber Department, handling about twenty million feet per year. Must understand buying and selling, and know the Ontario trade thoroughly. Splendid opening for the right man. Apply Box 692 Canada Lumberman, Toronto, Ont. 3-4

## Business Chances

### Wanted

A party with a portable saw mill to saw about half million feet of saw logs, or we might buy a portable saw mill ourselves. For particulars address Geo. Neibergall & Son, Parry Sound, Ont. 4-6

### Opportunity

Best opening in Northern Ontario, on Porcupine Branch, for man with saw mill and some cash. Best of timber close for ten years. Good market. Address John Armstrong, Connaught Station, T. & N. O. Ry. 4

### Timber Limits For Sale

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest, if your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. 11

### Mill Site and Timber For Sale

Eleven hundred acres (deeded) well timbered, surrounding Raft Lake, Seven miles from Novar, Ont. Excellent winter road.

Also four hundred acres (deeded) well timbered, four miles south of Ravensworth, Ont.

Each of the above properties will be sold on easy terms. Address Box 711, Canada Lumberman, Toronto, Ont. 4-7

### For Sale

Established Lumber Business, with first-class mill, now running full time. Timber limits with 20 to 30 million feet of standing pine timber, conveniently located, and all merchandise, etc. Price \$55,000. This is worthy of investigation. Address Box 332, Canada Lumberman, Toronto, Ont. 19-22-t.f.

**For Sale**

Must be sold—\$2000 off—planing, saw and chop mill. Full particulars apply to John McCormick, Lawrence Station, Ont. 4-5

**Sawmill For Sale**

If you want a snap and are open for business in the above line with large or small capital, write Box 200, Warren, Ont., for particulars. 4-5

**For Sale**

Large quantity mixed timber covering fifteen hundred acres, from one to three miles from G. T. R. siding, Parry Sound District. Address Box 206, Parry Sound, Ont. 3-4

**For Sale**

Saw Mill and fifty-three miles timber limits in County of Bonaventure, Quebec Province. For further particulars apply to J. D. Sowerby & Co., Oak Bay Mills, P.Q. 22-7117

WANTED—Contractors with saw mill, capacity not less than 35 M. per ten hours. Timber all pine, averaging about ten to M. logs delivered at mill ready to start at once. Site situated on main line railway one hundred and fifty miles east of Winnipeg, Canada. Good proposition. Apply W. L. McIntosh, Suite 4, Lilac Apartments, Winnipeg, Canada. 4-5

**A Bargain**

About 400 acres choice Hardwood Timber, Basswood Elm, Maple, Ash, Oak, Birch. Estimate 2,000,000 ft. Two miles to railroad, easy to take out. Price \$6,000, half cash, balance one year, or \$5,800 cash. Worth twice the price asked but must be sold. Box 691, Canada Lumberman, Toronto, Ont. 3-4

**Opportunity**

Planing Mill for sale—one of the best planing mill properties in Ontario situated in the City of Peterborough with a population of 20,000, and only two mills. Easy terms. Inspection of proposition invited. Apply to The Peterborough Planing Mill, Peterborough, Ont. 3-4

**Wanted — To Buy a Good Timber Tract**

Of White and Norway Pine, Hemlock and Spruce. Would consider buying first-class running operation. In replying, give full details of what you have to offer and your lowest price and terms. Address Box 615, Canada Lumberman and Woodworker, Toronto, Ontario. 3-4

**AUCTION SALE OF VALUABLE TIMBER LIMITS**

The co-partnership of "Klock & Brother," for the purpose of winding up their business, will, subject to a reserved bid, offer for sale by public auction at Fraser Bros.' Auction Rooms, No. 453 St. James street, in the City of Montreal, on the 8th of April, 1913, at the hour of three o'clock in the afternoon, those valuable timber berths on the Manouan Branch of the Lievre River, in the Province of Quebec, bearing the numbers 3, 4, 5, and 6, and comprising 196 square miles, more or less. . . . Terms: one-third of price payable in ten days; one-third in nine months from date of sale, and balance in eighteen months from date of sale; interest at the rate of six per cent. per annum from date of sale, to be also paid with instalments. Balance of price and interest to be reasonably secured on limits and products thereof.

These timber berths are held under license from the Province of Quebec, and will be sold subject to the provisions and conditions of said licenses and the laws and regulations of that province relating to such matters. For further particulars apply to—

**Dimension or The Burner.**

The present high price of hardwood stumpage has forcibly suggested to many manufacturers the desirability of working dimension stock. The subject has been discussed exhaustively and the experience of some "scientific" managers in the business has led

to a profit on the good side of the ledger through taking care of the waste from the log says the American Lumberman. But a sage in the business, who has probably manufactured a thousand million feet in the last 40 years and who, by the way, has a specialty factory and gives attention to quick delivery and uninterrupted contracts with his customers as a result of his ability to deliver the goods when they are wanted; recently had this to say: "I have investigated this dimension stock proposition all I want to. After long discussion and study of it from every viewpoint I ran up to Michigan and bought a couple of refuse burners, and I found they were a valuable asset. They kept me from experimenting with a lot of waste material that most persons think does not cost them anything because they get it from the waste part of the log but which in reality, where a man plans to sell a quantity of it, gets him into the same fix as the man who owned a swamp and figured that he had a million frogs in it, but, when he tried to deliver them to a hotel, found only one frog."

This does not mean that dimension stock can not be made by the hardwood sawmill, especially if it have mills at a central point; but when the manufacturer thinks that he can deliver this stuff at any buyer's price, or can figure on selling it for less than what should be an average selling price for the revolutionizing the sugar making industry and at the same time enhance the value of a product that has so far been practically a waste material at all sawmills and especially at those situated in interior sections.

Sacchulose is the name applied to the new product. The results obtained are what are termed "classed processes," in which sawdust is subjected in closed retorts to digestion with a weak sulphuric acid solution and under a pressure of about 100 pounds to the square inch, effective transmission takes place. Of the resulting product twenty-five per cent. is sugar. The constituent sugar so formed is dextro in part and fermentable to an extent of eighty per cent. The rest is not fermentable.

Large quantities of the product have been actually produced and it is said that arrangements have been made for the establishment of a large factory in England for the further exploitation of the product. According to these reports the manufacture of sugar from sawdust is to become an actual fact in that country and if successful plants will be established in the United States by those interested in the new process. A. Z. Zimmerman, an English scientist, has been making numerous experiments in the feeding of horses and it is announced that increases in weight have been noted ranging

from thirty-five to seventy pounds.

According to the same announcements the dust from practically all woods can be used in the manufacture of sugar by this process while that from yellow pine and the various oaks is superior to that from other woods. Further experiments to be made will be watched with much interest by the lumber interests of the United States. A factory capable of treating 200 tons of sawdust per week could turn out between 300,000 and 400,000 gallons of proof spirit per annum, besides other valuable by-products.

**Sugar From Wood.**

According to recent press dispatches from London, England, the production of sugar from wood is in a fair way of being established on a commercial basis. One of the telegrams on the subject discusses with considerable enthusiasm the new extracting process, after this manner:

British chemists are enthused over the fact that experiments have resulted in a discovery which it is said may revolutionize the sugar refining industry. By a new chemical process the manufacture of sugar from wood and sawdust has become an accomplished fact. Large quantities of the commodity actually has been produced and it is said that arrangements are in hand for the establishment of factories throughout England for the exploitation of the process.

"Sacchulose" is the term applied to the new product. The results obtained are what are called "classed process," in which sawdust is subjected in closed retorts to digestion with a weak sulphurous acid solution, and under the pressure of about 90 to 100 pounds to the square inch effective transmutation takes place. Of the resulting product 25 per cent. is sugar. The constituent sugar so formed is dextro in part and fermentable to an extent of 80 per cent. The rest is not fermentable.

Horses fed on quantities of the new sugar increased in weight 70, 30, 35 and 65 pounds, respectively.

**Vanderbilt's \$680,000 Profit on Timberland.**

George W. Vanderbilt invested \$136,000 twenty years ago when he bought for \$2 an acre 68,000 acres of mountain forest land, most of it along the Transylvania branch of the Southern Railway. This fall Mr. Vanderbilt sold the large timber from the tract for \$12 an acre, or \$816,000. He made a profit of \$680,000 on his investment, and he still has the land and all timber under 14 inches. This is an example of profits on a large scale from Southeastern timber lands.

The purchasers are given twenty years to remove the 25,000,000 feet of lumber estimated to be on the tract. It is agreed that the timber shall be cut with a view to the proper conservation of the forest.

The lumber will be manufactured at Pisgah Forest station on the Transylvania branch of the Southern Railway, where the purchasers of the big timber tract will erect a mill. Wood waste has been purchased by the Brevard Tanning Company.

**Purchase of Poles for 1911.**

Preliminary report for 1911 issued by the census bureau shows that the number of poles purchased by telegraph and telephone companies, steam and electric power companies in the United States was less than for 1910 and 1909 by 452,674 and 320,720 respectively but exceeded the total for 1908 and 1907 by 168,866 and 134,752 respectively. The total reported purchase in 1911 aggregated 3,418,020, of which 70.3 per cent. were made by telephone and telegraph companies, 23 per cent. by electric railroad, light and power companies, and 6.7 per cent. by the steam railroads, says the Hardwood Record.

The decrease in the 1911 totals as compared with that for the preceding year was confined entirely to a falling off in purchase by the telephone and telegraph companies and steam railroads. On the other hand, a substantial increase was shown in purchases by electric railroads and electric light and power companies. The decreases in 1911 in purchases as reported by the telegraph and telephone companies was not general, being confined in the main to states in which there was no more than usual activity in the construction of telephone lines during 1910.

During the period of five years covered by the report, the total pole purchase was 17,559,876, of which white cedar contributed 64.2 per cent.; chestnut, 17.8 per cent.; oak, 5.3 per cent.; pine, 4.5 per cent.; cypress, 2.4 per cent. These five woods furnished 94.3 per cent. of the total, but the tendency has continued to substitute less expensive woods for these five. Other woods used are redwood, osage orange, and locust.

# Review of Current Trade Conditions

## Ontario

The snow and cold weather which have obtained during the past few weeks have proved a boon to many lumbermen, but considerable anxiety is still felt as to how long this state of affairs will last. As it is, in many places in the bush the ground is still comparatively soft and the snow is not packed hard enough to make a firm road. However, should the frost continue for another five or six weeks, lumbermen will be in a better position, so far as output is concerned, than seemed possible a few weeks ago.

Although the demand for all kinds of lumber is rather above the average at present, not much business is being done except for immediate requirements. The shortage of labor has been for some time past a serious problem for the lumberman, and it is particularly so at the moment, when a day's work lost might not be regained this season. This fact makes the laborer very imperious in his demands and lumbermen are compelled to pay highly for his services. Taking this fact into consideration and also the uncertainty as to his output, dealers are content at present, as a rule, to sell lumber as their customers require it, and are not seeking contracts. On the other hand, the consumer is forced to pay high prices for his requirements, and, hoping that the high water mark has been reached, is waiting the turn of events before binding himself to a contract for any considerable amount.

Even if the favorable weather for hauling operations continues, there does not seem to be any reasonable likelihood of a drop in prices, as lumbermen consider that they have to reimburse themselves for an unprofitable season.

Reports from Ottawa show that an exceptionally busy year is expected by the local trade. The government will be spending some \$3,000,000 on public buildings in Ottawa and its neighborhood during the year and private individuals and companies are doing more building than ever before. Orders for stock are pouring in already and the outlook is splendid. The cold weather has relieved the anxiety which formerly prevailed as to the outcome of the woods operations.

## Eastern Canada

The lumber trade at Montreal is enjoying a very satisfactory volume of business for this time of year and wholesalers report that market conditions could not be better than they are at present. The building permits for January show an increase in value of \$186,110 as compared with the corresponding period of 1911. A general opinion prevails that prices during the present year will advance. Manufacturers are already asking higher figures and some wholesalers report that prices are from two to four dollars higher than a year ago. Present indications are that there will be a scarcity of spruce. The demand for chemical pulp continues strong with a good outlook for trade during the year. Ground wood is quiet on account of the large supply in the United States.

The lumber situation in New Brunswick shows no important change during the past fortnight. Sales for future delivery are not taking place as yet, manufacturers feeling that it will be to their benefit to await better prices. There has not been enough snow in New Brunswick, with the exception of the northern part of the Province, for getting out logs. In northern New Brunswick and northern Maine, conditions have been better and lumbermen report that they will get their cuts out at the usual time. Recent reports are to the effect that some manufacturers have sold their cuts of deals, 50 per cent. 7-inch and 8-inch by 3-inch, balance 9 inch and up at \$17.50 at the mill. Other reports are to the effect that some St. John manufacturers have sold their English deals in St. John for the future season's cut at \$16 or better. The latter report, however, is not confirmed. Spruce boards are scarce and selling at high prices. Laths for spot delivery are selling at \$3 on the wharf at St. John and contracts are being made for mill cuts at about \$2.70 for delivery during 1913. Very few manufacturers, however, have accepted these prices. Shingles are scarce and strong.

Manufacturing conditions in connection with eastern spruce are reported to be rather unfavorable and it is expected that the spring market at New York will be strong. The market for hemlock at New York is firm on a basis of \$23.50. Stocks at the mills are light and an active spring trade is expected. Hardwoods are selling well at New York, both in good lumber and lower grades. Advanced prices for ash, maple and oak are firmly held.

At Boston, offerings of eastern spruce are a little more plentiful than they were a fortnight ago, as the result of small mills trying to get in with their stocks while the price is high. Indications are that frames may advance to \$30 by spring. There is a good demand

for boards and stocks are light with prices firm. Spruce lath are unchanged. The hardwood trade at Boston is active. Plain oak is firm at high prices. Ash, elm, birch and maple are not very plentiful and prices are firm.

## Great Britain

A moderate improvement is reported in the timber trade at Liverpool and Manchester and greater improvement is looked for in the very near future. Timber values in general remain at a firm level with the possible exception of sawn pitch pine. Firm prices are likely to continue because shippers from all sources are offering in small quantities only and because freight rates in general are firm and in some cases advancing. Spruce is firm and seems likely to continue in this condition. Alterations taking place will probably be in the direction of advanced prices. The demand for spruce in Great Britain and in Canada is very large and will increase. The quantity reaching the English market will in future, therefore, probably diminish, even at the present high prices, viz., £10 5s c.i.f. It is expected that supplies will not be obtained in really useful quantities. At the latest advices, however, the arrival of several parcels of spruce and a full cargo at Manchester had relieved the situation.

Quebec pine deals are now considered by the trade as a great luxury and the demand is turning rather markedly towards Siberian pine, which is establishing itself slowly but surely, as the best substitute for Canadian pine.

Hardwoods at Liverpool and Manchester, are in good demand, and shippers' prices are frequently paid without hesitation. Oak, ash and hickory logs are coming to hand plentifully and are in good demand.

The London spot market is in quite a hopeful condition. Values in general are steady and everywhere sales have been numerous so that agents are not anxious to dispose of the balances which they have on hand.

## United States

Nothing that has occurred during the past fortnight would indicate any alteration in the excellent outlook for a good season's trade during the coming spring and summer. It may now be practically taken as a fact that the present winter will be concluded without any real season of winter dullness. There has been steady demands for stocks of building woods, so that in the majority of cases manufacturers are behind with their shipments. The logging situation in the Northern States has been unfavorable. Up to the end of January there had been insufficient snow and frost for hauling. This condition applied generally to the territory from Maine to the head of the Great Lakes and extending down into western Pennsylvania. In many parts of the south, rains have interfered with logging. On the west coast severe weather with heavy snow falls and rain have been the cause of trouble, so that, taking things generally, there seems to have been an exceptional state of affairs in logging operations throughout the greater part of the country. The most important problem apparently, will be to secure stocks during the coming year, and, in the face of this, it is generally expected that, taking everything into consideration, there will be a record breaking demand for lumber. Those who are contented to sit down and wait rather than prophesying results are looking forward to a year of most interesting developments.

In the northern pine market everyone is looking for a banner year. The quantity of business transacted during the month of January and the volume of enquiries received indicate that this view of the situation is probably correct. There is a scarcity of low grades and owners are holding them firmly. Box lumber is very strong and manufacturers are doing a lively business. In the hemlock trade, everyone agrees that business is better than it has been for many years. Wherever hemlock is used the demand is heavy, so that supplies are disappearing as fast as they turn up. Prices are firm. It is interesting to note in this connection that yellow pine manufacturers and wholesalers, who have studied the statistics of production, claim that the crest of yellow pine production has nearly been reached. Holding this view they expect that hemlock will be able to maintain its trade in its natural territories.

The hardwood trade continues in excellent condition, so far as the demand is concerned. Stocks are badly broken and the wholesalers are finding difficulty in buying the variety they require. Among the northern hardwoods it is reported that the prices for 1-in. birch firsts and seconds are now higher than they have ever been before. Common birch is not so popular as the uppers, but its price is pretty satisfactory. Stocks of hard maple are scarce, with prices quite \$2 higher than they were a year ago.

A Winter Scene at our Mills in Sarnia.

# We Saw all Winter

¶ You can always be sure of getting what you want from us because we saw all Winter and all stocks are always "piled high."

¶ Norway and White Pine a specialty. We are able to make large or small shipments on very short notice.

¶ Are you in the market for heavy timbers? We cut them any length required up to 60 feet from Pine and B. C. Fir.

What Manufacturers of Logging, Sawmill and Woodworking Appliances are Doing

## American No. 34 Inside Moulder

Is the title of a very attractive booklet just issued by the American Wood Working Machinery Company, of Rochester, N.Y., which illustrates and describes very profusely their latest production in the way of an inside molder. The American No. 34 Inside Moulder is a new machine built along the well-known lines of the manufacturers' No. 77 Fast Feed Planer.

The illustration herewith will give the reader a good idea of the general design and form of construction of the frame, which is unusually heavy in all its members, and the metal of which is evenly distributed to give strength to the working parts—where most needed. Special attention has been given to the feed, consisting of four rolls driven by powerful gears. The top rolls lift together by aid of a single hand wheel shown in the illustration. Pressure is given by coil springs with adjustment for light or heavy work. The machine is built in two sizes to work material 12 in. and 15 in. wide by 6 in. thick.

The booklet mentioned above calls attention to the direct and simple system of gearing; the massive bed plate supporting the

the equipment being moved to the Glassport, Pa., plant of the American Axe & Tool Works. This equipment Mr. Mack will replace as speedily as possible. Mr. Mack's experience in manufacturing axes dates back to 1880, when he first learned the trade at the plant of the Jamestown Axe & Tool Company, Jamestown, N.Y. When the American Axe & Tool Works was organized in 1890 Mr. Mack was made manager of the plant at Jamestown, where he remained until 1899, when he was appointed manager of the Beaver Falls plant. This position he still held when the plant was abandoned last July. Mr. Mack expects to produce from 90,000 to 100,000 dozen axes per year, also hatchets and kindred lines after he gets the plant in operation.

## A Useful Tractor for Lumbermen

Those who have had experience in hauling lumber know the troubles arising when an engine has become stalled owing to bad roads or to want of roads. Similar transportation difficulties presented themselves in a very marked manner during the South African war, and induced the British Government to offer a prize of \$5,000

American Woodworking Machinery Company's New No. 34 Inside Moulder

matcher legs; the side clamping boxes for both cutter head and side head journals; the accurately fitted and easy adjustments throughout, and many other splendid features peculiar to this new moulder alone. Every planing mill man who wishes to keep abreast of the rapid strides in the development of woodworking machinery should have this booklet. Upon receipt of request, the manufacturers will gladly send you a copy.

## Gutta Percha and Rubber, Limited

The Gutta Percha and Rubber Manufacturing Company, of Toronto, Limited, announce a re-organization of the company's business which took effect at the beginning of the present year. For many years the business has been carried on under the name of "The Gutta Percha and Rubber Manufacturing Company, of Toronto, Limited," and through its subsidiary companies:—The Winnipeg Rubber Company, Limited, Vancouver Rubber Company, Limited, and the Toronto Rubber Company, Limited. In future all the branches of the company will be operated under one name. A Dominion charter has been obtained under the name of "Gutta Percha and Rubber Limited," with an authorized capital of \$6,000,000. The company will be controlled by the same interests as before and will be under the same management.

## Axe Plant Sold

The axe plant at Beaver Falls, Pa., formerly operated by the American Axe & Tool Works, has been purchased by John Mack, who intends to begin manufacturing operations in the near future. This plant was shut down last July, a small portion of

for a steam tractor which would fulfil certain stringent conditions, the offer being open to the world. The trials resulted in the prize being awarded to Messrs. Richard Hornsby & Sons, Limited, Grantham, England, together with a bonus for exceeding the requirements. Messrs. Hornsby have, we learn, concluded negotiations with the Holt Manufacturing Company, with which is incorporated the Holt Caterpillar Company, of New York, for the sale outright of these tractors, known as caterpillar engines, for farm and other use throughout the Dominion of Canada. They will continue their Canadian branch, which has been opened at 212 McGill street, Montreal, for the sale of their other internal combustion engines.

## Protective Paint

The Joseph Dixon Crucible Company, of Jersey City, N.J., U.S.A., produce from their mines at Ticonderoga, N.Y., a peculiar form of silica and graphite, the use of which as a paint pigment has made Dixon's Silica-Graphite Paint famous the world over for the protection of iron and steel. The peculiarity lies in the fact that the particles of silica and graphite are largely attached, so that when made into a paint, there is no separation in settling as would be the case if finely pulverized silica were added to the graphite. This quality insures uniformity of mixture and evenness of application. A silica-graphite paint is ideal. It is very adherent, elastic and water repellent. For over fifty years it has been in the forefront of protective coatings. Dixon's Silica-Graphite Paint is used all over the world by leading lumber concerns for the preservation of iron construction, smokestacks, boiler fronts, etc. The representative of the Joseph Dixon Crucible Company, who handles this product in Northwest Canada, is Mr. H. E. Westervelt, 197 Furby street, Winnipeg.

## Horizontal Slab Resaw

¶ A Horizontal Slab Resaw will increase the capacity of a saw-mill from 15 to 25 M ft. at a less cost for equipment and a less cost for operation, than can be accomplished in any other way.

## Ontario

Oscar C. Teal is erecting a planing mill to cost \$8,000, at Bridgeburg, Ont., and also a planing mill to cost \$8,000 at Amigari, Ont.

The Crossing Lumber Company, Limited, Frank R. Patriarche, Kinaki, Ont., managing director, are contemplating the erection of a sawmill. Construction is expected to commence next fall.

The Westport Woodworking Company, Limited, has been incorporated with a capital of \$40,000, to manufacture and deal in timber, lumber, and all kinds of wood products, with head office at Westport, Ont.

The McLaren Lumber Company, Limited, have been granted a Dominion charter to carry on business as manufacturers of lumber, with head office at Toronto, and capital stock of \$1,250,000.

The planing mill which is being erected by Reitzel Bros., Foundry street, Waterloo, Ont., costing \$20,000, will be one storey high, 126 feet by 66 feet, with cement foundation, reinforced concrete construction and pine floors.

R. Truax & Son are having plans prepared for the erection of a one-storey sash and door factory, 150 feet by 90 feet, with cement foundations and white brick construction. They will be in the market for general machinery. The cost of the plant will be \$7,000.

The Evel Casket Company, Limited, has been incorporated with a capital of \$100,000, to acquire and develop timber limits, operate saw and planing mills, woodworking factories, etc., to manufacture and deal in caskets, coffins, undertakers' supplies, etc., with head office at Hamilton, Ont.

Wilbur Cochrane, Sudbury, Ont., has bought from Dwight J. Turner, Toronto, the larger part of the township of Trill, for \$100,000. The limit is estimated to contain 20,000,000 feet of virgin white pine. Mr. Cochrane is already operating in the township of Cascadden north of Trill and intends to operate in Trill also, taking the logs out to Little Current for sawing.

M. J. O'Brien, Cobalt, Ont., will have plans prepared for the erection of a pulp and paper mill at Haileybury, Ont. The plant will have cement foundation with reinforced construction. He will require equipment consisting of engines, belting, conveyors, transmission and hydraulic machinery, pulp crushers, wood grinders, presses and rolls, etc.

The plant of the Abitibi Pulp & Paper Company, Limited, which is to be erected at Iroquois Falls, will be of 21,500 h.p., and the machinery required at the commencement will include boilers, engines, transmission, belting, conveyors, turbine hydraulics, wood crushers, wood grinders, 18 tons each, pulp presses, wooden tanks, cement machinery, etc. A ground wood mill of 150 tons capacity will be put up and construction work will be commenced in the spring.

The H. E. Talbot Company, of Sault Ste. Marie, Ont., have been awarded the contract for the construction of the 1,500 foot dam and the installation of a complete hydro-electric system in Grand'Mere, Que. On its completion the power station will be one of the largest in America, developing 75,000 horse power. The contract involves an expenditure of over \$1,500,000. The interests financing the enterprise are closely allied with the Laurentide Paper Company, as the Laurentide Power Company is a subsidiary corporation. Power will be furnished to a number of industries in Grand'Mere and a number of plants in Montreal.

## Eastern Canada

R. Emard, Montreal, Que., has secured registration to carry on a lumber business.

D. Thibault and Company, Hereford, Que., have been registered as lumber dealers.

B. A. Scott, Roberval, Que., is contemplating the erection of a paper mill at Grand Discharge, Que. He will be in the market for general machinery.

The Brompton Pulp & Paper Company have purchased the timber limits of J. E. Laberge near Lambton, Que. The 5,000 acres cost in the vicinity of \$35,000.

It is reported from Quebec that the Wayagamack Pulp and Paper Company has sold its timber cut for the present season at a price which will net over \$90,000.

W. S. Tomkins, Meductic, N.B., has purchased a tract of timber lands in the parish of Southampton and Queensbury, N.B. The property amounts to about 2,300 acres and is estimated to contain about 5,000,000 feet of timber. The price was in the neighborhood of \$30,000.

According to a Quebec despatch, the Belgo-Canadian Pulp & Paper Company, of Shawinigan Falls, have purchased from the Hon. J. S. Sharples and Messrs. Wm. Power & Calvin, of Garden Island, Ont., over 500 miles of timber limits, known as the Metabetchouan limits. The price paid for these limits is stated to be over \$500,000.

The recent election of Philip T. Dodge as president of the International Paper Company is expected to inaugurate a new regime in the affairs of that corporation. At present eighty per cent. of the products of the International Paper Company is news-print. With increasing imports from Canada and other foreign countries, some directors are of the opinion that the situation may arise when it will be difficult to dispose of the primary product at satisfactory prices. To eliminate this difficulty, it is planned to build new plants in Canada. The company has already selected two sites in Canada, where it will probably erect mills within the next twelve months.

## Western Canada

Schindler Bros., Watson, Sask., recently suffered loss by fire at their lumber yards.

The Victoria Lumber & Manufacturing Company, of Chemainus, is making improvements with a view to increasing the output. When the new mill

on Cowichan Lake is completed, the Chemainus company will rebuild its plant and bring it up to 250,000 feet daily capacity.

Christie & Company, Vancouver, have secured control of the shingle mill at Nanoose Bay, Vancouver Island.

The new mill of the E. H. Heaps Lumber Company, at Ruskin, B.C., is ready to cut. It will be operated by means of electricity.

The new mill of the United Lumber Company at Nanoose Bay, Vancouver Island, started cutting recently and can turn out 100,000 feet per day.

The Redwing Lumber & Supply Company, Limited, 850 View street, Victoria, B.C., have awarded to G. E. Hutchinson the contract for the erection of a mill to cost \$7,000.

A hospital at Big River, Alta., belonging to Mackenzie-Mann lumbering interests, was recently destroyed by fire. The patients were removed without accident to nearby homes.

The mill of the Monarch Lumber Company at Savona, B.C., which was burned some time ago, has been replaced. The capacity is now 60,000 feet per day. The executive of this company is J. C. Shields, president; L. W. Cameron, general manager and sales manager; C. R. Riddell, office manager; T. Crawford, mill superintendent.

J. Moore and C. W. Barker, of the Canadian Puget Sound Lumber Company, Limited, have purchased extensive limits at Sooke, Vancouver Island, from Cook & Hunter, and are building a couple of miles of standard gauge logging railway to facilitate getting out the timber. One hundred men will be employed.

Delbert Hankin, formerly general manager of the Canadian Puget Sound Lumber Company, has acquired a half interest in the New Ladysmith Lumber Company, and will be associated with the president, J. W. Cockburn, in the management. Extensive improvements are contemplated to the Nanaimo mill of the company.

The British America Mills & Timber Company has moved its head office from Winnipeg to Vancouver, J. E. Dougherty is the general manager, and J. D. Robinson, his assistant. R. J. Crawford, who has been in charge for several years at Vancouver, will continue with the company as purchasing agent. The object of the move is to get closer to the source of supply of lumber.

Good progress is being made at the Powell River Pulp & Paper Company's plant at Powell River, B.C. Their first mill is now turning out one hundred tons of news print per day and their second mill, which will have a capacity of one hundred and fifty tons, will be finished at an early date. They are carefully conserving their timber and may be said to have a perpetual supply.

The Small-Bucklin Lumber Company, of New Westminster, has dismissed ninety Hindus and will replace them with white labor. Recently at New Westminster there were trials of perjury against the Hindus and in the course of the evidence it was alleged that to retain their jobs the Hindus had been giving bribes to certain officials. The management was influenced in the step they have taken by this fact.

The financial firm Alvo von Alvensleben will be reorganized into a large trust company, which will be backed by one of the largest banking houses of Germany. This firm controls the Vancouver Timber & Trading Company, the interests of which were taken over during the last year. Arrangements have been completed for capital with which to build a sawmill at Port Moody on Burrard Inlet, where the firm owns 30 acres of land and a thousand feet of water front. The site was cleared last summer.

Cliff Bros., New Westminster, B.C., have purchased the British Columbia Box Factory at the eastern point of Lulu Island. M. J. McDonald, former manager of the British Columbia Lumber Company's mill on Lulu Island, is associated with the Cliff Bros. in the transaction. The company contemplates the erection of a complete plant, including a sawmill, box factory and shingle mill in or near New Westminster, at a cost of \$75,000. In the meanwhile they will continue to operate the old plant on Lulu Island.

The receivers and managers and liquidator of the Dominion Saw Mills & Lumber Company, Limited (in liquidation), announce that the following have been appointed as the board of Forest Mills of British Columbia, Limited, successors to the business heretofore carried on by the former corporation: J. M. Savage, Victoria, chairman; R. S. Lennie, barrister; W. J. Blake Wilson, T. Frank Paterson, all of Vancouver, and W. A. Anstie of Calgary. Mr. Anstie will occupy the position of executive agent of the board, with headquarters in Vancouver.

One of the new concerns in British Columbia is the United States Pacific Lumber & Logging Company, which has officers as follows: President, John M. Thompson, Menominee, Mich.; vice-president, D. J. O'Brien, logging operator, Vancouver, B.C.; secretary and treasurer, John W. Welsh, Vancouver. This company has about 100,000,000 feet of fir and cedar and is negotiating for more. Mr. Thompson, the president, for years operated extensively in Northern Ontario, selling out in 1907. At present he is president of the Spies-Thompson Lumber Company, of Menominee, and vice-president of the Hoyt Lumber Company, of Detroit.

A New Westminster, B.C., despatch says that Capt. C. H. DeBeck, former president of the Fernridge Lumber Company, has purchased the Royal City Mills plant from the B. C. Timber & Trading Company, and will operate there a shingle and cedar sawmill plant, leasing the site from the Canadian Northern Railway Company. The new company will be known as the Royal City Shingle & Lumber Company, Limited. Its capacity will be 150,000 shingles and about 15,000 feet of clear cedar each day. If the business warrants, the company will put in a night shift and the number of men employed and the capacity of the mill will be greatly increased.

The sawmill at Lethbridge, Alta., which was recently constructed to convert old C. P. R. bridge timber into lumber, has commenced operations. A large amount of timber was floated down the river last summer and there are now 2,000,000 feet on the ground. This will probably keep the mill in operation until the remainder can be brought down during the spring and early summer. There are 4,000,000 feet still to be brought down the river. A large portion of the timber is excellent British Columbia pine, cedar and fir, which, having been well seasoned in use, ought to make a very desirable class of lumber, etc. The pine and cedar will be manufactured into shingles, a shingle mill having been installed in connection with the plant, which also includes machinery for dressing, edging and moulding.

☛ To insure satisfaction--state where belt is to run ☛

## Don't Tie the Dead Weight of a Cheap Belt to Your Plant

When you install a cheap belt in your plant you are led to expect it to last as long as a good belt—if you thought it would not, you would obviously have installed a good belt in the first place.

You know the advantage of reliable and efficient power transmission in your plant—do not hope to effect this by poor equipment—cheap belts will stretch and slip and cause a shut-down, with its consequent loss of time and money, for shortening and repairs. The good belt saves its slightly additional cost in its reliability and long life.

Every Brand of **BEARDMORE BELTING** receives the same care and attention and goes through the same process; and all brands are uniform in the possession of the highest quality possible in leather belting.

You are in the market for leather belting—let us demonstrate the advantage of buying the best on the market.

## SELECTION OF LOCOMOTIVES

WHAT SHOULD BE KNOWN BEFORE YOU PURCHASE LOCOMOTIVES:—

Nature of the service.

Capacity of the cars and weight of train.

Character of track—is it new or old.

Length of haul.

Is time an important factor.

Do you want a quick locomotive or a big puller.

Distance from base of supplies and quarters for the men.

Water and coal carrying capacity.

All these items and more should be considered.

A careful study of conditions may mean larger profits.

Our experience may be valuable in considering them.

A dollar saved is more than a dollar earned.

Write or wire us, or better still, come to see us.

# SMITH CIRCULAR SAWS

*Solid and Inserted Tooth*

Smith's  
Perfect  
Temper  
Chisel  
Tooth  
Saws

Used  
in  
Canada's  
Largest  
Saw  
Mills

Variously designed  
teeth to meet every  
condition. Made  
in several sizes.

By a special patent tempering process we are able to produce a saw that will stand up to its work and retain its edge longer than any other saw: old style solid tooth saws can be converted into new inserted tooth saws at small cost—write us.

## Tools You Can Rely Upon

### Cutter Heads for Jointing

For jointing the edge of a board or plank the Shimer Jointer Heads will be found to be superior tools. The Bits begin cutting at the top and shear downward, leaving the corner of the plank or board full, with a clean cut finish across the edge. They will be found very complete tools for the purpose and are shipped out under our guarantee to give satisfaction.

Price, complete to joint 15-16 to 1½ in. lumber \$31.20. Extra Bits to joint 1½ to 2 in. lumber \$1.56 each.

### Heads for making Ship Lap

The Shimer Cutter Heads for Ship Lap are so proportioned in the Bits and their seats that a perfect draw cut is made. They work interchangeably with our Matcher Heads and always produce good work.

Price, per set, complete \$33.64 to \$38.48 according to thickness of cut. Extra Bits for making Wainscoting on these Heads, \$1.95 each.

These tools will keep your work up to standard and save you all the fitting and trying. For particulars address

**DISSTON**  
*Quality  
Tells*

## The Highest Point of Efficiency

cannot be attained in any branch of work unless high quality tools are employed. This applies with exceptional force to files.

## DISSTON FILES

comprise the finest and greatest variety made by any single manufacturer today. The ever-increasing, and ever-widening demand for them demonstrates more strongly than mere words how thoroughly their efficiency and durability are appreciated.

# "JOHN BULL"

## Larrigans

Next time you need larrigans ask for "John Bull" brand. They are strongly made, absolutely waterproof and wear like iron when soled and heeled. A counter stiffener is sewn in the leg of "John Bull" larrigans which helps them to keep their shape.

Every pair is stamped with our trade mark "John Bull". Always find the trade mark and you will always get the best.

### "Dolphin"

is the belting to use in wet places. It is impervious to moisture and gives entire satisfaction. You can run it in water and the cement will hold fast. No rivets or sewing necessary. A water-proof belt in the full sense of the word. The cement is one of the most adhesive water-proof known.

ARE YOU HAVING  
BELTING TROUBLES  
?

**Providence Belting Co.**

Providence, R. I., U. S. A.

Office and Factory: 25-39 Charles St.

We Solicit a Trial  
Order

### "Black Diamond"

will do more work and easier than any other belt made. Give it a trial. Unequalled for Dynamos, Fans or any high speed machinery with small Pulleys. Does not require to be kept as tight as the regular Oak Belt.

## Why pay *four men* to produce bevel siding, ship-lap, flooring, ceiling and shooks at 75 ft. per min. when *two* men can produce a *higher grade* of the same stuff at 200 ft. per min.?

—It's certainly not good business policy to pay twice as much to manufacture 75 ft. of lumber when you can get 200 ft. and even more per minute for one-half the labor cost by using a **FAY-EGAN "Lightning"** No. 333-335 Matcher - Resaw, **with the Resaw below the Bedline of the Matcher.**

—Instead of surfacing double thick at 75 ft. per min. using two men on the surfacer, then trucking or handling to the Resaw and again using two men, a feeder and off-bearer; why not combine both operations on the 333 - 335 Matcher-Resaw, using only one feeder and one off-bearer, eliminating extra handling and trucking entirely and running 200 ft. and

End view (guards removed) showing Resaw set for Bevel Siding, showing also easy accessibility to all parts.

upwards per minute through the combination machine—a total product in lineal feet of stock just double this last figure.

—Here is another point that must not be

overlooked—by your present method 10 to 30% of your stock is degraded because of mismanufacturing and tearing out on knotty and cross-grained stuff. The 333-335 positively will not do this and every piece of lumber put through it will be surfaced, matched and resawed perfectly, raising the grade 10 to 30% as compared to your present method.

—Do you know of any easier way to make money in a planing mill? You can easily figure it out for yourself just what the saving amounts to in actual dollars and cents, or give us some data on your present output and labour costs and we'll figure it out for you.

Send today for our new book on Fast Feed Matchers and Surfacers which fully illustrates and describes the No. 333-335 Matcher Resaw—with the Resaw below the Bed-line.

## TIMBER TALKS

### Looking Backward, 1918

I could have bought that tract of timber in 1913. It was offered at a low price on an estimate showing the quantity of lumber it would have produced had it been cut at that time. It is worth double that price or more today and through closer utilization it will produce one third more in values than it would have under methods then in vogue. That would have been at least

### 166 per cent in five years

Five years from now what will your conclusion be?

"I am glad I bought it,"

Or

"I wish I had bought it?"

If you live in the present, if you are interested in present opportunities rather than reviewing those of the last decade, your conclusion will be "I am glad I bought it."

If you are a member of the Ancient and Slothful Order of Hindsighters you will tell future generations what might have happened, if—

## MOWRY & SONS, Gravenhurst, Ontario

The  
Markof  
Quality

One of the Many Unsolicited Statements of Users of Our Feeds:

Burt's Corners, N. B.,  
Jan. 14th, 1913.

The E. Long Mfg. Co.,  
Orillia, Ontario.

"I want to say your steam feed is an "Ideal". Some Millwrights told me I would need another boiler and it rather frightened me, but as for steam, I never knew the difference in it. It is just splendid. Have used it ever since it was put in and have not had a bit of trouble."

Yours truly,  
(Sgd.) Elwood Burt

### Direct Acting "Shot Gun" Feed, Fitted with Double Model "D" Valve

Built in sections to make up any required length, 8 in., 10 in., 11 in., 12 in., and 14 in. bore. We positively guarantee that our valves will not stick or kick. They are perfectly steam tight, and are without exception the most economical valves manufactured.

Mill Plans,  
Specifications  
and Estimates  
of Complete  
Mills Furnished

Our New Carriage Bulletin No. 100 gladly sent on request.

### One of Long's "Quality" Steel Carriages

A Carriage to be up-to-date, must necessarily have up-to-date equipment throughout. Notice our new shock absorbing quadrant on back of knees for taking shock of Nigger. No carriage up-to-date without it. This style built with 36 in., 40 in., 44 in., 48 in., 54 in., 60 in., and 72 in. opening from saw line.

# What Do You Call A Good Medium Edger?

*The best Edger for medium capacity Mills is one that will handle all medium sized cants that come through, that will operate with little power, that will take up a minimum of floor space and that is built strong enough to handle the work fast and continuously. At the same time the Edger should be safe and easy to operate, simple to adjust and convenient for overhauling.*

You will agree with this definition

## The Waterous New Champion Edger Combines All These Features

It is built with 40", 48" and 56" working opening, to carry as many as four movable and two stationary saws, and will take all sized cants up to 6 inches. The saw mandrel is  $3\frac{7}{8}$ " diameter, saw collars 6", and saws 22" in diameter. This leaves 8" of saw above the collar—plenty of margin to allow saw to clear itself in a 6" cant.

Saws are shifted by straight line levers; they can be approached within  $2\frac{7}{8}$ " of the stationary saws, and will approach each other within the same distance. To space them absolutely accurately, a steel setting gauge operated by foot tread from the front of the machine, drops over the guides and automatically crowds them into correct position and holds them there without shift. This is a Waterous feature.

Four chain-driven feed rolls and four heavy press rolls handle the stock safely and easily. All boxes are fitted to require little attention. The feed rolls and mandrel drive is simple and positive and requires little power. The edger is built compact and strong of selected materials, and tested before leaving the shop. We stand behind every machine we turn out.

A dozen other points which make the New Champion Edger, different and better are well illustrated and described in the new bulletin No. 113 which has just come in from the printer's. Let us send it to you

We build up-to-date  
Saw Mill Machinery  
for Mills of every  
capacity—Circular or  
Band.

### Time is Money

The rapid cutting File is the economical File

Files Branded

American - Arcade - Eagle - Great Western  
Globe - Kearney & Foot - McClellan - J. B. Smith

are rapid cutters made by

**NICHOLSON FILE COMPANY**  
Port Hope, Ont.

A Test Like  
THIS

1 1/2" chain broken at 11,770 lbs. Tested  
at McGill University in 1909

25% More Weld = 25% More Strength - 25% More Wear

Tested Steel Chain  
made at  
St. Catharines, Ont.

Secured only with  
welds like THIS

Sold by  
**McKinnon Chain Co.**  
BUFFALO, N.Y.

### NO FRAYING AT THE EDGES

Dick's Balata Belting possesses perfect uniformity throughout, whereby true and steady running is ensured, fraying at the edges rendered impossible, and perfect success in fork driving guaranteed. The combination of strength and uniformity in Dick's Belts is due to the process of solutionizing to which the textile portion of the Belting is subjected, and which thoroughly solidifies and unites the whole material.

You can get all the facts in our Catalog No. 17.

**DICK'S** Balata Belting Leather Belting Wood Split Pulleys Shafting Hangers Iron Pulleys

THE BELT YOU WILL EVENTUALLY USE

BECAUSE—It withstands heat, cold, damp, wet and chemical fumes.  
BECAUSE—It is uniform in thickness and runs true.  
BECAUSE—of its great strength, almost twice that of oak-tanned double leather.  
BECAUSE—It costs no more, all things considered

# Fully Guaranteed Sawmill Machinery

This is the only kind for you to buy to ensure satisfactory and continuous operation throughout the entire sawing season.

All our sawmill machinery is sold on an absolute guarantee of proper operation and perfect construction.

Naturally, therefore, we buy only the highest grade materials and use only skilled workmen, and everything is built under the most careful supervision.

These things are necessary to produce well built machinery, but they would be useless without proper design—and the “know how” of designing sawmill machinery can only come after long experience.

We have such complete confidence that our machinery is correctly designed that our guarantee is:

**“These machines are guaranteed against defective materials and workmanship for the period of one year, and their proper and successful operation is also absolutely guaranteed. Should any parts fail through defects, we will replace them free of charge, or should any machine not work properly, we will remove it at our expense and refund any part of the purchase money which may have been paid to us.”**

This guarantee goes with all our machines and we have never had to take back a standard machine yet.

And back of this guarantee is our fifty years' experience building sawmill machinery for stationary mills only.

It will pay you to buy your machinery from us this winter.

**William Hamilton Co., Limited**  
Peterborough, Ontario

# We are Going to Move this Lumber

Either to our customers or to our Buffalo Yard. It is now piled at our North Tonawanda Yard. We do not want to go to the expense of moving it to Buffalo, and are, therefore, giving you the advantage in price. It is all bone dry, band sawn, and exceptionally "creamy" stock.

## Don't Hesitate

You know the old proverb "He who hesitates is lost"—Well, of course, we know that that is contradicted by the just as old proverb "Look before you leap"—The logical conclusion therefore is—"you can't do both." But that is just the trouble with many business men. They take a good look and then they hesitate. There is no need to hesitate in deciding where to purchase

## Hemlock, Pine and Hardwood

You are quite safe in coming to us—we will give you the best on the market at the right price.

Write us for quotations—take a good look at our proposition then send us your order at once. Don't Hesitate.

# First Class Opportunity to Buy Standing Timber and Mill Machinery CHEAP

The undersigned offer for sale in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; Tug Scow and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

Tenders will be received up to March 15th for the purchase of the following Sawmill Machinery:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.  
1 3-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 16-ft. Slash table.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

## FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Automatic Machine for circular saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

## POWER PLANT

1 24 x 36 Slide Valve Engine with 40-in. x 12-ft. extra heavy double arm split fly wheel.

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Wood Machine for 16-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30-light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and rails and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

The lowest or any tender not necessarily accepted.

All of the above open for inspection at Parry Sound.

# Don't Read This Unless You Are Looking For **The Best Axes Made**

For instance, such as the **FELLER, MAXAX CHIPPER, BEAVER, OTTOWA CHIEF**, and "66" which are guaranteed to be made with Crucible Steel Bit. These are the celebrated brands that are being made in the plant that was formerly the No. 1 Plant of the American Axe and Tool Company, at Beaver Falls, Pa., U. S. A.

This Plant is now "Independent" and is not affiliated with any Axe Trust whatever

This Plant is known as **THE MACK AXE WORKS**, Beaver Falls, Pa., U. S. A.

The former and world wide reputation of this Plant for quality and workmanship shall be maintained throughout the future as the supervision of this Plant is under Mr. J. Mack, who formerly conducted said Plant for the past fifteen years previous to his purchasing same.

Our motto "**QUALITY and WORKMANSHIP**" is the supposed foundation of any business, but **IT IS THE FOUNDATION OF THIS PLANT** therefore if you are in the market for **AXES** that you can depend upon and have a reputation behind them that is known the world over, why not get in touch with the best.

**The Mack Axe Works**  
BEAVER FALLS, PA., U. S. A.

Our Inserted Saws are Fitted with our Patent I.X.L. Bits and Shanks, warranted not to slip sideways, and to cut free and easy, and have no equal in hardwood or any other timber.

# "Ajax" Loading Chain

## Greatest Strength in the Smallest Chain

Above Cut shows a piece of 9-32 inch Chain proof tested to 3,000 lbs.

Showing the same pulled to destruction, breaking at 7,800 lbs.  
(See how this Chain stretched before breaking.)

### WELD:

Sectional view showing comparative size of weld and chain.

The stock is overlapped on itself, carrying the lap around over half the length of the link and worked down under the hammer in such a way as to allow a swell in the weld end when finished, and giving a factor of safety not used in ordinary practice. This method of forming the link and building the weld makes the weld the strongest part of the link, as shown in above link which broke at the end opposite the weld end. In ordinary practice Chain invariably breaks in the weld, the lap not extending far enough around and not having sufficient work on the weld to insure equal strength of the material itself.

### STOCK:

Our long experience in the manufacture of Chain has taught us that a high grade Chain cannot be made of poor or cheap material, and we are using the best steel obtainable for this Chain, far superior to the Norway iron formerly used for making this grade of Chain, being higher in tensile, tougher and withstanding greater wear.

**INSPECTION:** We keep inspectors constantly inspecting the manufacture of the Chain at the fires, also prior to and after proof testing, to prevent any Chain leaving the factory which will not come up to our guarantee.

### TEST CERTIFICATE:

Every pound of this Chain is proof tested to strains shown in our catalogue and test certificate furnished. Breaks are made often enough to insure quality being maintained.

**GUARANTEE:** This chain we will guarantee to pull stiff before breaking and every pound will be replaced which does not meet this guarantee. In other words, this is a guarantee that every weld is perfect and that the stock itself is uniform.

Users of "Ajax" Chain are always satisfied customers and our friends: and, like all others we desire to increase our friends. Allow us to do so by shipping you "Ajax" Chain.

# MAPLE LEAF SAWS

The Improved Racer Cross Cut Saw, by Actual Test, is the Fastest and Easiest Cutting Saw Made

The Maple Leaf saw is higher priced than the ordinary saw because it costs more to make it. It is made of the very highest quality of steel and tempered by a secret process which toughens and refines the steel. The Maple Leaf trade mark on the saw means that it is the equal, if not superior to any saw made. It also means that you are privileged to test it against any other make and if not found equal or superior in quality you can return it and have your money refunded.

The ambition of the manufacturers of the Maple Leaf Saws has always been to produce the best tempered saw in the world and they are constantly investigating and experimenting with this end in view. They have recently made some valuable discoveries in evenness of temper. It has always been difficult to get a perfectly even temper on long and thin sheets of steel, such as saws are made of. Our recent discoveries make this an absolute certainty. Every user of saws should bear in mind that the temper of the saw is its most valuable quality. High finish and attractive appearance amount to nothing if the temper is not right.

All Maple Leaf Saws are Guaranteed to be Perfect in Temper

## Are your horses of use to you?

This seems an absurd question—and the answer is always  
**"Of course they are"**—In which case provide your stables with:

### Johnson's Reliable Veterinary Remedies

#### Johnson's Horse Liniment, No. 1 (Alcoholic)

|                        |             |
|------------------------|-------------|
| 1 gal. jugs (Imperial) | \$4.50 gal. |
| 1 lb. bottles          | 8.00 doz.   |
| 2 lb. bottles          | 15.00 doz.  |

#### Johnson's Horse Liniment, No. 2 (an oil liniment)

|                        |            |
|------------------------|------------|
| 1 gal. jugs (Imperial) | 3.00 gal.  |
| 1 lb. bottles          | 6.00 doz.  |
| 2 lb. bottles          | 11.00 doz. |

#### Johnson's Horse Colic Remedy

|                                               |            |
|-----------------------------------------------|------------|
| A sure and speedy cure for all kinds of Colic |            |
| 1 gal. jugs (Imperial) 40 doses               | 5.00 gal.  |
| 1 lb. bottles 4 doses                         | 8.00 doz.  |
| 2 lb. bottles 8 doses                         | 15.00 doz. |

#### Johnson's Veterinary Healing Ointment (Gall Cure)

|            |              |
|------------|--------------|
| 2 lb. tins | 2.25 per tin |
| 4 oz. tins | 3.50 doz.    |

#### Johnson's Condition Powders (Concentrated)

|                |           |
|----------------|-----------|
| 1 lb. Packages | 3.60 doz. |
|----------------|-----------|

#### Johnson's Camp and Household Remedies, such

as Cough Syrup, Healing Ointment, Headache Powders, Big 4 Liniment, Stomach Bitters, Cathartic Pills, etc., etc., have stood the test of twenty-five years and are in use all over Canada, from the Atlantic to the Pacific. Prices are lower than those of all other manufacturers. Letter orders receive prompt attention.

 all kinds.

ANTISEPTIC

You cannot get good work out of your lumber horses if they are lame, blemished, sore, sick or similarly unfit. The animal with Swellings, Soft Bunches, Bog Spavins or any such blemish, whether lame or not, needs your attention.

#### ABSORBINE

is your own and your horse's best friend—it relieves the horse of all pain, soreness and troublesome blemish. It makes the horse better looking, better working, more fit and of greater value to you.

You can work your horse at the same time. This is no new lotion but the tried and tested remedy of many years successful use.

Thousands upon thousands of horses which would have been ailing and sick and unsightly have been made fit and well—good workers and good lookers. What others have done with Absorbine you can do, too.

All enquiries on special cases answered without delay—full information and instruction on request. Absorbine \$2.00 a bottle at drug-gists or delivered.

Manufactured only by

#### ABSORBINE

does not blister or remove the hair, never leaves scars or blemishes of any kind.

It is easy to apply and does not require the horse to be laid up.

Highly concentrated and only a few drops required at each application.

# A Belt which Conveys ALL the Power

Practical men know the drainage of power from a slipping belt, *and because they know*, they are buying

## GOOD YEAR RUBBER BELTING

**Which Neither Slips Nor Stretches**

It is built up, layer upon layer, of close-woven, long-fibre, cotton fabric, rubberized and cured under Goodyear processes. And every Goodyear belt has in it the lowest possible minimum of stretch, because the belt is "cured" whilst stretched to the limit of safety in a special machine.

### That is the Goodyear Method of Belt Manufacture

And the result is entirely satisfactory to belt users—a fact to which our enormously increased sales testify. What is the significance of this **CONTINUED SALES INCREASE — 50%** over last year? Simply that Goodyear Belting more than fulfills the claims made for it by the

Goodyear people—who know what a belt should do, and make a belt to do it.

It has cost us less than \$200.00 for claims or adjustment of every kind in connection with our total output for the past two years—a remarkable tribute to Goodyear reliability.

### Look into the Belt for Yourself—Try to Tear It Apart.

Make a cut in the top layer—and then try to pull it apart. You will get a faint idea of its strength.

That is the result of forcing rubber at tremendous pressure through the fine cotton fabric—separating every strand—thus abolishing all internal friction or grinding. Whilst these layers of fabric are afterwards so compressed as to be almost homogeneous, the finished belt bends easily, the "duck" being so woven as to retain complete pliability in the finished belt.

**For Main Drives and  
High Speed Pulleys  
GOODYEAR Belting is the Best**

It has all the tensile strength necessary to absorb tremendous strain without slip, stretch or rent. The grip of rubber and the prodigious strength of hard-twist cotton fabric are united, and prove equal to every emergency.

Where the power transmitted is high, and great tensile strength is essential, Goodyear Rubber Belting proves its worth.

ber Belting proves its worth.

EVERY GOODYEAR BELT IS SUBJECTED TO A STRINGENT TEST BEFORE LEAVING THE FACTORY, and what is more, the materials used in the manufacture are also tested in the Goodyear laboratory before using.

### IF YOU USE A BELT AT ALL IT WILL PAY YOU TO USE A GOODYEAR

Loss of power is loss of profit—and an inferior belt is dropping power all the time. Goodyear belting quickly earns its cost in power saved and trouble avoided.

### TWO HUNDRED AND FORTY ROLLS—A TOTAL OF 72,000 FEET

We have just received an order for this quantity of GOODYEAR RUBBER BELTING from one business concern in the west, for the equipment of interior elevators. Such an order shows supreme confidence in the quality of GOODYEAR Belting.

If we have not just the belt you require we will make it for you.

In the choosing of belts our booklet would be of great assistance to you. We supply it free. Write to our nearest Branch for one.

## B. C. Stumpage Situation

Two important facts stand out in connection with the recent speech delivered by Hon. W. R. Ross, Minister of Lands for British Columbia, in moving the second reading of his bill to amend the Forests Act. In the first place, so far as the lumbermen of the province are concerned, the bill is one which involves the doubling of the royalty charge upon the cutting of timber. The present royalty is 50 cents per thousand feet. The royalty after 1916, if the bill is passed, will be \$1 per thousand feet. In the second place, it is evident from the speech of the Minister of Lands that the use of the Doyle rule in the mountain district of British Columbia is likely to be made the subject of an investigation with a view to adopt some other method of measurement which will bring better results to the government. The third feature of considerable interest is the announcement that the government intends to make a levy of 1½ cents per acre for the forest protection fund instead of 1 cent per acre. So far as the lumbermen of the province are concerned, therefore, the measure is one which will take from them sufficient money to enable the government to increase its expenditure upon conservation and forestry work. This may be said to be a logical outcome of the increased service which is being given by the government in the direction of preserving the forest resources of the province. It is scarcely to be expected that so radical a change in the direction of increased taxation will be greeted by the lumbermen with enthusiasm.

Mr. Ross' address in moving the second reading of the bill was fairly brief, and at the same time exceptionally interesting. In a general way he drew attention at first to the rapidly changing conditions in connection with the lumbering industry in British Columbia, and in connection with the forestry problems which it involves. He laid particular stress upon a general feeling that after the opening of the Panama Canal the value of timber in British Columbia will be greatly increased. This fact, together with the rapid opening up of the country by railways, the increase in population

owing to immigration and similar conditions in connection with the other province of Canada, was widening the markets for British Columbia lumber, and Hon. Mr. Ross mentioned them as factors which were certain to bring about a great appreciation in the value of British Columbia standing timber. In this way, he claimed that the government was amply justified in increasing the charges placed upon the lumbermen in the form of royalty. Throughout the address one note was clearly paramount, viz., that the increased value of timber was a legitimate excuse for increasing the taxation upon stumpage.

If this point of view is examined closely it becomes questionable whether the excuse is as legitimate as it appears at first glance. The increased value of timber does not involve increased profits to the men who cut it. This is an old assertion, but none the less true. The man who holds his timber is the one who makes money. The man who cuts it, in most cases, paid a price for his timber which was proportionate to the increased value of timber in general. What is more, when he comes to do the cutting he has to pay for his labor, machinery and supplies, prices which have increased in equal proportion to the increase in the cost of timber. Mr. Ross mentioned in particular, as a reason for increasing the stumpage charge, that the purchasing price of a dollar was much less than it was some years ago. If this is a good excuse for imposing a higher tax it also must be considered as an important offset, because the lumber operator is equally handicapped when it comes to purchasing timber, labor, machinery and supplies with money which has decreased greatly in its purchasing power. When the lumber operator comes to figure out the results of his operations, it is not often that he finds himself in even as good a position as the man who made lumber years ago, from timber which cost less and at a time when labor, machinery and supplies were also less expensive than they are to-day.

Following along the same line of thought there are other conditions to-day which co-operate with those already mentioned to prevent the lumber manufacturer from making any better profits than those who preceded him in the same business. The chief of these is the facility of transportation. Strange as it may seem at first glance, the multiplication of facilities for getting lumber to market is not an unmixed blessing. It not only multiplies the available market, but it multiplies the competition, and, though the markets are always there, they are not always good; whereas the increased competition which is created by greater facilities for transportation is always there, the only difference being that in times of depressed trade, the competition becomes more keen than at other times. With the lumber manufacturers of British Columbia this condition is one which has been brought home forcibly during the last two or three years. They have suffered greatly on account of the competition of lumber manufacturers from other parts of Canada and also from the United States. They have no redress against competition. They have not even the satisfaction of protection against foreign lumber, although up to date they have been handicapped in the markets of the United States by the heavy duty upon lumber entering that country. Though their markets are open to the world, practically everything they use in connection with their operations is protected by duty against foreign competition.

Increased stumpage on timber does not therefore bear close scrutiny as well as one might be inclined to think at first glance. It has the questionable effect of encouraging the owner of timber to hold on to it, in the hope of making more money through its increased value on the stump, rather than to convert into lumber. It discourages cutting, or rather it puts upon the man who cuts, a burden sufficient to enable the government to adopt modern methods of forest protection. Nothing but praise is due to the government for seeking to protect its forests sufficiently, but the important question to-day is how to impose the taxation to meet the costs. The man who cuts the lumber under present conditions, pays for the cost of protecting the speculative holder of timber against loss by fire and by the many other agencies who co-operate to reduce the value of standing timber. It might be reasonable to continue present methods if there were immediate danger of the timber resources being depleted, but

apparently the opposite is the case. The Minister of Lands reports as the result of investigations which have been made of late, that the annual growth of timber in British Columbia is greater by five times, than the quantity which is being cut. Therefore, large areas, he states, upon which the timber is over-ripe and where decay is taking place for want of cutting.

Under these conditions should not the government consider more thoroughly than it appears to have done, the necessity for encouraging cutting on such areas? Ought not the industry which actually creates the merchantable article out of the standing timber to be encouraged in a manner which would mean more certain profits, rather than the man who speculates upon the future value of timber left standing? In other words, ought not the stumpage charges to be imposed upon a basis which places the burden upon the party holding the timber, rather than upon the party who manufactures it?

The address of the Minister of Lands paid some attention to the fact that the charge for holding timber is extremely low. This charge figures out at 22 cents an acre in the coast district, and 18 cents in the mountain district, or from one-half cent to three cents per thousand feet of timber, according to the density of the stand. This provides the government with a reasonably certain income from its timber lands.

A careful reading of the speech of the Minister of Lands upon this bill leads to the conclusion that while he is actuated by a splendid ambition to make the forest resources a perpetual source of large income and to make the most of the timber resources for the people of the province, there is room for a consideration of the question of increasing the annual cut until it reaches the amount of the annual growth, and at the same time avoiding the placing of a burden upon the saw-milling business in which profits are always uncertain and

moderate only; seeking in fact, to secure its increased revenues, whenever necessary, more directly from those who make money out of the timber resources of the province.

That the proposed increased stumpage charges will meet with extensive and energetic opposition on the part of the lumber industry is indicated by events which have occurred since the introduction of the bill. On February 17th a conference was held between a delegation of nearly 120 representatives of the lumber and timber interests of the province and Sir Richard McBride and his colleagues. As a result of this conference the Minister of Lands has had further consultations with a committee of the delegation. The government has been informed that the announced intention of doubling the stumpage charge has created consternation among lumbermen. Resolutions had been passed by a meeting of lumbermen urging that if the stumpage were to be increased it should not become effective until 1918, and that then it should be raised to 75 cents only, and should remain there for ten years. Another resolution was passed to the effect that if the government would see to it that fire wardens were appointed purely upon their merits and not from any political consideration, no opposition would be offered to the increased charge of one-half cent per acre against the holders of timber for fire protection purposes.

The reply of the Premier to the delegation was not encouraging. It was practically to the effect that the lumbermen had had ample notice of the intention of the government to increase the stumpage charge; that the government needed the money, and that with the rapid expansion of markets which was taking place the lumbering industry ought to be able to foot the bill.

## First Report of B. C's. Forest Branch

The recently appointed British Columbia Forest Branch of the Department of Lands has issued its first report. The Branch is only six months old, but even in the short time since its organization it has done much to advance the cause of scientific management of the Forest Resource.

British Columbia has a wooded area which produces annually, according to a general estimate recently made, five times as much as is cut. The wise development of the whole timber growth and its protection from fire are the objects of the forestry movement now afoot in this Province. The most important portion of the work is the safeguarding of the merchantable timber already standing and the Chief Forester devotes the bulk of the report to a consideration of the ways and means of fire protection.

When the Branch was established last summer, the fire patrol force had already taken the field and it was therefore inadvisable to make radical changes in its methods of organization. Consequently the season's work was carried out under existing conditions. The work was remarkably successful in view of the small number of wardens employed, the weather being very favorable and only \$300,000 damage being done to the standing timber. A great deal of damage to young growth which cannot be calculated in figures should be added to the foregoing estimate, since the area burned over was no less than 116,000 acres.

There were 347 fires altogether. The cost of patrol and fighting fire to Government and private companies and individuals aggregated \$278,647. This does not include the money spent by the railroad companies in patrol along their tracks and by private timber owners in building trails and telephone lines in their holdings.

Over 9,400 permits for the burning of brush in land clearing, were issued and it is gratifying to note that only eight fires escaped, a result that shows that greater care is being exercised in slash burning.

The regular force of fire wardens in the past season consisted of 165 men, whose efforts were augmented during the most dangerous season by 48 special patrolmen.

The total area included within the sixteen fire divisions of the Province which were organized was about 125,000,000 acres, of which

it is estimated that about 80,000,000 to 100,000,000 acres are covered with some kind of timber, 50,000,000 to 65,000,000 acres are real forest land, covered with mature timber or valuable second growth.

The area patrolled last year averaged about 900,000 acres to each patrolman.

The railways, both those operating and those under construction, responded satisfactorily to the requests of the Provincial Forest Branch and the Board of Railway Commissioners, and gave attention to clearing debris from their rights of way and to their patrol.

The Chief Forester observes that in the nature of the country it is almost impossible to extinguish fires in many parts of the Province without some means of getting men quickly on the ground. To this end trails, telephone lines, tool caches, and ranger cabins are absolutely necessary. He regards a total mileage of 295 miles of telephone lines and 163 miles of trail as indispensable for the coming year, and urges for construction in the very near future an additional 1,020 miles of telephone line. Work on cabins and tool caches is to begin almost immediately. Already bids have been asked on six launches for Coast patrol and two for the Kootenay and Arrow Lakes.

The creation of forest reserves in which permanent improvements for the protection and harvesting of the timber can be made, is strongly recommended. In many districts these reserves are of most consequence for their influence in equalizing the flow of water needed for irrigation.

One of the most important duties of the Forest Branch is to investigate the lands which are supposed to be covered with timber and to report upon those which are more fit for agricultural crops than for trees. To this end, and to secure accurate data upon the extent of timber, the necessity for permanent improvements, etc., there were placed in the field last year twelve parties of reconnaissance surveyors, who covered about 4,700 square miles, and are now sending in their returns to Victoria.

The timber of the province has been reserved from alienation since 1907, but under the new forest act of 1912 timber sales are being made on forest areas that have been cruised and surveyed for that purpose.

As yet only a beginning has been made, but nevertheless the

sales already in hand will yield in royalty, upset price, and rental, about \$176,000 to the Government. The policy is to increase the annual cut up to the annual growth of the forest which is estimated to be about 6½ billion feet board measure.

During the year the Government scalers scaled 1,105,393,751 feet board measure of timber exclusive of that cut on lands Crown granted prior to 1887, on which one cent a foot is charged.

The total forest revenue for the year was \$2,753,579. Included in this are the rentals of special licenses, amounting in all to \$1,846,000.

## An English View of Spruce Situation

The spruce situation in connection with the exports from eastern Canada, is the subject of an article in a recent issue of the *Timber News*, of London, Eng., which says:—

"Changes are developing rapidly in the spruce deal business, and a feature which is becoming more prominent year by year is the expansion of the home and the United States demand. The continual extensions of the railway system in Canada are affording greater and greater facilities for supplying these markets, so that many productions which are most favourably situated for railway transport are abandoning the export trade altogether, as they find better results on the whole can be obtained in other directions. Moreover, as the logs now obtainable from the forests are getting smaller and the proportion of scantling and small sizes is becoming greater in comparison with previous years, the producers find it necessary to seek a better market for their smaller sizes. At present buyers on this side show little disposition to advance the value of such sizes beyond the old basis as compared with deals, consequently the manufacturers are attracted to the home demand, which pays very good prices so long as the small sizes are manufactured to the dimensions required by the buyers.

"There will always be mills so situated that it will suit them best to manufacture a straight specification for the export market. The freight question from such points is uncertain, and last year the difficulties in this respect became acute and quite a large line of stock which would otherwise have been shipped was left to be wintered over for want of tonnage. Some of these shipping points are, at present at all events, only available for sailers, and the rapid disappearance of sailing vessels as a carrying medium across the ocean renders the securing of such tonnage difficult and expensive.

"The situation and the outlook point therefore to a higher range

The Government expenditure, including the amount that constitutes the Government's half of the Forest Protection Fund was \$278,647. To this should be added the half of that Fund contributed by licencees and lessees of Crown lands and owners of Crown Grant timber, and railway companies amounting to a further \$127,570.

That is to say, the amount paid out from the public revenue of the Province for the protection and management of the provincial forests was one tenth of the total revenue received. The report points out further that out of every four dollars coming into the Provincial Treasury one is from the Forest.

of values for spruce and a reduction in the volume of the trade. Values cannot advance very materially, as the wood has many competitors on this side, and prices will be controlled by the values of other woods.

"The import last year was considerably less than that of the previous season, on a rough calculation about 20 per cent. less. This was largely due to the tonnage difficulty. The actual production of logs would probably equal that of the preceding year. The shortage is most apparent from the port of St. John, but a considerable reduction was also experienced in the shipments from the Province of Quebec. The liners are now bringing forward the accumulations at St. John, and as regards the Quebec Province, the home demand is absorbing the stocks very freely.

"It is a little early to speak about the quantity likely to be available for shipment to this country during the coming season, but the very open winter in New Brunswick and Nova Scotia, and what is still more unusual, the similar conditions to a lesser extent in the Province of Quebec, are bound to have a curtailing effect upon the volume of production for the season, no matter what the conditions may be for the rest of the winter. It does not seem likely therefore that the export of spruce can be excessive, and provided that general trade keeps satisfactory during the year, as it promises to do, no set-back in this wood should be experienced, beyond the usual fluctuations of a temporary nature. Even if freights drop to a normal level, it is unlikely that shippers of spruce will be forced to lower their ideas. Moreover, the manufacturers are firm in their ideas and stocks are already obtaining higher figures than those ruling last season.

"With respect to competing woods, there is no likelihood of any material drop in values. The reports from such producing centres all point to a reasonable production.

## As Others See Us—The Canadian Lumbermen's Association

The recent annual meeting of the Canadian Lumbermen's Association, was the most important which has yet been held and gave promise of greatly increasing influence for the Association. Canadians are sometimes inclined to take themselves too seriously and to expect results too soon. Some opinions about the Canadian Lumbermen's Association have occasionally been expressed which seem to be based upon an impatient desire for quick results. For the benefit of these we reproduce below, an editorial article which recently appeared in the *American Lumberman*, one of whose representatives attended the meeting at Ottawa. The *American Lumberman* said:—"The recent successful meeting of the Canadian Lumbermen's Association at Ottawa emphasizes several important facts. One pre-eminent and a most pleasing fact is that the association idea is growing among Canadian manufacturers and wholesalers. That idea has not spread as rapidly as it should nor even as rapidly as might be expected, yet a splendid beginning has been made in the half decade of the association's existence.

"This year's meeting of the Canadian association, however, saw the largest attendance and the most open discussion in the organization's history. The Canadian wholesalers and manufacturers, like those across the line, are learning more and more that it is not a detriment to one's own interest to give one's competitor the value of one's experience, for the simple reason that the abler one's competitor the

more likely his success; and the more his success the more sensible his competition; the more sane his methods, the greater the stability of the market in which both must do business.

"Evidently also the problems confronting the Canadian lumbermen are the same as those that perplex lumbermen on the other side of the line. Geographically that line is imaginary. The recent meeting demonstrated that commercially it is, to some extent, imaginary.

"Some of the problems now confronting Canada and Canadian lumbermen are old on the other side of the border. Canadian lumbermen may learn something from the experience of their brothers in the United States. Frankly, they may learn what to do in some cases and what not to do in others. That the younger student will solve some of these questions before the older is not unlikely.

"The Canadian Lumbermen's Association at present embraces somewhat usually divergent interests—the wholesalers and the manufacturers. At this stage of the association work in Canada this is the only way that Canadian lumbermen should be organized, that the wholesaler and manufacturer may give each other support and concentrate their attacks where attack is needed. There is room for a larger association in Canada. That association appears to be coming; and in the meantime manufacturers and wholesalers working shoulder to shoulder will learn their mutuality of interest and thereby achieve important results."

A busy Newfoundland lumbering port—Panoramic view of Botwood Harbor

# Important Newfoundland Company

**Large Modern Mill Erected at Botwood with a Capacity of 100,000 Feet in 10 Hours — Will Operate Night and Day During 1913**

Although the lumbering operations of Newfoundland do not bulk very largely in comparison with pulp and pulpwood operations, there are several interesting sawmilling operations and the indications are that for many years to come the lumbering business in the ancient colony will be one of considerable importance. As an indication of the growth of the industry in Newfoundland we take pleasure in publishing herewith an illustration of the plant of the Newfoundland Pine and Pulp Company, located at Botwood, and also an illustration of the harbor at Botwood. Mr. Harry J. Crowe one of the best known men in the lumber and pulp business in Newfoundland is president of the Newfoundland Pine & Pulp Company. The other officers are Hon. J. A. Clift, secretary-treasurer, James Quirk, Bridgewater, N.S., vice-president; Henry M. Whitney, director. The company is capitalized at \$1,000,000.

Another of the illustrations included in this article shows the steamship Parkhaven after taking on a cargo at the Point Leamington mill. This lumber was for shipment to Buenos Ayres and the cargo was the largest of white pine ever shipped to that port, viz., 2,790,000 feet. The vessel when loaded carried an 18-foot deck load. The illustration of the mill gives a fair idea of the plant but does not represent it exactly as it stands to-day, the construction not having been quite completed at the time the photograph was taken.

The mill of the Newfoundland Pine & Pulp Company was erected last summer and completed in October. It is equipped with a band mill and a band re-saw, together with the usual accompaniment of edgers and trimmers. It has a capacity of 100,000 feet in ten hours and will run night and day, so that the output will be 200,000 feet per day. White pine constitutes 80 per cent. of the cut. The company now have two cargoes of lumber on hand ready for shipment to South America as soon as open water is available. This was cut last fall after the opening of the mill.

The Newfoundland Pine & Pulp Company are operating upon about 1,700 square miles of timber land in the Exploits Valley and a conservative estimate places the stand of pine upon the limits at 300,000,000 feet. In addition to this the limits contain large quantities of spruce, fir and hardwood.

## Shipping to South America Markets.

The white pine of Newfoundland is shipped largely to South America. It compares favorably with Ottawa and Michigan white pine and is sold in Buenos Ayres alongside of Ottawa and Michigan pine at the same price. The output of the mill is practically all boards which are cut into about seven different grades. The best of these is known as number five, which corresponds with "clear" in the Ottawa trade. The "second clear" of the Ottawa trade is about the same as number seven grade of Newfoundland. Other Newfoundland grades are known as "A" which would correspond to "barn" and "C" which is a box board. Culls in the Newfoundland trade are known as "X" and "O."

Botwood is located on Notre Dame Bay on the northeast coast of Newfoundland. It is the shipping point for the Anglo-Newfoundland and the Albert E. Reed companies which have a railway line from their plants at Grand Falls, 25 miles distant, and Bishop Falls 12 miles distant. The docks at the Newfoundland Pine & Pulp company's mill are so situated that any sized steamer may load at them.

The new mill commenced cutting last October and will resume operations early in the spring of 1913. The company are taking out about 21,000,000 feet during the present winter of which 7,000,000 feet will be pine and the balance pulpwood. They have excellent logging facilities on the Exploits river and safe booming grounds at Botwood in which to store their logs.

The average width of the pine turned out in Newfoundland is 9 inches, although some of the stock is 12 inches wide. The lumber is of a fine knotted class and is somewhat softer than Ottawa pine. Samples which were recently shipped to Scotland for pattern work gave much satisfaction and were preferred to other classes of pine on account of their softness. Another feature of the Newfoundland pine is that it has very little shake, except in the case of the older growth which escaped the great fire some three hundred years ago.

It is the intention of the company to enlarge the operations of the plant at Botwood in the near future. A small plant, owned by the company at Point Leamington will be closed down, and the logs

Plant of Newfoundland Pine and Pulp Co., Botwood

Newfoundland white pine for Buenos Ayres

which would have been cut at this mill will be drawn to Botwood by logging railway, a distance of 20 miles.

#### Woodsmen Employed on Piece Work Basis.

In their woods operations the Newfoundland Pine & Pulp Company have adopted a rather unique system of securing good results from their labor. The men are practically all employed on a piece work basis. Instead of having a contractor in charge of the camp, every chopper and swamper is under an individual contract. These contracts specify a definite guaranteed wage per man. The wages are based upon a fixed sum per thousand feet or per cord. If, at the end of the month, the quantity cut by a laborer is sufficient to bring him in a larger wage than the guaranteed minimum, he is entitled to it all. In this way a strong incentive to work is provided and the company are getting much better results than they would otherwise. Each camp foreman has charge of about thirty men and his chief duty is to see that they do their work properly. The limits belonging to the company are much more uniform than most of the limits in Canada. The ground is smooth and it will be a comparatively easy matter to put in a logging railway. The company are thinking of using a gasoline motor running upon hardwood rails.

A feature of the camp life under the direction of the Newfoundland Pine & Pulp Company, which may cause some surprise to logging operators in Canada is the fact that, in order to make the conditions in the woods more attractive to the men, so that fishermen will take it up, bathrooms have been established in the camp, mattresses have also been installed and the men are given a good variety of the most wholesome food that can be secured. Last year, green apples purchased in the Annapolis Valley were supplied.

Mr. Harry J. Crowe, president of the Newfoundland Pine and Pulp Company, reports that during the present winter they are having excellent logging conditions in Newfoundland. The snowfall has not been so heavy as last winter and there is a good supply of men available for work in the woods. In connection with the Botwood mill and the Harmsworth operations there are now about 2,000 men in the woods. The three large mills in Newfoundland, those of the Horwood Lumber Company at Horwood, the Central Forest Company at Norris Arm, and the Botwood Company produced from 15,000,000 to 20,000,000 feet of lumber last year. This was somewhat less than usual, the decrease being accounted for by the severe winter of 1911-12 which curtailed operations in the woods.

#### Trade Conditions in 1912.

During the shipping season of 1912 the manufacturers of Newfoundland experienced the same difficulty in securing tonnage as those in the lumbering industry in Canada. As a result of this the Newfoundland Pine & Pulp Company were compelled to carry over about 4,000,000 feet of their stock.

During 1912, export prices of lumber in Newfoundland averaged \$27 at the mill for everything except mill culls. This price was about the same as in former years. The stock which brought this price would be about equal to what is known in eastern Canada as thirds and better. For number five stock which is practically clear, as high as \$71 was secured.

Mr. Harry J. Crowe is at present on his way to England on a business trip which will occupy about a month. His efforts on behalf of the lumbering and pulp wood industries in Newfoundland have been largely instrumental in bringing about the remarkable development of the last few years. Mr. Crowe was responsible for the carrying out of the Harmsworth and Reed deals. It is interesting to note that, in a speech delivered by Lord Northcliffe, some time ago, he referred to Mr. Harry J. Crowe as the pioneer of the great industrial development at Grand Falls, Bishop's Falls and Botwood. "If it were not for his efforts in connection with these great undertakings and great faith in the resources of Newfoundland," said Lord Northcliffe, "these great pulp works would not be here."

#### British Imports of Timber

British trade statistics indicate a decrease in the total purchases of timber and wood from Canada of \$894,700 in comparison with the previous year, and that compared with those of the year 1907 they indicate a total decline of \$1,603,585. The total imports of Great Britain, however, were last year \$1,725,790 less than the previous year, and \$6,154,415 less than the year 1907. The chief items from Canada affected last year were hewn fir, an increase of \$340,090; hewn oak, a slight increase; sawn or split, planed or dressed timber, a decrease of \$1,779,000; furniture woods, hardwoods and veneers, an increase of \$86,410; staves, an increase of \$13,155; unenumerated, an increase of \$444,425.

Canada's exports of "mechanical, wet pulp of wood" to Great Britain amounted to \$375,945, a decrease of \$432,225 in comparison with 1910, while those from Newfoundland indicate an increase of \$226,000, doubtless due to the increasing output of the Harmsworth mills. Great Britain's annual imports approximate \$5,000,000.

#### British Markets For Various Woods

There is now a much better relationship in England between merchants and shippers of wagon stock, and the latter should give every care and attention to grading. Quarter-sawn white is meeting competition from Japanese timber, which has been imported into Liverpool rather extensively of late. Quarter-sawn red has anything but a promising outlook. Plain white in prime quality is a good seller at improved prices, and No. 1 common is without a competitor. The outlook for this stock is good. Coffin planks are slowly but surely giving place to red coffin boards. For coffin purposes pitch pine is sometimes used. Odessa butts and Japanese logs are competitors in both price and quality. Square and round American logs appear to be giving way to cut stuff. With pitch pine the tendency is for lumber rather than log timber. Hewn arrives in steadily decreasing quantities; sawn logs, of course, hold the field for volume of imports, but lumber is increasing. It is noticeable that a few shippers who take a pride in their grading of lumber obtain much better prices than their competitors. There is no reason why every shipper should not gain by this means. Owing to high prices ruling, through greatly increased freights, pitch pine has serious competitors in Columbian and Oregon pine and this may become more severe when the Panama canal opens.

Skating rink floors laid with maple have proved an excellent advertisement. Now architects are insisting in it for schools, public buildings, private mansions, and mills. This desirable result could not have been attained, even with such great merit in the wood, had it not been for the highest possible standard of manufacture aimed at and accomplished by the producers.

#### The Reciprocal Demurrage Movement at Montreal

The Board of Trade are moving in the matter of reciprocal demurrage, and are gathering evidence in support of their case. The question is to be brought before the Railway Commissioners on a complaint from Winnipeg, and the Commissioners are requested to make the following resolutions.

"Railways shall forward loaded cars from point of shipment within forty-eight hours after shipping instructions are received from consignors.

"Railways shall transport such loaded cars from point of shipment to destination at an average speed of one hundred miles per day. Where loaded cars are transferred from one railway to another, twenty-four hours shall be allowed in computing time of cars in transit.

"Railways shall place cars for unloading within forty-eight hours after arrival at destination.

"For failure to comply with these rules, railways shall pay to consignees for each day's delay beyond the rules prescribed above, an amount equal to that imposed by the railways for delay to cars, provided that where failure to comply with these rules is the result of conditions beyond the control of the railways, no payment shall be made by them, the onus of proving the latter being upon the railways; and provided further that in applying these rules, Sundays and legal holidays shall be excepted.

"That disputes regarding the assessment of demurrage charges against the public and reciprocal demurrage charges against the railways, be placed in the hands of a responsible official of the Dominion Board of Railway Commissioners for adjustment."

In dealing with the question of reciprocal demurrage, the Transportation Bureau of the Board of Trade will also have to consider whether a penalty should be imposed on the railways for delay in supplying empty cars for loading. The Board's Transportation Bureau is of opinion that reciprocal demurrage rules would result in the railways overcoming many of the present causes for delay, especially in terminals. They are asking lumbermen for evidence in order to support their case.

#### Manufacturers Want Bulk Sales Act

The Canadian Manufacturers' Association have sent out a circular letter drawing attention to the necessity for a "Bulk Sales Act," in Ontario. Acts of this nature have been adopted in Nova Scotia, Quebec, Manitoba and British Columbia. The object of the legislation is to prevent a retailer from selling out his stock in bulk and making away with the proceeds, without settling with the manufacturer or wholesaler from whom he got his stock. For this purpose the acts usually require the purchaser of a bulk stock to secure from the seller a sworn statement showing from whom he bought his stock and what amounts are due upon it. The circular of the Canadian Manufacturers' Association says that there seems to be an organized indisposition on the part of some of the members of the Ontario Legislature to let such legislation go through. The circular asks manufacturers to communicate with their local members and ask their support for such an act this session.

# Stumpage Charges to be Doubled in B.C.

**Government Introduces Measure to Make Them One Dollar per Thousand Instead of 50 Cents—Hon. W. R. Ross's Speech on the Bill**

On February 10th, Hon. W. R. Ross, Minister of Lands for British Columbia, moved the second reading of the government's bill to amend the Forest Act. The proposed act will double the royalty upon timber, making it \$1.00 per thousand feet instead of 50 cents, and will increase the levy for fire protection from one cent to 1½ cents. Other provisions of a less important nature are included. In moving the second reading, Hon. Mr. Ross spoke for one hour, outlining the measures taken during the past year to develop the new forest branch of the Department of Lands. Coming to the plans for the present year he said in part: "The plans for the coming season foreshadow a 73 per cent. increase in the total forest protective force; on the coast a small fleet of government launches, now under construction, will aid greatly in the work of suppressing fires in this most important district of the province. Interviews that I have had with representatives of the lumbermen's associations lead me to look at no distant date for far closer co-operation between lumbermen and the government service in the matter of fire prevention than has been possible hitherto. Railway construction under provincial charter will be closely supervised under the provisions of the forest act, and finally, the district system of organization of the forest branch will make patrol of fire more effective in this province during the coming season than in any other section of Canada.

## Encouraging Economic Consumption

Discussing the encouragement of wood consuming industries, Hon. Mr. Ross said:—"A matter in which I am personally extremely interested is the encouragement and assistance that the government of this forest province hopes to give to the establishment of wood-using or rather wood-manufacturing industries in this country. Too much of our annual harvest of wood goes out of this province in the raw state as lumber; too little of it is manufactured here into furniture, vehicles, and the enormous variety of wooden articles that we import. The people of British Columbia are, therefore, obtaining only a small percentage of the profit that comes through the manufacture of our home-grown timber. Our friends on the other side of the International boundary have demonstrated how a government service may be of the greatest practical help to manufacturers of wood products. The fine wood-testing laboratories established at Madison, Wisconsin, and elsewhere, have conducted persistent experiments in testing the strength of different United States timbers; in investigating the commercial possibilities of woods hitherto supposed of inferior value for the manufacture of pulp and paper, or of lumber; in discovering and trying out new uses for timber hitherto wasted; in developing by-product industries such as the extraction of turpentine, and in many other directions.

"I want to see this same line of work started in this province. It is seldom worth while for private firms to expend money on prolonged experimentation. The utilization of British Columbia timber that is being wasted under present conditions; the investigation of methods of creosoting wood paving blocks; the commercial utilization of by-products such as turpentine and wood-alcohol, etc., must be the subject of study not by private individuals but by government experts. I hope we shall soon be able to make a start in British Columbia upon this useful work, and I look for the hearty co-operation of the lumbering industry."

## The Timber License Situation

Coming to the timber licenses and the royalties charged, Hon. Mr. Ross said in part:—"Such cursory examination as the officials of the forest branch have been able to give and the data available points irresistibly to the striking fact that the annual growth of timber in British Columbia is about five times the amount that lumbermen of the province are cutting each year. There are vast areas in which the forest is over-ripe—in which decay is greater than annual growth. Obviously, therefore, it is the duty of the government to encourage by every means in its power the increase of lumbering operations until the annual cut of the province equals the annual growth. Preliminary surveys already made disclose the existence of large and available areas of pulpwood in the central interior of the province. Everything points to the conclusion that the amount of timber remaining unlicensed or unleased in the hands of the government is much greater than has been supposed, and from every point of view a progressive policy of timber sales must sooner or later be undertaken. A progressive timber sale policy will—in view of the facts I have stated above, together with the great increase in royalty due to the progressive development of lumbering operations, and the re-

markable increase in stumpage values that will follow upon the opening of the Panama Canal inevitably produce a vastly increased forest revenue henceforward year by year.

"This brings me to the question of Forest Finance. There are in existence slightly over 14,000 timber licenses. The annual revenue from these licenses, by way of rental, amounts to \$1,846,000. The annual revenue from timber cut by way of royalty has increased nearly five fold in the last ten years and now amounts to nearly half a million dollars per year. The total revenue from the forests of this province amounts to two and three-quarter million dollars.

"The special license system of this province simply amounts to this—that the government gives cutting rights, or, as it were, the option on standing timber in return for an annual rental of 22 cents an acre west of the Cascades and 18 cents an acre east thereof, a charge that ranges roughly from one-half to three cents per thousand feet of timber, according to the density of the stand; while it requires the main payment on the public timber it sells to be made in the form of a royalty of 50 cents when the timber is cut.

"Now these are extremely favorable terms for the lumberman. He gets his timber on credit and, apart from the small charge of one-half to three cents per thousand feet each year, he has only had to pay, up to the present time, a stumpage price on the timber he cuts that is by far the smallest stumpage price on this continent.

## Charge to be Doubled

"We have until now been charging the price of fifty cents per thousand, a price fixed a quarter of a century ago. In 1907, when the present licenses were taken up, the Provincial Timber Inspector recommended an immediate increase of the royalty charge to \$1.00. In April, 1907, the government introduced a measure providing for an increase to 75 cents and at that time the lumbermen asked that the bill be allowed to stand over for a year, their arguments being to the effect that a committee should first investigate applying conditions, that lumbermen and not speculators would be affected, that although the lumber trade was then in good shape it might later decline in its prosperity and that, alternatively, if the royalty were increased, greater security of tenure and conditions should be given.

"To-day the government is charging nominally the same amount for the timber that it sells as it did twenty-five years ago. In reality it is charging far less than twenty-five years ago, since fifty cents in money then was worth far more than fifty cents to-day. One of the most striking features of contemporary history, especially in the West, has been the tremendous rise in prices. While the price of everything has enormously increased, the price charged by the government of this province for its timber has not increased; it has, as I have pointed out, decreased heavily—decreased, perhaps, to half what it was twenty-five years ago.

## A Left-Handed Compliment

"To sum the matter up, it is obvious that our provincial lumbering industry has emerged from its cradle and can stand upon its own feet without leaning upon the public treasury for support. It has gained a position in which it can afford to pay a reasonable market price for its timber. The opening of the Panama Canal the phenomenal increase in the population of the Prairie Provinces that form the market of our mountain sawmills, and the home demand for lumber caused by the great influx of population and prosperity into this province, all combine to assure a profitable future to our great forest industry.

"There is, of course, the obvious fact that the timber held in the 14,000 licenses now in existence varies greatly in quality, accessibility and density of stand from one license to another. Theoretically the royalty should be delicately adjusted so as to vary from place to place in accordance with the commercial value of the timber. But, at the present time, and under present conditions, nothing but the rough-and-ready flat rate of royalty is possible.

"There is, however, one possible variation of royalty in this province that requires serious investigation. The timber of the province falls roughly into two main classes, coast timber and mountain timber. The former grows in denser stands, contains a far higher percentage of No. 1 clear lumber, and for these and various other reasons may be, on the average, of greater value than average mountain timber. On the other hand, proximity to the prairie market adds to the value of the comparatively inferior mountain timber.

"The claim advanced by the mountain lumbermen is that they are entitled to a lower rate of royalty than coast lumbermen. In

practice, they have been obtaining this lower rate, to an extent that has never been defined, by means of the use in mountain mills of that extremely defective method of measuring timber known as the Doyle rule. The large overrun obtained by using this rule has resulted in the mountain mills paying a lower net rate of royalty than coast lumbermen.

"Now, as to whether, or in what extent, the mountain lumbermen are entitled to this lower rate I do not know. It is a most important question that can only be solved by prolonged, careful and impartial investigation, and not based, as it is at present, upon the unknown deficiencies of an indefensible method of estimating the quantity of timber cut at each mill. There are thus two separate questions involved. The first is the discovery of a scale, that is to say, a method of measuring mountain timber which will give approximately the same results upon mountain timber that the scale used upon the coast gives upon coast timber. The second is whether the nature of mountain timber justifies a royalty different to that charged by the government on coast timber. The British Columbia log rule has proved, in many respects, a thoroughly sound method of measuring the latter, but it was framed at a time when loggers cut timber into short logs and hauled them to the water by ox or horse teams. Since those days the donkey engine has revolutionized logging methods; far longer logs are now floated in the booms and scaled by government scalers, and upon these logs the British Columbia log rule gives results that are unfair to the government.

#### Scaling Investigation Proposed

"The whole matter of scaling in this province calls urgently for a most complete investigation. Both the government and the coast and mountain lumbermen must be represented in a manner to secure for all parties concerned a thoroughly square deal. I trust that at no distant date a commission will be appointed before which all parties interested may be represented, so that the matter can receive the thorough attention it deserves.

"Returning to the bill now before the House, I need say but little about the remaining amendments to the Forest Act that it contains. Provision is made for a more expeditious method of making timber sales than the act of last year provided; for permitting the export of pulpwood where that privilege would enable the new pulp and paper industry to enter the markets of the United States without the crushing incubus of the American tariff; while that part of the act which deals with the marketing of timber has been recast in order to fulfill the requirements of our modern system of timber inspection. Apart from the foregoing, the only change of importance that is proposed is the increase of the levy to the Forest Protection Fund to 1½ cents per acre—an increase rendered inevitable by the extensive protection that will be given to the timber lands of the province in the coming year by the Provincial Forest Service."

As a result of the changes proposed by Hon. Mr. Ross in the above speech, the lumbermen of British Columbia sent a delegation of about one hundred and twenty of their prominent representatives, on February 17th, to interview the government and oppose the increased charges which the new bill included. Resolutions which had been passed at a previous meeting were presented. One resolution was to the effect that if the royalty was to be increased nothing should be done until 1918, when it should be raised to 75 cents, and that it should remain at that figure for ten years. The other resolution was to the effect that if the appointment of fire wardens were kept free from politics and left entirely in the hands of the forestry board no opposition would be offered to the increase of one-half cent per acre to be assessed against the holders of timber for fire protection purposes.

#### The Premier's Reply to Objections

In reply to the representation made, Sir Richard McBride declared that he was astonished to hear it. He said that the lumbering interests had received notification of the contemplated action of the government in increasing the royalty on timber. Some years ago when the tenure of license holders had been fixed in perpetuity there had been an understanding that the royalty was to be advanced in time. He also noted that for years the government had been telling the people of the province from the floor of the House that it was the intention to rely on securing the revenue of the province largely from the natural resources of the country, and in this way to do away with taxation on personal and other property and other forms of taxation now existing. In the light of these facts, he said, the lumber interests must have had ample notice that they could expect increased royalty. The government had to secure revenue. The country was growing and they believed that with development which will follow the opening of new lines of railway and of the Panama Canal, all previous records of activity would be broken.

Lumber importations at Saginaw and Bay City for the navigation season of 1912 amounted to 86,737,741 feet, or approximately 2,000,000 feet less than in 1911.

#### A Unique and Well-Merited Honor

W. A. Anstie, New President  
Mountain Lumbermen

The honor which was recently done to Mr. W. A. Anstie by his appointment to the important position of president of the Mountain Lumbermen's Association is one which he thoroughly deserves. As secretary to the Association Mr. Anstie had been practically responsible for its great success. He is one of those enthusiastic young men who are never content with anything but complete success and he puts into his work a measure of enthusiasm and business ability which will always ensure success in any work which he undertakes. It is not to be wondered at therefore, when he resigned his position as secretary, in order to accept the position of managing director of The Forest Mills, that his confreres in the lumbering industry should conceive the fitting plan of making him the president of the association which he had served so conscientiously and successfully as secretary. This is indeed a peculiar and notable honor for any men to have achieved. Such cases are extremely rare and Mr. Anstie is to be congratulated upon the unique recognition of his services which has thus been made. It is the belief of all who know Mr. Anstie that both the lumbering industry in British Columbia and particularly The Forest Mills Company are especially fortunate in being able to count among their members a man of such outstanding energy and ability.

#### Mountain Lumbermen's Annual Meeting

At the annual meeting of the Mountain Lumber Manufacturers' Association, which was held at Nelson, B.C., recently, over eighty of the largest mills in the interior were represented, and the meeting went strongly on record in favor of asking the Federal Government to give the lumbering industry protection for the lack of which it has suffered severe loss on account of the dumping of United States lumber on the prairie markets. During the year 1912, it was stated, over 300,000,000 feet of United States lumber had been thrown on the prairie markets and prices had fallen considerably below the level which would give British Columbia manufacturers an adequate profit on their investments.

A resolution was passed to the effect that the provincial government should be asked to introduce an amendment to the Forest Act to provide for the enlargement of the forest board so that it might include two lumbermen who would act purely in an advisory manner. The general opinion of the members present was that the Forest Act was along the right lines.

A resolution was passed asking that the appointment of members of the forest protection service be taken out of politics; to give the chief forester power to appoint his men, and to make him personally responsible for securing officials who would carry out the work in the most satisfactory manner.

It was decided to send a memorial to the Provincial Government opposing any increase direct or indirect in the royalties charged upon timber. In its present condition the industry could not afford to pay any increase.

Information presented at the meeting showed that the mountain mills produced during 1912, 420,000,000 feet, a decrease of 60,000,000 feet as compared with 1911. Prospects for the present year were shown to depend largely upon conditions in the United States, which would regulate the quantity of lumber dumped upon the prairie market.

Mr. W. A. Anstie, who recently resigned the position of secretary of the Mountain Lumber Manufacturers' Association, in order to accept the position of managing director of the Forest Mills, Limited, was honored by the association by being elected its president for the coming year. Mr. C. D. McNab, of Waldo, B.C., was appointed vice-president, and new directors were appointed as follows:—F. W. Adolph, Baynes, B.C.; B. W. Sawyer, Chase, B.C.; H. H. Ross, Waldo, B.C.; and L. D. Roger, Golden, B.C. A. E. Frank, Assistant secretary, will be acting secretary until a successor to Mr. Anstie has been appointed.

The association also showed its appreciation of the splendid service to the lumbering industry which had been performed by Mr. A. Carney in his position as timber inspector for the Provincial Government, from which he is retiring. Mr. A. E. Watts, on behalf of the association, presented Mr. Carney with a handsome gold watch and a chest filled with \$20 gold pieces.

## Western Retailers' Annual Meeting

**Large Attendance and Spirited Discussion—Demurrage Increase Opposed—Officers for the Year**

The twenty-second annual meeting of the Western Retail Lumbermen's Association was held at Winnipeg on February 12th, 13th and 14th. Great interest was taken in the discussion on many of the points which were brought up. The chief event of the opening day was the reading of the report of the president. One of the points which he made was as to the folly of the present system of opening yards in new territory. In the town of Assiniboia there were, for instance, at least nine retail yards. It was impossible for all to remain there. At the end of a year the number would have to be reduced by one-half at least. Wherever there were too many yards, credits were abused by customers. In this connection it was of interest to note the proposed amendment to the Bank Act. This would apparently enable the farmer to borrow on his grain during the year, instead of waiting till the crop was harvested. He doubted whether the act would work out to the advantage of the farmers. The banks would simply use it when they wanted extra security. A farmer who could not borrow on his financial statement in general would find he could not borrow on his grain. If the banks did use the proposed new act they would be found in the position of preferred creditors, holding a mortgage on everything the farmer possessed which was not mortgaged to a loan company. The worst feature of the proposed amendment was that the banks could hold the farmers' grain security unknown to anyone else, as registration of the lien was not provided.

The president also paid attention to railroad troubles, saying that the increased demurrage charge was greater than the earning power of a car. If the railroads could get three dollars a day for all their cars they would probably stop operating.

The secretary's report drew attention to the fact that last year the railroads had failed seriously to supply cars for the lumber trade. Dealing with the credit situation the secretary said that in his opinion the association ought to draw up a credit application form to be signed by each customer asking for credit. This form should set forth the purchaser's financial standing and the terms under which the credit was given.

Mr. W. S. Fallis, president of the Credit Men's Association, delivered an address upon credits, which was much appreciated by the members, and was followed by a lengthy discussion.

Mr. Vere Brown, western superintendent of the Canadian Bank of Commerce, delivered an address upon the financial aspect of the lumbering business which was greatly enjoyed, and also led to a spirited discussion.

A motion was carried unanimously which declared the association to be opposed to the increased demurrage rates and in favor of reciprocal demurrage.

The election of officers resulted as follows:—President, Joseph Mergens, Weyburn, Sask., re-elected; First vice-president, A. B. Estlin; Directors; for Manitoba, E. M. Williams, Russell; W. G. Macconnell, Winnipeg; D. E. Sprague, Winnipeg; G. E. Davidson, Menitou; D. E. Fraser, Kenton; W. W. Ireland, Carberry; J. K. Robson, Treherm; J. A. Playfair, Baldur; A. N. Shaw, Elm Creek; for Saskatchewan, M. J. Walker, Weyburn; J. E. Walker, Rocanville; A. J. Ross, Salvador; N. Crest, Watrous; C. Campbell, Forget; F. J. Carpenter, Yorkton; H. E. Mielicke, Saskatoon; A. N. Winters, Aberdeen, and W. H. Haywood, Rouleau.

In the evening an excellent smoking concert and vaudeville entertainment was given which was attended by some 250 representatives of the trade.

### Lumbermen Entertain Boards of Trade

The Mountain Lumber Manufacturers' Association recently tendered a banquet at Nelson, B.C., to the Nelson Board of Trade and to the Associated Boards of Trade of eastern British Columbia. Mr. W. A. Anstie, the new president of the association, presided at the banquet.

### Western Lumber Freight Rates

According to recent reports from western Canada it is expected that the finding of the Dominion Board of Railway Commissioners in connection with the enquiry into western freight rates will include an adjustment of the lumber tariff, amounting to a reduction in the rates. The chief alteration expected is in the form of a concession making a uniform rate for a uniform mileage. This would enable shippers on a private line to secure the same rate as those on the main line, on shipment covering an equal distance. It is thought that this concession will be granted and if such is the case the lumber industry will be benefitted greatly.

### Annual Meeting of St. Maurice Protective Association

Montreal, February 18th:—Members of the St. Maurice Forest Protective Association, Limited, held their annual meeting and dinner at the Place Viger Hotel, Montreal, on Friday, February 14th. Mr. D. N. Brown, of the Quebec and St. Maurice Industrial Company, presided. The balance sheet showed assets of \$6,205. The receipts were \$20,968, including \$3,000 from the Quebec Government, while the disbursements were \$19,946, the balance in hand being \$1,021. The total assessment for the season was  $\frac{1}{4}$  cent per acre, divided into four assessments of 1-16 of a cent. The total acres patrolled were 11,215; the cost per acre to the association .00203 of a cent; cost per square mile to the association 1.303 cents; actual cost per acre .00277 of a cent; and the actual cost per square mile 1.778c.

At the dinner in the evening Mr. Ellwood Wilson presided, and among those present were: Messrs. G. C. Piche, superintendent of the Forestry Department, Province of Quebec; D. N. Brown, of the Quebec and St. Maurice Industrial Company; Frank Ritchie and Wm. R. Ritchie, of the Wayagamack Pulp and Paper Co.; R. F. Grant, of the St. Maurice Lumber Co.; J. M. Dalton, of the Union Bag Co.; W. Small and W. Wilson, of the Laurentide Co.; M. Lebrun of the Belgo-Canadian Pulp Co., Wm. Power, M.P.; Lieut.-Col. Hibbert, President of the Public Utilities Commission; W. R. Brown, of the American Forestry Association; Clyde Leavitt; R. H. Campbell, Superintendent of Forestry; W. C. J. Hall, chief of the Forest Protective branch of the Province of Quebec; and J. N. Dansereau.

The association has done excellent work by organizing for the protection of the limits from fire. Rangers are appointed, and look-outs provided at various points, while another feature is the provision of telephones, so that the rangers can be notified without delay and measures taken to check the spread of flames.

Hon. Jules Allard, Minister of Crown Lands of the Province of Quebec, was the principal speaker. He stated that the government would back up the St. Maurice Association by giving it more money than last year. The government also intended to compel every limit holder to protect his limits from fire. The government had decided upon a fine of \$5 per square mile for every limit holder who did not have proper fire rangers engaged on his land. The province had determined not to sell any more water power, but they would lease the water power for 75 years, allow twenty years to readjust the royalties, and base the royalty on the horse power generated. Moreover, if the companies had any surplus, the Government would compel them to sell the power to local users first at a reasonable term. If there was any dispute as to price, it would be settled by the Public Utilities Commission. The Minister described the system of forest protection in effect in Quebec province as the most perfect in the Dominion. While the timber areas of British Columbia were much larger, neither that province nor any other got the value from its resources that Quebec obtained. Quebec had larger markets, was better protected and secured a larger return. He was of opinion that other provinces might profitably copy the Quebec system.

Others speakers included Lieut.-Col. Hibbert and Messrs. W. C. J. Hall, R. H. Campbell, Clyde Leavitt, G. C. Piche and W. R. Brown.

### Hardwood Manufacturers Hold Interesting Meeting

The annual meeting of the Hardwood Manufacturers' Association was held recently at Cincinnati, Ohio, and was largely attended. A number of excellent addresses were delivered upon subjects of importance to the industry and lengthy discussions took place upon many of them. After the formal proceedings had been completed, the president, Mr. W. E. DeLaney delivered his address. The year 1912, he said, especially the latter half, had been a very prosperous one in all lines of business, including lumber. He believed this prosperity would continue during 1913, at least until the year's crops had become a factor in business calculations. Only unnatural causes could prevent continued prosperity.

There was ample timber in the United States, he said, if it were properly handled, to meet the demands for generations to come. It was quite true that timber was becoming less plentiful, as the annual consumption together with the waste exceeded the growth. If they would eliminate the waste and harvest their timber as other crops were harvested, within a short time the growth would equal the consumption. The effort to find a substitute for lumber for every purpose had about run its course. Great effort must now be made on the part of the lumbermen to prevent the misuse of lumber.

Mr. DeLaney drew attention to the frequent increases in lumber freight rates which had been made during the past few months by the railroads. These indicated a concerted effort on the part of the railroads to secure higher rates on lumber. The railroads appeared to be united in presenting evidence before the Interstate Commerce Commission. They were far better organized than the lumbermen. A thorough investigation of this subject would show that lumber, as a commodity was at present paying higher rates of freight than its just proportion. The lumbermen should unite their forces, employ ex-

perts to investigate their case and present it properly before the commission.

The report of the secretary, Mr. Lewis Doster showed that the number of complaints regarding shipments of lumber had decreased considerably during 1912. The total for that year was 4,133,137 feet, of which 1,084,011 showed a variation of 4 per cent. or under. During 1911 the amount of lumber complained of was 6,215,908 feet, of which 1,655,200 showed a variation of 4 per cent. or under.

A number of excellent addresses were delivered by members of the association and others and were greatly appreciated. An important feature of the meeting was the trading on the floor. At least 5,000,000 feet was submitted for buying and selling, in addition to the amounts that were offered in the lobby and other places during the convention.

Officers for the current year were elected as follows: President, W. E. DeLaney, Cincinnati, O.; 1st vice-president, J. H. Himmelberger, Cape Girardeau, Mo.; 2nd vice-president, B. B. Burns, Huntington, W. Va.; treasurer, C. M. Crawford, Coal Grove, O.

A resolution was carried, approving in a general way of the past accomplishments of the Federal Forest Service and strongly disapproving of any effort to distribute the national forests among the various states.

Another resolution was carried approving of the proposal that a system should be organized whereby various items of dimension manufactured from waste at individual mills might be accumulated, in order to fill orders which otherwise could not be handled by any one mill without prohibitive delay.

The attendance at the convention totalled about 500. No definite steps were taken in regard to the place for holding the next meeting. The matter will be settled by the executive during the year.

### Canadian Consumption of Railway Ties

Inquiries made during the past two or three years by the Department of Railways and Canals at Ottawa, with respect to the number and cost of railway ties has warranted the publication of the facts in that regard. Following are the figures taken from official schedules for the years 1907, 1911 and 1912:—

| Class        | Number of Ties |           |           |  |  |  |
|--------------|----------------|-----------|-----------|--|--|--|
|              | 1907           | 1911      | 1912      |  |  |  |
| Cedar        | 812,033        | 879,325   | 875,561   |  |  |  |
| Oak          | 779,857        | 462,443   | 314,579   |  |  |  |
| Hemlock      | 71,871         | 132,831   | 268,044   |  |  |  |
| Spruce       | 70,837         | 14,859    | 13,635    |  |  |  |
| Fir          | 43,518         | 7,826     | 15,656    |  |  |  |
| Tamarack     | 9,956          | 9,758     | 1,064,297 |  |  |  |
| Pine         | 6,697          | 250,843   | 437,493   |  |  |  |
| Chestnut     | 1,224          | 25,305    | 36,899    |  |  |  |
| Soft wood    | 466,759        | 517,085   | 498,404   |  |  |  |
| Hard wood    | 20,000         | 18,789    | 24,506    |  |  |  |
| Treated      |                |           | 157,105   |  |  |  |
| Unclassified | 2,921,013      | 4,521,882 | 3,642,957 |  |  |  |
| Total        | 5,203,765      | 6,840,946 | 7,349,136 |  |  |  |

| Class        | Cost of ties |           |           | Average cost per tie |      |      |
|--------------|--------------|-----------|-----------|----------------------|------|------|
|              | 1907         | 1911      | 1912      | 1907                 | 1911 | 1912 |
|              | \$           | \$        | \$        | cts.                 | cts. | cts. |
| Cedar        | 315,074      | 377,343   | 378,236   | 28.8                 | 42.9 | 43.2 |
| Oak          | 403,762      | 311,073   | 214,084   | 51.8                 | 67.2 | 68.1 |
| Hemlock      | 16,831       | 39,260    | 85,627    | 23.4                 | 29.6 | 32.0 |
| Spruce       | 24,699       | 3,387     | 3,969     | 35.0                 | 23.5 | 30.0 |
| Fir          | 22,398       | 2,343     | 4,423     | 51.4                 | 30.0 | 28.0 |
| Tamarack     | 2,312        | 4,032     | 580,009   | 23.2                 | 41.3 | 54.5 |
| Pine         | 1,556        | 163,884   | 274,101   | 21.8                 | 65.3 | 62.6 |
| Chestnut     | 636          | 15,780    | 19,152    | 52.0                 | 62.3 | 52.0 |
| Soft Wood    | 135,360      | 155,126   | 159,489   | 29.0                 | 30.0 | 32.0 |
| Hard Wood    | 5,300        | 5,301     | 6,304     | 26.5                 | 28.2 | 25.7 |
| Treated      |              |           | 125,731   |                      |      | 80.0 |
| Unclassified | 986,577      | 1,921,670 | 1,436,555 | 34.0                 | 42.5 | 39.4 |
| Total        | 1,912,505    | 2,999,099 | 3,287,683 | 36.7                 | 43.8 | 44.7 |

While there are unaccountable variations in the cost of certain varieties of ties, due to mistakes in classification, it may be safely assumed that the average for all classes is correct.

It will be seen that between 1907 and 1912 there was an increase of 2.18 per cent. in the average cost of ties. More or less complete inquiries in relation to prices which prevailed 10 years ago reveal an advance of 60 per cent. within that period. In the Western Provinces, especially on new lines, the cost is at least 50 per cent. higher than in the East.

The rising cost of ties has led to the application of preservative treatment, chiefly with creosote. During the past year 157,105 ties thus treated were put in use, the cost of which averaged 80 cents. It is claimed that the life of a tie thus treated is at least doubled.

With regard to the number of ties actually consumed in the Dominion, the 7,349,136 given above does not include construction work. The 1,330,37 miles of new line brought into operation last year therefore account for 4,650,000 other ties, to which at least 1,000,000 might be safely added for mileage which was completed, but had not been officially classified as operative.

In 1912 there were also 742 miles of second track, yard track and sidings constructed. Some of the ties in the above tables undoubtedly went into this work; but at least 2,000,000 might be added on account of such work charged to capital.

Adding together these various items, it will be seen that the consumption of railway ties in 1912 was not less than 14,999,136 and the total cost was in excess of \$6,700,000.

## Lumber Matters in the Law Courts

### Action Dismissed for Payment for Services in Effecting Timber Sale—Liability for Damage by Flood

Judgment has been handed down by the Supreme Court dismissing the action brought by Edmond Picard, a broker, of Paris, France, against Mr. Charles F. Lindmark, the Revelstoke Sawmill Company, and the Yale-Columbia Company for alleged services in effecting the sale of some valuable timber properties of the Dominion Sawmills Company, Limited. The properties are situated in the Arrow Lake district and were turned over to the English corporation for \$1,750,000. Under the terms of an option given him by Mr. Lindmark, whereby he was to get 9 per cent. if he made a sale of the properties for \$595,000, and all over that sum if he sold for a larger figure, Picard claimed \$150,000 commission or in the alternative the excess over \$595,000, amounting to over \$1,000,000.

This option was given on November 29, 1909, and Picard for several months busied himself in trying to find a purchaser. He interviewed many agencies and persons, and at the trial contended that he was negotiating with the agents of the Dominion Sawmills at the time he received a notice from Mr. Lindmark and the defendant companies cancelling his option.

The issues were fought out in a lengthy trial. The defendants' contention was that Picard had never effected an introduction to the agent of the Dominion Sawmills, or assisted the sale in any way, and that the two defendant companies were not bound by the option given by Lindmark. They said they had got into touch direct with the Dominion Sawmills and cancelled Picard's option after the sale to the Dominion Sawmills had been arranged.

In its judgment the court found that plaintiff had failed to make out his case, finding as a fact that "Mr. Picard had no contractual relationship whatever with the defendant companies. He neither got into touch with them nor attempted to do so." The action was therefore dismissed with costs.

### Company Liable for Damage by Flood

An interesting judgment has been rendered by Mr. Justice Hutchinson in the Superior Court at Sherbrooke, Que., in connection with the action brought by the township of Lingwick against the Brompton Pulp and Paper Company, for the cost of a bridge over the Moffatt Brook at Gould. It appears that in the spring of 1910 the water was in the book, and, in addition a large quantity of water was stored in McGill Lake and which was held back by a dam belonging to the company defendant. On the 8th of April this dam gave way, and a great volume of water came down the brook, carrying away the bridge in question besides destroying a large amount of other property in the vicinity. The corporation contended that the carrying away of the bridge was due to the fault and negligence of the company defendant. The corporation paid out the sum of \$978.36 to replace the said bridge, which had only been erected in 1908.

The defendant company contended that they were not liable, and pleaded that if the bridge had been properly built it would have been able to have withstood the volume of water in question.

The Court after reviewing the evidence of the experts who examined the spot, and the witnesses who saw the bridge carried away, held that the company was responsible for the loss of the bridge, owing to the breaking away of the dam at McGill Lake. The Court condemned the company defendant to pay to the corporation the sum of \$908.61 with interest and costs.

### Injunction to Prevent Sale

A report from Boston states that an injunction has been issued by Judge Crosby in the equity session of the Supreme Court restraining Rene Paine, of Brookline, and Clarence Hale, of Portland, trustees, from conveying a large tract of timber land to Nathaniel M. Jones and Harry W. Schofield, of St. John, N.B., and Edward Partington, of Glossop, Eng., et al, pending the determination of a suit brought against these men by Alfred L. Sweeney for \$200,000 damages for

alleged failure of the defendants to carry out a contract to purchase the Alexander Gibson Railway and Manufacturing Company.

So far as can be learned, the land covered by the injunction is in Maine and has no connection direct with the Gibson interests in New Brunswick, although Mr. Sweeney appears to be taking the action because of the failure of negotiations he had in connection with the Gibson purchase. The St. John interests say they do not fear any proceedings Mr. Sweeney can take.

### What Constitutes Fourth Quality Spruce?

A most interesting legal case was recently determined in London, Eng., when judgment was given in the Court of King's Bench in the case of J. & B. Groves, timber merchants, against Henry Smith & Company, packing case manufacturers. The plaintiffs sued for £300 18s. 5d. for goods sold and delivered under contract. The defendants claimed that the goods were not 4th quality St. John spruce; alternately that the goods were not a fair shipment of fourth quality and that the goods were not equal to sample, there being soft rot and an excessive proportion of plug holes. Practically the whole discussion and evidence centred around the grade of the goods in question.

The price which had been agreed upon was £8 per standard. A subsequent sale was made by the plaintiffs of similar spruce to another party for £8 7s. 6d. per standard.

In the evidence regarding the percentage of plug holes permissible, great variation of opinion was shown. The defendant claimed that it should not be more than 5 per cent., whereas some witnesses claimed that it might be as much as 100 per cent., claiming that fourth quality spruce was rejected from second and third because of some defect, which might be plug holes.

His Lordship Mr. Justice Scrutton, sitting as a commercial judge, gave judgment for the plaintiffs. With regard to the allegation that the goods were bought on sample, he held that they were not so bought, but that the sale was on description. There had, he said, been no warranty that there should be any percentage of plug holes, and therefore the only question was whether the parcel was or was not 4th quality St. John spruce as understood in commerce. The defendants said that there were too many pieces with plug holes in the parcel, but he (the Judge) had come to the conclusion that there was no settled mercantile usage as to the percentage of defective pieces which a parcel might contain. He found that according to mercantile usage there had been a good delivery of St. John 4th quality, and gave judgment for the plaintiff on the claim and on a counterclaim for expenses incurred by defendants, with costs.

M. J. O'Brien is suing the Abitibi Mining Company for \$15,000 for alleged trespass upon his timber limits in the Larder Lake district. The plaintiff alleges that the defendant company allowed its employees to trespass upon his limits and to take off timber needed in the construction of the various buildings connected with the mining plant. The trespass is not denied, the dispute being chiefly as to the sum due to the plaintiff.

### U. S. Forest Service Discontinues Price Lists

Because of the extent to which private agencies are now collecting lumber price data, the Secretary of Agriculture has decided to discontinue publication by the Forest Service of its quarterly issue of mill and wholesale lumber prices.

When the Government began to publish these compilations detailed statistics upon production, consumption, and prices were available for all of the great industries which produce and handle raw materials, lumbering only excepted. Many of these statistics were being gathered by the Federal Government, particularly the monthly crop reports and cotton reports. Prior to 1905 the lumber industry, then fourth and now third largest of the country, lacked even annual statistics of production. In that year a compilation of the lumber cut was started by the Forest Service, with the co-operation of the Bureau of the Census. Authentic records of prices of standard grades in the centers of distribution did not become available until 1908, when the Forest Service began its record of wholesale prices. This record, by leading markets, was published monthly until November, 1910. Since then it has been compiled and published on a quarterly basis.

After a year's publication of market prices there was a general demand for the compilation of prices at the mills, since the market quotations included freight and other costs subsequent to manufacture, and did not show the prices received by manufacturers. In July, 1909, the Forest Service began a quarterly publication of mill prices of lumber, which except for minor changes in species and grades has been continued without change until the present time.

Within the past two years lumber associations and other agencies have taken up actively the work of compiling and publishing lumber prices in most of the lumber-producing regions. Under these circumstances it is considered unnecessary for the Government to continue this work, except to the extent necessary for its own information.

Hence the decision to discontinue the quarterly publications of the Forest Service. The usual January issue containing the prices for October, November, and December is not to be brought out.

### Yellow Pine Shipments During 1912 Exceeded Cut

The annual meeting of the Yellow Pine Manufacturing Association was recently held at New Orleans and was of great interest to the members and the trade in general.

The secretary's report stated that manufacturers of lumber, both north and south have been called upon for stock in such quantities that their shipments exceeded the amounts produced and left nearly all of them on January 1st, 1913, with less stock than they had held a year previously. The production of yellow pine had been much larger during 1912 than during 1911. The production of 1,208 mills reporting in 1911 and 1912 was as follows:—1911, 8,245,957,356 ft.; 1912, 9,086,953,291 ft. During the year, 29 new mills commenced sawing, the output of which was 156,481,667 ft., making a total production YELLOW PINE Shipments During 1912 Exceeded CUT . . . T during 1912 among 1,237 mills of 9,243,434,938 ft. During 1912, 97 mills went out of business which had produced in 1911, 478,297,566 ft. The net increase in production during 1912 among the 1,208 mills above mentioned was, 840,995,915 ft. or 10.20 per cent. over 1911.

The cut of 309 miles for which special statistics were secured amounted to 5,195,999,401 ft. and the shipments of these mills amounted to 5,200,593,734 ft., showing an excess of shipments over cut, of 4,594,333 ft. or 0.09 per cent. These mills showed an increase in cut of 298,310,623 ft. or 6.93 per cent. above 1911. The same mills shipped 337, 638,495 ft. more than in 1911, an increase of 7.80 per cent. The shipments of these mills during 1912 totalled 4,652,368,801 ft. and the cut totalled 4,600,502,299 ft. showing an excess of shipments over cut of 64,734,502 ft. or 1.41 per cent.

The stock on hand, January 1st, 1913, among 307 mills, with a total cut of 5,517,164,709 ft. during 1912, showed a decrease as compared with January 1st, 1912, of 23,910,707 ft. or 1.85 per cent. The excess of shipments over cut was 4.33 per cent. The lumber on hand, among 151 mills, with a total cut of 2,846,149,089 ft. during 1912 was 63,740,348 ft. below normal.

### Personal Briefs of the Trade

Mr. A. MacLaurin, of the Campbell-MacLaurin Lumber Company, Montreal, has been on a visit to Atlantic City, N.J.

Mr. Arthur Rushforth, of the Dominion Mahogany & Veneer Company, Limited, Montreal, is on a visit to England.

Mr. P. D. Gordon, of Mason, Gordon & Company, has been elected a member of the Transportation Bureau Committee of the Montreal Board of Trade.

Mr. P. D. Roe, formerly of the Emerson Lumber Company, Port Moody, B.C., has consented to become a candidate for the position of first mayor of Port Moody.

Mr. Alvin Schlarbaum, B.A.Sc., has been appointed hydro-electric engineer for the Riordon Pulp and Paper Company, Limited, of Hawkesbury and Merritton, Ont. He was formerly with Messrs. Smith, Kerry & Chace of Toronto.

The third annual banquet given by manager C. Belton of the Laidlaw Lumber Company, Sarnia, Ont., to the chiefs of the different departments, was held recently at the Vendome Hotel, Sarnia. About twenty guests were present and a most enjoyable evening was spent.

Mr. John Story, one of the oldest employees of the R. Laidlaw Lumber Company, Toronto, recently severed his connection with that firm to become manager of the new office at Calgary, Alta., which is being opened by the Seaman, Kent Company of Meaford and Fort William. A number of Mr. Story's old friends in the R. Laidlaw Lumber Company tendered him a complimentary dinner on the evening of February 14th, at which a most enjoyable time was spent, and many expressions of esteem for Mr. Story were delivered. At the conclusion of the dinner Mr. Story was presented with a handsome fur-lined overcoat on behalf of a number of his friends.

### Distinguished Honor for Hawkesbury Citizen

The King of Norway has made Mr. C. B. Thorne, manager of the Riordon Pulp & Paper Company at Hawkesbury, Ont., a Knight Companion of the first class of the Royal Order of St. Olav, and the insignia of the order has just been handed over to him by the Norwegian consul general for Canada Mr. F. Koren, at the office of the consulate in Montreal. A few members of the consular service in Canada hold decorations of the order, but Mr. Thorne is the only private citizen to be so honored. He is a Norwegian by birth, but has been in Canada for ten years, most of which time has been spent in the pulp and paper industry. His philanthropic work among Norwegians making their homes in Canada is stated to be the reason for his being signalled out for distinction by the King of Norway.

# Workmen's Compensation Enquiry

## Details of Proposals Put Forward — Important Bill Likely to be Introduced Soon

The enquiry which has been in progress for some time by Sir William Meredith, acting as a government commissioner, into the question of workmen's compensation has now reached an advanced stage, and a Bill is to be introduced at the present session of the Ontario Legislature. The enquiry has covered the field most exhaustively in Canada, the United States and Europe. No single body of evidence which the commissioners secured has been more valuable than the brief which was presented by Mr. F. W. Wegenast, representing the Canadian Manufacturers' Association. So thorough was this brief in fact, that the Commissioner paid Mr. Wegenast the remarkable compliment of including it, in its entirety, in his interim report. Some of the points brought forward by Mr. Wegenast are of much importance to manufacturing employers, particularly to those engaged in the lumbering and woodworking industries. Mr. Wegenast prefaced his brief with the following statement of principles:—

### Statement of Principles

In framing a system of workmen's compensation, the following principles should, it is submitted, be kept in view and so far as possible observed.

First: For reasons both humanitarian and economic the prevention of accidents should be a prime consideration in any scheme of workmen's compensation, and no system can be satisfactory which will not tend to produce the maximum of effort and result in conserving the life, health, and industrial efficiency of the workman.

Second: Relief should be provided in every case of injury arising out of industrial accident. Such relief should not be contingent upon proof of fault on the part of the employer, but gross carelessness, drunkenness, or intentional wrong on the part of the workman should be penalized in some way.

Third: The system of relief should be adapted to cover wage-workers in every industry or calling involving any occupational risk, and should not be confined to such industries as railroading, manufacturing, building, etc.

Fourth: The relief should be as far as practicable by way of substitution for the wages of which the injured workman and his dependants are deprived by the injury. It should, as a rule, be periodical and not in a lump sum.

Fifth: The relief should be certain. It should not depend upon the continued solvency of the employer in whose service the injury was sustained.

Sixth: The amount of compensation should be definite and ascertainable both to the workman and to the employer. The system should entirely displace the present method of compensation by an action for damages, and the employer should not be subjected to any further or other liability except in cases of gross carelessness or intentional wrong on the part of the employer.

Seventh: The funds for relief should be provided by joint contributions from employers, workmen, and the province. Employers and workmen should pay in such proportions as represent the number of accidents occurring by reason of the hazard of the industry and the fault of the employer on the one hand and the fault of the workman on the other. The province should contribute an amount representing approximately the cost of administration.

Eighth: The system of relief should be such as to secure in its administration a maximum of efficiency and economy, and as large a proportion as possible of the money contributed should be actually paid out in compensation.

Ninth: The procedure for the adjustment of claims should be as far as possible dissociated from the regular courts of law. It should be simple and calculated to involve in its operation a minimum of friction between employer and employee.

Tenth: The system of compensation should be directly associated with a system of inspection with a view to the prevention of accidents and a system of prompt and expert medical attendance to mitigate the effect of the injuries.

Eleventh: The system should be such as to secure as liberal a measure of relief as possible without undue strain upon industry.

Twelfth: The system should be such as to afford some promise of permanency.

The rest of Mr. Wegenast's brief consisted of a concise discussion of these principles and their application in connection with the important workmen's compensation laws which have been passed in other countries.

### System Recommended For Ontario

The brief recommended the establishment of either a collective liability or a state insurance system. An individual liability system, it said, would not be acceptable to the manufacturing interests of the province. The Canadian Manufacturers' Association declared themselves ready to give every assistance in the organization of an independent, non-state, collective system, but they believed that under all the circumstances the most economical and satisfactory plan for the province of Ontario would be a collective system under provincial administration and control. They recommended the creation of an independent, non-political, provincial insurance department administered by a board of three commissioners who should provide pay-

ment of all claims out of a fund raised by premiums levied upon the pay roll of industries classified according to hazard.

The annual assessment of premiums should be levied upon the basis of the current cost of compensation payments, with a margin for an emergency fund. A percentage of the premium rates representing the proportion of accidents due to the fault of the workmen should be chargeable at the option of employers, and upon due notice to the workmen and deducted by employers from the wages of the workmen.

It is expected that the bill to be introduced will be very largely based upon the principles outlined above. It is therefore, of the utmost importance to all in the lumbering and woodworking industries to study the situation closely, so far as it affects their business, and to send to the secretary of the Canadian Manufacturers' Association or to the Canada Lumberman any recommendations which they consider of importance.

### Results of the Washington System

It is interesting to note some of the results of the system adopted by the State of Washington which is nearly the same as that which has been recommended by the Canadian Manufacturers' Association. The Washington system was worked out by the lumbermen of the state, who were the principal factors in the movement. The scale of benefits in Washington provides \$20 per month for the widow of a workman who has been killed. This payment continues until the death or re-marriage of the widow and an additional \$5 per month is paid for each child up to the number of three, making the maximum payment to the widow, \$35 per month. In the case of total disability, the injured workman gets a pension of \$20 per month and \$5 for each of his children up to a total payment of \$35. A proportionate scale of benefits is provided in the case of temporary disability or permanent partial disability. The compensation is paid regardless of the question of fault, the only question being whether the accident occurred in the actual performance of the employee's work.

In the lumbering group the basic rate charged was 2.50 per cent. of the pay roll. During the fifteen months' period ending December 31st, 1912, only 9-15 of this rate was levied; reducing the percentage to 1½ upon the annual pay roll. The state makes a contribution covering the total cost of administration. In the group of industries including lumbering, milling, etc., there was 1,237 employers during the fifteen months above referred to, and 42,164 workmen. The levy is 1.50 per cent. resulted in contributions amounting to \$479,605.75, out of which payments were made to injured workmen still living, amounting to \$317,264.65; and to dependents of workmen who had been killed, \$16,309.23. Reserves were set aside amounting to \$140,439.37 to insure the continuance of these pensions. This left a cash balance on hand of \$5,592.50. The number of deaths during this period from accidents was 55, upon which pensions were required, and 49 upon which no pensions were required, but on account of which burial expenses had to be paid.

Similar statistics for the woodworking industry show that the number of employers was 295, and the number of workmen 4,304. The payments were only made for eight months out of the fifteen. The total amount levied was \$36,620.19, out of which payments were made to injured employees still living, amounting to \$29,257.07, and pensions to dependents of workmen who had been killed, of \$125.32. The sum of \$1,132.48 was set aside as a reserve to insure the continuance of pensions and a balance of \$6,105.32 was left in the fund. Only one death was reported in this group.

### Downward Revision of U. S. Pulp and Paper Tariff

Several Canadians were present at the Convention of the American Pulp and Paper Association, recently held in New York. The speeches naturally centered around the tariff question, and most of the speakers were of opinion that any revision would be in a downward direction. Among the Canadians present were Messrs. Carl Riordon and T. J. Stevenson, of the Riordon Pulp & Paper Company; Mr. J. H. A. Acer of the Laurentide Company, Montreal; Mr. F. Powell, of the News Pulp & Paper Company, Montreal; Mr. F. H. Anson, of the Abitibi Pulp & Paper Mills, Limited, Montreal; Mr. W. Whyte, manager of the same company; and Mr. Howard Smith, of the Howard Smith Paper Mills, Limited, Montreal.

Herman H. Hettler, Jr., son of Herman H. Hettler, of the Herman H. Hettler Lumber Company, died recently at St. Luke's Hospital, Chicago, from the effects of an operation. Mr. Hettler was born July 26th, 1892. He recently graduated from the Chicago Latin school, and was preparing to enter Yale.

The late Mr. Caldwell, lumber merchant of 131 Bloor street west, who died on December 27th, 1912, left an estate of a known value of \$80,819 besides mining claims in the Slocan district and Rossland, B.C., the value of which has not been ascertained. The property was left to his wife and children.

## 3 in.-4 in. COMMON LUMBER 10 in. and 12 in.

The Latest and Most Modern Method  
Price for Common

A Cost of 75 Cents per Thousand Feet Board Measure

In many sections of the country, East and West, in spite of the utmost care in sawing there accumulates a vast amount of common lumber, 3", 4" and even 6" wide, which at times is almost impossible to move without cutting the price several dollars per thousand. Most lumber manufacturers would be satisfied were it possible to obtain from their narrow width common lumber the actual cost and, in most instances, in order to move the accumulated stock quickly they are compelled to sacrifice.

By the Linderman method two 4" strips can be joined to make 8" shiplap at a cost which will not exceed 75c per thousand feet, and a comparison of the figures between 8" shiplap and 4" common lumber at what it is sold for, adding to it the cost of joining it together by the Linderman method and the cost of milling it, leaves a net increase in price of from \$2.50 to \$4.00 per thousand. 10", 12" or even wider widths can be built up in the same manner and at the same cost per thousand, no matter whether the lumber being worked is spruce, hemlock, fir, cedar or pine.

Narrow lumber can also be joined together for rough sheathing, partition work, barn or subflooring and other purposes.

There are Eight Different Lengths of Linderman Machines Built  
Ten, Twelve, Fourteen and Sixteen

# CANADIAN LINDERMAN COMPANY

## ER Converted into 8-in., SHIPLAP

For Obtaining a Greatly Increased  
in Lumber

Yields a Return of From \$4.00 to \$5.00 per Thousand

Shorts and odd lengths can be joined to narrow widths, making a composite board of any length desired up to 16'. This is accomplished by running a binding strip on the outside the full length desired and joining to it two or more pieces of miscellaneous lengths that will equal the length of the binding strip. To this can also be joined another series of short lengths so arranged that the butt end joints will not come opposite one another and to this then can be joined the second outside binding strip. Such a composite board will show tight joints not only where they are joined together on the edges but the butt ends of the boards will be tight, making a board as strong and stronger than the natural wood. Such a product, while it may not bring a price equal to a wide board of the same dimensions, will yet yield a profit of several dollars per thousand over the cost of manufacture. In this way the cuttings from the flooring machines or from the sawmill can be converted into a marketable product instead of as now being sold as kindling or sent to the burner.

Full information and particulars in detail will be gladly given and we will arrange to work samples of our own stock if you so desire.

# Forestry Developments of Past Year

## Important Measures Inaugurated in Many Parts of Canada — Fire Patrol and Extensions of Reserves the Chief Questions of the Day

At the fourth annual meeting of the Commission of Conservation held at Ottawa on January 21st, Mr. Clyde Leavitt, Forester of the Commission, presented the report of the committee on forests. The two most important accomplishments of the Commission, he said, along forestry lines in the past, had been the establishment of the Rocky Mountains Forest Reserve and the Government control of the railway fire situation through the amendment of the railway act and the issuance of appropriate regulations by the Board of Railway Commissioners. The order of the Board of Railway Commissioners passed on May 2nd, 1912, had been the beginning of a new era in railway fire protection in Canada. This order went further in placing, upon the railway companies themselves, where it belongs, the responsibility for preventing fire along their lines, than had any similar legislation in the United States or Canada. On the whole the plan had worked out very satisfactorily. Fortunately, the last half of the fire season, after the instructions were effective proved unusually wet, so that fire losses were exceedingly light, and the efficiency of the newly formed organization was not unduly strained. With the better organization available the work would probably be handled in a really efficient manner during the season of 1913.

After the work had been organized in the west, it was too late to organize in the east for the small remaining portion of the fire season of 1912. The matter of co-operation had, however, been taken up by the Board with the Governments of the Provinces of Ontario, New Brunswick, and Nova Scotia. It was believed that the organization would ultimately be completed and that the patrol provisions of the order would be extended to cover the entire Dominion during the fire season of 1913.

### The Disposal of Brush After Lumbering

A portion of the report of the committee dealt with the disposal of brush from lumbering operations. Comparatively little had been done as yet in Canada in this regard, except on paper. The slash

menace was undoubtedly the most serious in connection with efficient fire protection. In meeting this problem, the newly established forest policy of British Columbia was the most progressive in Canada, since full discretionary authority was given to the Minister of Lands in prescribing the measures to be taken, and efficient enforcement was provided from the organization of a fully-equipped forest branch.

In the issuance of all future licenses and in the renewal of existing licenses the Dominion and Provincial Governments should, in addition to the question of ensuring reproduction, take fully into consideration the prevention of fires through proper brush disposal. In many cases the present difficulty was not so much a lack of legislation or regulations as of suitable administrative machinery on the ground for the enforcement of the existing provisions. More complete provision should therefore be made for the proper enforcement of such requirements through an increase in the fire staff and by raising the standard of personnel through the general adoption of the merit system of appointment and promotion.

Provision was especially needed for the proper disposal of slash along all railways through forest country.

The report emphasized particularly the importance of a general stock-taking to determine the extent and location of the forest resources of Canada. A false sense of security had prevailed in the past, due to the general belief in the existence of forest resources very much greater in extent than actually exist. A forest survey of the entire Dominion would be a tremendous task for the Commission of Conservation to undertake directly. It would require years of effort, the building up of a large organization and the appropriation of a very large sum of money. It would not be necessary, however, to handle the situation in this way. The province of Nova Scotia had completed such a survey of its forest resources. The Forest Branch of the Department of Lands of British Columbia had already begun a forest survey of that province. It was most logical that this class

The export of forest products from Canada from 1868 to 1912 are shown above in a statistical table issued by the Department of Trade and Commerce. The figures for the year 1907 are for nine months only, as the date of the fiscal year was then altered.

of work should be handled through action by the local organizations. The report recommended also that the various governments should make a systematic collection of complete statistics of forest fire losses.

Referring to the forest resources of Northern Ontario, the report said:—

A brief preliminary reconnaissance of a portion of Northern Ontario was made last summer for the Commission by Mr. J. H. White, of the Faculty of Forestry at Toronto. This examination shows that a very large percentage of Ontario west of Sudbury and south of the height of land is absolutely non-agricultural and is valuable only for the production of timber. Fires have done enormous damage, especially during the period of railway construction. However, a great deal of valuable young growth has come in and requires protection in order that it may reach maturity. To some extent merchantable timber remains, back from the railways, which has not yet been included in forest reserves or in timber limits.

Ultimately, the whole territory south of the clay belt, lying between the Temagami and Nepigon reserves should be included in permanent forest reserves and protected and administered under forestry principles. This section will unquestionably prove a source of large revenue to the Province in the future. However, the area is so large and the immediate possibilities for revenue are so limited that it seems doubtful whether reservation would be considered justified at the present time by the Provincial authorities, in view of the very large expense involved.

It is therefore recommended that an arrangement with the Provincial Government be made, if possible, for a co-operative examination next summer of a portion of this region, for the purpose of securing more detailed information as to just what action it is most important and most practicable to take in the matter.

The movement in the direction of co-operative fire protection was briefly discussed in the report, approval being expressed of the efforts made by the St. Maurice Valley Forest Protection Association.

#### Recommendations of the Committee

In conclusion the report recommended:—

(1) That the Commission approve the principle of co-operation between the Board of Railway Commissioners and the fire protective organizations of the Dominion and Provincial Governments in the administration and enforcement of the fire regulations of the Railway Commission, along the lines now in effect in the west and as proposed in the east.

(2) That representations be made to the Dominion Government looking toward the establishment of a fire-protective service along the Intercolonial and National Transcontinental Railways similar to that provided for in Order 15570 of the Board of Railway Commissioners.

(3) That the Governments of New Brunswick and Nova Scotia be urged to organize separate branches devoted especially to forest fire work, including all lines of railway fire inspection, as well as the handling of fire-ranging throughout the Province at large. Also that control be definitely taken over with regard to fire-protection along provincially chartered railways, through the enforcement of existing legislation or the enactment of new legislation where necessary.

(4) That the Commission urge the Dominion and all Provincial Governments not now doing so, to consider carefully the question of brush disposal in connection with all new licenses and renewals of old licenses issued in the future. Especial care in this connection is needed to safeguard the country along railways and wagon roads. Especially in Ontario, New Brunswick and Nova Scotia and in the Timber Branch of the Department of the Interior is the further-development of a forestry organization essential in order properly to study and administer this feature of the work. The extension of the merit system of appointment and promotion is essential to efficient organization.

(5) That the Commission approve the organization of co-operative fire-protective associations of limit-holders, and the principle of contribution by the Dominion or Provincial Government in proportion to the benefits received.

(6) That the Dominion Government be urged to begin a systematic study of the extent and character of forest resources in the forest reserves, and other forest lands under its direct jurisdiction; and that a similar course be urged upon the Provincial Governments of Ontario, Quebec and New Brunswick as to forest lands within their boundaries.

(7) That the systematic collection of complete statistics of forest fire losses be urged upon the Dominion and Provincial Governments wherever this action is not now being taken.

(8) That the Commission approve co-operation with the Government of Ontario in an examination of forest conditions outside forest reserves in the northern portion of that Province, south of the Clay Belt, and that favorable reciprocal action by the Ontario Government be invited.

(9) That representations be made to the Dominion Government, urging that prompt and favorable action be taken with regard to the proposed additions to the Forest Reserve recommended by the Forestry Branch.

#### B. C. Industry Has Great Future

Speaking before the Business Club in Vancouver, H. R. MacMillan, head forester for the provincial government, gave many statistics regarding the timber industry of British Columbia. He discussed at some length the great benefit of the fire protective service, and stated that if this were as successful as planned it would insure one of the largest industries to this Province, since there are only three places which have so much virgin timber. Only one-fifth of the annual growth is now cut, and only one-third of the trees are marketed. He thought that instead of there being only 300 sawmills there should be 3,000, if markets were made accessible and fire protection is adequate.

T. F. Paterson, a practical millman, who followed, was not quite so optimistic as Mr. MacMillan; still he called the industry one of the greatest in the Province and one capable of development. He declared that the charges of the Government for timberland were abnormally high. The cut in 1912 he placed at 1,500,000,000 feet and said that would be exceeded. Mr. Paterson thought it was the Government's duty to find out what can be done toward securing by-products from the woods grown in the Province.

The annual meeting of the National Hardwood Lumber Association will be held at Chicago on June 5th and 6th, with the Hotel Sherman as headquarters. The total amount of lumber inspected under bonded certificates by the association during 1912 was 171,823,339 feet, an increase of 44,462,891 feet over the previous year.

#### An Imported Veneer Door

The accompanying picture is a reproduction of a photograph of a section of a door recently imported into Canada from the United States. It is made of sugar pine, with birch veneer panels. The

An example of an Imported Veneer Door

veneer, as is clearly shown, has come away from the core and warped badly. Canadian door manufacturers are fighting foreign competition vigorously and claim that many of the imported doors are of this class.

#### Quebec Firms Not Worried

J. N. Greenshields, of the Wayagamack Pulp & Paper Company, in a recent interview stated that the company was not at all worried by the action of the United States in refusing to admit pulp and paper free from Quebec Crown lands wood from which the export restriction had been removed. "We confidently expect the Democrats to put paper on the free list, he said, but even if they do not, our company is so situated that it can obtain sufficient free wood. We have enough on hand to do us for a year and when that is done we can buy more."

#### Harvard Forestry Course

The Official Register of the Harvard University School of Forestry for 1913, which has recently been distributed, shows that an exceptional amount of time is devoted to work done in residence in the Harvard Forest at Petersham, Mass., where an annual logging and milling operation is carried on by the school, and where forest problems of nearly every type, both technical and administrative, are presented. Half the total length of the course is spent in the Harvard Forest, and more than half in the woods. The course begins in July at Petersham.

The Smart Turner Machine Company, Limited, Hamilton, Ont., are supplying The Howard Smith Paper Mills, Limited, Beauharnois, Que., with three centrifugal pumps.

# Retail Ramblings

Lessons From Experience  
Briefly Told By One Who  
Thinks While He Works

## A Plan Which Brought Business

Writers upon the retail lumber trade and its problems have discussed from time to time practically everything in the way of concrete problems that come up during the daily routine of the retailer's business. After all however, most of these problems are different phases to the one big problem, viz., how to increase business.

In a western city well known to the lumber travelling public a retailer is carrying on a business which has been growing of late months in a remarkable manner. Whether this man has discovered the key to success or not is hard to say, but he has certainly developed a little plan of his own which is responsible for practically all of the growth which has taken place in his business of late.

Thinking things over one day when business was quiet, he got into an analytical frame of mind and took a view of the situation from the consumer's standpoint. It struck him very soon that a great many more people would build cottages, garages and small stables or sheds, if they could only know beforehand how much they would cost. There was apparently no way for such prospective customers to find out in advance how big the lumber bill would be when it was presented. After a little consideration this retailer hit upon the plan of consulting an architect and a builder and having two sample plans drawn up as a starter. One was a plan of a small barn, the other a three-room cottage with porch. This was known to the trade as a knock-down house. With these plans the retailer got hold of one of his carpenters and had him get out the lumber for every piece of the building. Each piece was numbered in such a way that anyone would be able to put the house together. Everything was supplied except the hammer. All nails, paint, hardware, roofing, doors and windows were furnished complete, and a blue print showed where each numbered piece should go, making the work of erection simple and interesting.

Having gone this far the retailer carried his plans still further by building a sample house and shed which were plainly marked with the price to cover the whole thing complete. These were put on a lot where they were sure to attract the attention of passers-by. The scheme worked satisfactorily from the very beginning and soon paid for itself, after which it was a continual source of profit to the retailer. There is very little limit to a scheme of this sort. An energetic retailer having made a good start in this manner could get out plans for more pretentious buildings in the same manner. The key to the whole situation is the fact that plans of this nature inform the customer beforehand, just how much money he will have to put up, when the building is completed. In a country where many new settlers are coming in, this sort of business ought to prove surprisingly successful.

## Good Piling Sells Stocks

There are a good many other ways of increasing business, as probably every retailer knows, but they all depend upon the man at the head of affairs. Much more than some retailers imagine depends upon the manner in which stocks are piled in the yards. The well arranged yard with attractive stocks greeting the prospective customers at every turn is a certain business getter. This matter of piling stocks is one which might be driven home to the manufacturer of lumber a little more forcibly than it has in the past. Of course there are many manufacturers who pile in a manner which attracts trade regularly. There are others however, who do not pay sufficient attention to this point. Talking with a retailer recently this subject came up and the retailer said:—"If manufacturers would give more attention to piling their short shorts (2 to 5 feet) they could find a ready market and better prices with the box makers. The average box factory owner cannot afford to pick over 2 to 5 foot stocks when he wants to make a box 3 feet long, he would gladly buy this stock if each length came separately." The writer knows of a mill where stocks are piled in this manner and the owner of that mill finds that the plan pays well. Sorting to length is done with a carrier and each length drops automatically into its proper car.

Piling lengths separately reminds one of the discussion which is heard in practically every lumber office to-day about the importance of having some definite standard of grading. A prominent manufacturer who also happens to be a consumer of lumber in a city of western Ontario was talking about standard grades the other day and remarked that he preferred to buy his lumber in the southern States, because lumbermen in the south were always ready to give him just as much lumber of a certain length or grade as he required. Canadian manufacturers would do nothing of the sort. Either they would not try or they could not give the retailer what he wanted. The Cana-

dian manufacturers would insist upon their customers taking the lumber according to their own system of piling and grading. Some who have dealt with southern mills are therefore inclined to send their trade in that direction whenever possible.

The blame for this is not entirely to be attached to the Canadian manufacturer of lumber. Canadian mills are obliged to get out their logs a year in advance of the time when the stock will be sold and they cannot figure to a nicety on the class of stocks that will be in demand a year hence. On the other hand the southern lumberman who brings in his logs, for an order, operates in most cases the year round. He can send an order to the woods for logs of certain lengths, rail them into the mill, cut them into lumber, put them through the dry kiln and have the stock loaded on the cars in some cases within two weeks after the order has been received. Canadian manufacturers would be just as ready to get their stocks out in the same manner if it were possible to do so, but the climatic conditions make this an impossibility.

## A Few of The Retailer's Troubles

Retailers have had a good many things to think of in Ontario recently and most of their thoughts have been connected with the cost and difficulty of securing stocks. Prices have gone up during the past year and the cost of handling stocks has also increased. On top of this has come, of late, the increased demurrage charges which the Dominion Board of Railway Commissioners has permitted the railway companies to impose upon the trade. Already the effect of this increased charge is making itself felt. A wholesaler in Toronto discussing the effect of the increased charges said that he believed it would help out the millmen and large wholesale firms, by forcing the "wild cat" broker and scalper out of business. With the present increased cost of demurrage it would be practically impossible for this class of men to hold stock on the track until they could find a customer.

A lumber traveller who recently made a trip through Ontario sends in the following ideas gathered during his journeying:—

"There seems to be a growing tendency for certain travellers who are unable to sell to the trade, and at the same time make a living, to sell directly to the large contractors. This sort of thing cannot be carried on very long but it does a great deal of harm. Among those who suffer most is the wholesaler himself. By dealing in this manner he spoils his chances for future business with retail men and incurs the enmity of other wholesalers and millmen.

"Why is it that retail yard men will not stiffen up their prices, when they know that they will have to pay more for stock to replace that which they are now selling too low? Because they bought cheaply and the market then went up, is no reason why they should continue to sell at the old price. They should ask for more. Mill men and wholesalers do not wait long to tack on 50 cents per thousand when they are getting low on a certain line of stock. My advice to retailers is to try this plan. Do not mind if Bill Jones down the street is selling at the same old price. You will be getting your price when Bill is out of stock and waiting for the higher priced car to come in.

"An old hotel man told me last week that the modern lumber traveller was not much like his predecessor of twelve or fifteen years ago. The old boys knew everyone by their first names and most of the business was done at the mahogany top between drinks and stories. The new man rarely take a drink, has very little to say to anyone, gets through his business and gets away to the next town at the earliest possible moment. No sitting up at night and playing cards for him. The average wide-awake lumber salesman looks with suspicion on the business man who has time to drink in the day time. He is doubtful about his being a good risk and, as he does not want any bad debts to show up against him at the end of the year, he goes warily with that kind of man. A well-known salesman told me the other day that during last year he only bought a drink for one man, after which he sold him a couple of cars. Not liking the looks of things or the man's ways he cancelled the order next day. His judgment was justified for the man failed inside of three months."

## Two Kinds of Travellers

A prominent wholesaler in Toronto discussing this matter instanced two well-known travellers representing some of the largest manufacturers of lumber in Canada. One of these travellers never came in the office without taking off his hat and coat, settling himself comfortably in a chair and spending the rest of the forenoon and afternoon in the office, talking about all sorts of things from politics to

planks. He generally got an order because the wholesaler gave it to him as a last hope thinking that then he would go away and allow the office to go on with its business. This traveller is apparently one of the old school, who has lots of time to spare and he does not seem to care about the importance of his customer's time. A curious thing is that he manages to put through a large amount of business. There is scarcely any question however, that if he confined himself to strict business methods he would probably put through twice as much. The other traveller is a man who seems to think that his own time is as valuable as anyone else's. He comes to the point at once, and asks the wholesaler whether he has any time to spare to talk business. If the answer is in the negative he says good morning and hunts up another customer. If the wholesaler wants to talk business, this traveller does so in a businesslike manner, wastes no one's time and goes out gunning for another order as soon as he can.

### Side Lines for the Retail Lumber Dealer

Any discussion of "side lines," it seems to me, must be preceded by a survey of the main line in order to get a knowledge of what should be placed in the list of staples that all lumbermen handle, says E. D. Whiteside in the American Lumberman. Having been trained to think that almost all building materials belonged in the lumberman's list of staples, I have noted the way that many dealers have given up first one and then another item of stock until they are reduced to the items covered by the stereotyped lumber advertisement, "Lumber, Lath, Shingles, Sash and Doors."

The lumber dealer has allowed other business lines to encroach upon him until he has little left but boards to sell. This encroachment comes in part from his neighbors, the hardware dealer being the most aggressive, though the furniture dealer and druggist are close seconds. Each year, also, the mail order wolf pack comes closer and grows bolder. If he does not want to have the last bone taken from him he must fight to hold all he has and endeavor to regain what he has lost.

Starting with the articles listed above, as the staples that are as yet conceded to be in the line of the lumber dealer, I should add as the first side line, coal. I have found it a good profit producer in territory where coal and other fuel must be shipped in. In the territory from which I write, where every farmer has 4 feet of coal under his fields, there is, of course, no sale from dealers. I found in talking with dealers at the recent lumbermen's convention that many of them have given up the sale of coal even in territory where it is a staple seller. One man said that he had stopped selling it because he did not want to sell anything for which he could not file a lien to secure the payment. This was a new view of the matter to me, and I can hardly think it the real reason for his discontinuing the sale. Selling it for cash would overcome that objection.

Next in the matter of importance, in both volume of sales and profits should come cement, the sale of which is growing faster than the sale of any other item in the average yard stock. The yard that sold 100 barrels of Portland cement six years ago should sell 2,000 or more this year. It is probable that the increase will not be nearly as rapid in the future as in the past few years, but no one knows to what extent the sale will grow. The added sale of cement means a lessened sale of lumber, an added reason for the lumberman to strive to control the sale in order to keep his business up to the present returns should be a trifle better.

Plaster should be the next on the list to be added to the line. While the increase in sales has not been as rapid as that of cement, the volume of business should not be far different, and the net per cent. returns should be a trifle better.

Not perhaps the next in importance but placed next in order because of its near relation to the two foregoing, I should list lime, all kinds—lump, hydrated and fertilizer. The latter is as good on a worn debilitated farm as the commercial fertilizers that sell for four times the price it can be sold for. By the way, the commercial fertilizers can be added to your list very nicely if you have a warehouse on the railroad right of way.

Then paint—house paint, barn paint, dry paints, mortar colors, colors in oil, varnishes, brushes—a full assortment of a complete line. Keep as near to one make and one brand as you can, and be sure that it passes unscathed through all the tests imposed under any of the pure paint laws. You want the line to strengthen and uphold the entire business; don't get any kind of adulterated "dope" that will condemn all other goods that you sell. And keep it on shelves neatly stored and cared for, so that you will not have to look behind the door or under some remnants of roofing to find a gallon of "Pea-Green No. 387" when you have a customer. The lumberman has the advance information in all cases of new buildings, and if he has on hand a complete stock should have the best chance to sell the paint. He must have a complete stock, though, and be prepared to furnish all of the material for the job, inside and out, whether a lead and oil one or ready mixed. On an average investment of \$600 the country lum-

ber yard should sell 1,000 gallons of paint each year at a profit of \$300 to \$400, owing somewhat to the quantity of painters' sundries sold. It must be a good paint, though, and the salesman must know it is good.

Prepared roofings—In this line you will meet with more opposition from your local hardware and other dealers than perhaps in any other. The same is true, probably, in reference to mail order opposition. That need not mean that you can not sell the goods to advantage to your profit and loss account. There has been almost as rapid an increase in the sale of this class of cement, and the increased sale has meant the lessening of the sale of shingles. The loss of the sale of shingles is not so bad if you sell the roofing instead. Include with the roofing a stock of building paper and the necessary roof coatings.

Many lumbermen have abandoned the sale of screens for the reason that they have been unable to supply the wants of the customers in the way of screen wire door fixtures. Why not stock them? Would they not fit into your stock as well as the screen doors do into the hardware dealer's stock? You sell the house bill. You can refer to your records to get the list of sizes your customer wants and are in better position to supply his wants than any one else.

Brick, tile and sewer pipe fit into the line nicely in many localities. In many cases there are manufacturing plants that take care of the local demand. Where the trade must be supplied by shipping in the material, the lumber yard is the proper place for its sale. None of them needs a shed or any protection from the weather and the expense of handling is reduced to the minimum.

I have found ladders a good seller at fair profit. A good stock of all sizes, including step and painter's ladders, can be carried at an average of less than \$100 invested. I have known a stock averaging half that amount to show a yearly sale of \$150 and a net profit of \$30 or 60 per cent. on the investment.

You can sell grates and mantels, too, even if you do not feel that you have the room to carry them in stock. You have a little better chance at the business than any other dealer. They are usually sold "from pictures" in the average country yard. Why not get the business?

Know the goods and prices listed in the catalogs of the sash and door factories of which you buy, and be prepared to sell any and all of them.

Do not try, however, to handle any side line and allow it to get so far to one side that you will forget it. As stated before, the lumberman has the first chance at the customer who wants any of the articles listed in the foregoing catalog of "side lines," and if he is a salesman and remembers it all the time, he can make the sale.

Keep a tabulated account of results and know just what each line is doing. I know dealers who are making each of the articles mentioned pay a better per cent. of profit than "lumber, lath, shingles, etc." There are others that may be added in some localities, but the ones given can be sold, barring the exceptions suggested, in any locality.

In noting the stocks that the average lumber yard includes, one would be led to believe that the owner had been reading the newspaper accounts of the rapidity with which the forests are being depleted until he had reached the conclusion that he would have, at the best, but a year or two more of business life and wanted to clear up all items of the stock and be ready to quit.

Why, bless you, someone will be selling lumber long after this now being used has crumbled to dust. But when we find some material such as cement or brick encroaching upon our sales of boards, let's gather them in and sell them as well as boards. If building material is turning to steel, sell steel.

And at all times remember that you are selling articles of known intrinsic worth that when used on farm or city lot go to enhance its value. Remember that your sales are to the solid, established citizens of the community and not to the human flotsam and jetsam cast here and there by every wave of shifting circumstance. Remember that the goods you sell go to increase the buyers wealth and comfort more than your own, and knowing a fair value, ask a fair price.

### Object to St. John River Dam

The International St. John River Commission held several sittings recently at St. John, N.B. hearing evidence in regard to the proposed erection of a dam by the St. John River Hydro-Electric Company, at a point about 40 miles above Fredericton. A number of interests were heard, including the St. John River Log Driving Association and representatives of manufacturing companies. Those interested in fisheries were also present to object to the construction of the dam. At the latest reports the commission had not completed the hearing of the evidence.

The 21st annual meeting of the National Wholesale Lumber Dealers' Association will be held at Atlantic City, N.J., on Thursday and Friday, March 6th and 7th, with headquarters at the Hotel Chelsea.

# Machinery and Equipment

What Manufacturers of Logging, Sawmill and Woodworking Appliances are Doing

## Defiance Iron Frame Drag Saw

The Defiance Machine Works, Defiance, Ohio, U.S.A., have issued an interesting illustrated description of their No. 2 Iron Frame Drag Sawing Machine. This machine is designed especially for cutting off logs from the smallest sizes up to 48 in. diameter, either soft or hardwood, to any lengths required. It is a most practical machine for the manufacturers of hubs, spokes, handles, shafts, poles, neck-yokes, single-trees, rims, hoops, staves, heading and similar products, who purchase their material in the log. For heavy work this type of machine is the most economical that can be employed.

The frame is of neat design, mounted upon a substantial base to insure rigidity and strength to avoid all tendency to spring or get out of alignment.

The driving power is placed between two substantial bearings and is of the cross-head type, mounted upon ground steel shafts 1 11-16 in. diameter. The balance wheel forms the crank to which the connecting rod is attached and is fitted to a steel shaft 1 15-16 in. diameter running in self-oiling babbit metal bearings which also supports the tight and loose pulleys.

The saw is 5 ft. 6 ins. long by 10 ins. wide with teeth to cut both ways and has a stroke of 26 ins. It is fitted to the arm between two heavy steel plates so arranged that it can be quickly connected or disconnected. By the use of a convenient hand lever, the saw, while in motion, can be raised to clear the log or to its extreme height and locked in position to enable the operator to feed the log forward for the next cut. A suitable dog is furnished to hold the log from turning when the cut is being made. An eye bolt is supplied to which a cable can be attached for counter balancing the arm which supports the saw, thus relieving the operator of any unnecessary labor in lifting the saw from the cut.

The log carriage and feeding device are mounted upon a pair of cast iron tracks 114 ins. in length. The ratchet lever used for moving the log is connected to a heavy steel shaft to which are fitted two taper spur wheels upon which the log rests and they can be moved forward or backward by reversing the ratchet dog for the purpose of gauging the length of material to be cut. Additional lengths of track can be furnished at an extra price in order to extend same into the log yard and the carriage can be used for handling the logs to the machine. By this arrangement only one handling of the log is necessary.

The tight and loose pulleys are 36 ins. in diameter x 6 1/4 ins. face and should run 80 revolutions per minute. The loose pulley is fitted with phosphor bronze rings which makes a most durable and satisfactory bearing.

Further particulars and price of this labor-saving machine will be furnished upon application to The Defiance Machine Works, Defiance, Ohio, U.S.A.

## Leather Goods for Lumbermen

A. R. Clarke & Company, Limited, wholesale leather goods manufacturers were established in Toronto in 1852 and since that time have made for themselves a marked name in their particular line of business.

This company own a very large factory which stands on their own grounds of over twelve acres and has been built on the most up-to-date plan to afford every facility for receiving, handling and shipping their goods. The factory is also well served as regards railroad facilities. Messrs. Clarke Company, Limited, manufacture all their own leather, and this intricate work is supervised by experts. The up-to-date chrome process is used almost exclusively. The old bark tan leather not making such good wearing material.

In the finishing room the leather is all finished for the department for which it is intended, for example, cow hides and colt skins are used for enamel leather; horsehides, buckskin, pigskin and all kinds of sheep skins are used in the manufacture of gloves and mitts. Elk skin and bull-hides are used for moccasins and shearlings for coat linings. To watch the various processes through which these skins have to pass is an interesting and instructive study.

In the glove factory gloves, mitts and gauntlets are cut and put in dozens waiting to be sewn together and made into the finished article.

A. R. Clarke & Company, Limited, are said to be the largest makers of patent leather in the British Empire, and in their enamel department more than sixty per cent. of the patent leather used in Canada is manufactured.

Owing to their largely increasing business the company have been obliged to make additions to their building and a structure is under way which will add 20,000 square feet to their already large factory. When the building now being erected is completed the factory will occupy over 200,000 square feet in floor space.

The products manufactured by A. R. Clarke & Company, Limited, include a number which are well known to lumbermen. One of the most popular is their special sheep lined coat made expressly for lumbermen. This coat has a 7-inch Wombat collar, 8-oz. duck-shell leather armshields, reinforced pockets, knit wool wrist, etc. The company also make a complete line of gloves, mitts, moccasins, wanigans, larrigans, Mackinaw coats, pants, socks, blankets, underwear, caps, etc.

A handy office calendar has been sent by the Naugle Pole and Tie Company, Chicago, to their friends. A number of reproductions of photographs are shown on the calendar giving a good idea of the magnitude of their yards and the various operations which the poles and ties go through.

No. 2 Iron Frame Drag Sawing Machine—Defiance Machine Works

### Rogers Knife Grinder

For over thirty years the firm of Samuel C. Rogers & Company, Buffalo, N.Y., has been known to the woodworking trade in all parts of the world. During that time they have devoted all their efforts to the manufacturing of automatic knife and saw fitting machinery. During 1912 the export sales of the company were three times greater than those of 1911. The greatest call from this concern seemed to be for the type "F" Full Automatic Feed Knife Grinder, a cut of which is shown herein. This grinder is made in five different sizes to meet the requirements of the trade. For planer knife grinding this machine has won considerable praise. It is well designed and very rigid. This machine is also adapted to the grinding of hog, chipper and paper knives of the smaller sizes within the capacities of the machine. The gearing, which acts in the reversing carriage, is protected by springs which act as cushions and eliminate the jerks when the carriage is reversed by a belt shifter. This is the case with a great many machines and this very important feature is one of the secrets of the wearing quality of the Rogers-Buffalo knife grinders.

Their other two types "B" and "G" machines are of much heavier design, in fact type "B" machine is built in sizes to accommodate knives from the smallest to 130 in. in length and is one of the best veneer knife grinders upon the market. Type "G" machine is somewhat lighter and will accommodate knives from the smallest to 72

Type "F" Full Automatic Feed Knife Grinder

in. in length and is a great favorite with the printing trade where all kinds of paper knives have to be sharpened and a true, keen edge must be the result.

Their band and circular saw sharpeners are built with the same merits as their knife grinders. They have been built to take the place of the human hand and they are doing it in a most satisfactory way. Their circular saw sharpeners are so arranged that once a saw is put in proper condition by the use of same it is always perfectly round and the teeth are uniform as to shape and size. Saws sharpened upon the Rogers-Buffalo machine run smoothly and cut clean and make it a pleasure for an operator to run them. What is more dangerous in a mill than saws that are in poor condition and constantly kick the lumber back at the operator, in many instances injuring him to a great extent? A Rogers-Buffalo machine will eliminate all these dangers as the saws will cut a clean kerf and wait for more work.

In their band saw sharpeners they still retain the oscillating movement of the emery wheel supported by an arm. This gives a very uniform tension and the emery wheel is forced into the thread of the tooth in an even, light manner.

Full particulars concerning this grinder can be had by writing to the company at the above address.

### The Dangers of Logging Slash

The Forestry Branch of the Department of the Interior called a meeting of the fire-rangers of the Revelstoke district of the Railway Belt recently, to discuss more efficient forest fire protection.

This conference decided that there can be no certain hope of conserving forest resources till the slash, left after logging operations, is disposed of.

The experience of rangers shows that once a fire gets a start in slash an army of men cannot check it. A fire at Golden, B.C., last June, was quoted as an example. This fire started in slash where logging operations were being carried on. Fanned by a strong wind, it obtained such headway that a large force of men employed by the lumber company, who were right on the ground, had to flee for their lives. This fire raged up and down the Columbia River for miles, destroying many million feet of timber, and burning up log-

ging camps and a logging railway. A large force of fire fighters proved helpless to stop its ravages.

The conference asserted that this slash problem is becoming more insistent and dangerous every year, as the quantity of slash is increased by lumbering operations.

Much satisfaction was expressed by the Conference at a statement made by the forest inspector, acting as chairman of the meeting, that the Forestry Branch was to institute experiments as soon as possible to determine the safest and most economical method of disposing of logging slash.

The United States Consular and Trade reports referring to the district of Acapulco, Mexico, referring to the timber resources report as follows: "Although vast areas of the finest merchantable timber, different varieties of oak and pine, extend throughout the entire range of the Sierra Madre Mountains, interspersed with hardwood of rare and valuable varieties, the lack of transportation facilities has so far rendered these resources inaccessible."

### A Good Shavings Press

The accompanying illustration gives an excellent idea of the "American Steam Steel Frame Press," manufactured by the American Engine & Boiler Works, Tonawanda, N.Y. This press should prove of much interest to all who have shavings for sale. The press has a 30 in. diameter cylinder which is 45 in. high and has a capacity of one bale of shavings per minute. The steam or air pressure varies from 60 to 100 lbs. according to the quantity which it is wished to put into a bale. The frame is made of steel, rivetted and bolted together so as to prevent anything from getting out of order.

The standard size of bale made is 20 in. by 20 in. by 28 in., but can be reduced by putting lining on the inside of the press or increased by building the press larger if desired.

Most users have a swinging box or hopper that will hold enough to fill the press. This swings on bolts from above press. It is made to swing in between the two angle irons on the front of the press and to hang clear of the top door when not in use. These boxes are mostly made of wood, but could be made of sheet steel.

The platform for bottom of hopper is stationary, as close to the hopper as it will clear in swinging to fill the press when it swings back on the platform. No shavings can drop out, only into press. The platform is built close to the press and on the radius that the hopper swings.

Shavings are generally blown in at the top of building. Care must be taken not to build the hopper so that it will clog. It should have very

American Steam Steel Frame Press.

little taper. There should be a canvas fastened from the top of the hopper to the large bend above, so that by swinging the hopper the shavings won't get through the opening. Many mills shovel the shavings into the press, but the hopper is the quickest and cleanest way.

The press has one 2½ in. quick opening valve for relief or exhaust and one 1½ in. quick opening valve for feed, and one 1 in. valve on top and one 1 in. valve on the lowest point at the bottom to drain the cylinder in cold weather. The weight of the machine is 6,100 lbs.

### "A Handsome Book"

Every one who is interested in a triple drum sander may secure a copy of a very artistic and comprehensive book just issued on the subject by the American Wood Working Machinery Company, Rochester, N.Y. The title of this book is "Columbia Sander No. 2". It illustrates and describes very effectively the manufacturers' latest production in the way of a triple drum sander.

J. E. Hedderley, of Winnipeg, general manager for the western division of T. A. Burrows' lumber enterprises, was in Edmonton recently looking over the building situation, which, he says, gives every promise of being the most active in the history of the city. Mr. Hedderley's district extends from Dauphin, Man., to the head of steel on the transcontinental railroads in eastern British Columbia.

# WANTED & FOR SALE DEPARTMENT

## PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (\$2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

## Wanted—Lumber

### Wanted

Three thousand feet of good Canadian Oak, all cut 4/4 in. Shipment any time within ten months. Address Box 693, Canada Lumberman, Toronto, Ont. 3-6

### Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Box Co., Ltd., Toronto, Ont. 7-11

### Wanted

500,000 ft. Maple squares 1 1/4-in., 1 1/2-in., 1 3/4-in., 2-in., 2 1/4-in. and 2 1/2-in. Any length from 12-in. up.

Car lots and upwards.  
M. Mitchell, P. O. Box 204, Lucknow, Ont. 2-5

### Wanted

Cedar Posts, cut from green timber, 8 and 9 feet long, in car load lots, peeled or unpeeled, any quantity. Apply stating size and quantity to Box 688, Canada Lumberman, Toronto, Ont. 3-7

We use yearly five hundred thousand to one million feet of Birch, Basswood and Ash in our business and are open to contract with responsible mill men for same. We would be willing to advance money on the logs and also on lumber as sawn. Write us, Manufacturer, Box 619, Canada Lumberman, Toronto, Ont. 20-37 T.F.

WANTED—One million feet inch cull hardwood; shipment during spring and summer. State how much you can supply. Parry Sound Lumber Company, Toronto. 5

### Cull Maple, Beech, Birch

100 cars 1-in. Mill Cull Maple, Beech or Birch. Highest cash prices paid for entire output of mill in Hardwood, Pine or Hemlock. Great Lakes Lumber Co., Ltd., Owen Sound, Ont. 5-T.F.

### Birch Wanted

Want 200 M. ft. 10/4 1st and 2nds and No. 1 Common Birch. Give average widths and lengths and percentage of 14 and 16 ft. lengths. Want price delivered Philadelphia, Pa. and New York City.

Want 200 M. ft. 6/4 No. 1 Common Birch delivered Boston, Mass.

Want 5 cars 4 1/2 in. and 5 in. 1sts and 2nds. Birch delivered New York City and Philadelphia, Pa. Reply Box 526 Canada Lumberman, Toronto, Ont. 14 T.F.

### Hardwood Pickets Wanted

Beech, Birch and Hard Maple.

1 x 1 x 42.

1 x 1 x 48.

1 x 1 1/2 x 42.

1 x 1 1/2 x 48.

1 x 1 3/4 x 42.

1 x 1 3/4 x 48.

Require Thickness, 1/16-in. Plump.

Quality—Free from all defects.

Can take delivery of green or dry stock.

Apply to The Canada Wood Specialty Co., Ltd., Orillia, for full particulars, price, etc. 24-1-TF

## Wanted

One-inch cull elm, deads out and dry. Write P. O. Box 892, Smiths Falls, Ont. 5-8

## LUMBER

When you have any kind of lumber and lath to offer or logs for sale, send us a description and prices. The Turner Lumber Company, Limited, 25 Toronto Street, Toronto. 4-7

### Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

## Wanted

We want 1,000,000 ft. 16/4 Birch, No. 1 Common and better.

250,000 ft. 10/4 Birch, No. 1 Com. & Bet. For delivery during 1913. State whether lumber is band sawed or circular sawed, percentage of 14 and 16 ft. lengths, whether it is a narrow, medium or wide run, what percentage is No. 1 Common and your best spot cash prices. We are in the market for all kinds of Hardwood lumber for spot cash. Box 690, Canada Lumberman, Toronto, Ont. 3-6

## For Sale—Lumber

### For Sale

Three cars 5/8-in. Spruce, clear; cut 1911. Edouard Ruel, Lauzon, Que. 5

FOR SALE.—One Hundred Million Choice British Columbia Timber. Cheap. No cash required. Terms over ten years. Excellent lumbering chance. Wire for particulars. John Sanders, 964 Seventh Ave. West, Vancouver. 2-5

### Lumber For Sale

400,000 ft. 3 x 7 and up Merchantable White Pine.

200,000 ft. 2 in. Merchantable White Pine.

200,000 ft. 1 1/4 in. Basswood, Log Run.

500,000 ft. Hard Maple, 1 in. to 4 in.

Apply to  
GEO. C. GOODFELLOW,  
Montreal, Que. C

### Hardwood Bush For Sale

600 acres, 5 miles to siding. Est. 3,000,000 feet. Price, \$8,000.

375 acres, 1 1/2 miles to siding. Est. 2,300,000 feet. Price \$6,000.

640 acres, 4 miles to siding. Est. 3,200,000 feet. Price, \$8,800.

1200 acres, 1 1/2 miles to siding. Est. 5,200,000 feet. Price, \$14,000.

Apply Box 717, Canada Lumberman, Toronto, Ont. 5-6

## Pine Logs or Lumber For Sale

We offer for sale approximately thirteen million feet of Pine Logs, Government Scale. Timber logged from the Townships of Mc-Kingir, Parry Sound District. Situated on the Magnetawan River, for very early delivery. Can be driven to Bying Inlet in about three weeks time after drive starts.

Will sell logs delivered Bying Inlet in one or more lots, or will sell a part loaded on cars C. N. O. Ry. at South Maganetawan, Ont., or will sell the product at mill on Georgian Bay.

90% White Pine, balance mainly Red Pine

White Pine 48% of scale 15" diameter and over

White Pine 75% of scale 12" diameter and over

White Pine 89% of scale 10" diameter and over

White Pine 85% 16 feet lengths

Buyers will be given prices and shown the logs by Mr. R. G. Flanders, manager, who may be reached by letter to Whitestone, Ont., or by telegraph to Deerhaha Station, Ont., C. N. O. Ry.

Further particulars given to prospective buyers.

HOLT LUMBER COMPANY, LTD.,  
926 Manhattan Building, Chicago, Ill.  
Or, Whitestone, Ont., Canada.

## For Sale

About 23,000 ft. of Oak Corbels, 6-in. x 10-in., 8-in. x 14-in. and 8-in. x 16-in., 12/16 ft. long; square edge and sound timbers. Massey Harris Company, Limited, Toronto, Ont. 1-6

## For Sale—Machinery

### For Sale

Iron work for Bolting Saw, all new. Address Box 705, Canada Lumberman, Toronto, Ont. 4-5

### Steam Engine and Matcher

One Morgan Box Board Matcher in good condition, \$225.00. One only Erie Side Valve 20 H.P. Steam Engine, used only a short time, price \$150.00. S. & H. Bordridge, Ottawa, Ont. 3-6

### Saw Mill For Sale

Huntsville Lumber Company, Limited, will in the future only run one of their two double cutting Band Mills, which is now cutting fifty thousand feet per day.

They will sell the same with engine, boilers and all other machinery along with building. Also will sell blacksmith's tools and a number of saw-log sleighs and chains.

Huntsville Lumber Company, Ltd.,  
22-42 T.F. Huntsville, Ont.

## Bargain in Surfacers and Matcher

For Sale, one first class Surfacers and Matcher, "Cowan," three cylinders, boring attachment, has been in use for five years only, does first class work either in soft or hard woods. The machine is actually in operation and can be seen at any time of the week. Would sell it cheap, nice opportunity for the man who wants a good machine at cut price. For further particulars, apply to T. Prefontaine & Co., Corner Charlevoix & St. Patrick, Montreal, P.O. Box 2097. 4-5

### Mill For Sale

We have for sale a mill composed of the following machinery:

- 1 Band Mill, 8-ft. Wheel.
- 1 20-ft. Log Carriage, 3 48-in. Blocks.
- 1 Steam Feed, Steam Nigger, Steam Log Loader.
- 1 Upright Band Resaw.
- 1 Horizontal Slab Resaw, 60-in. x 8-in. wheel.
- 1 6 Saw Murray Edger.
- 1 9 Saw Automatic Trimmer.
- 1 5 Saw Slab Slasher.
- 1 Refuse Burner.
- 1 Lath Machine.
- 1 Lath Bolter.

Filing Room Machinery and other Machinery necessary for complete Saw Mill.

Write for complete inventory. Will be sold cheap.

BAYFIELD MILL CO., Bayfield, Wisc. 2-5

## Wanted—Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

WANTED—Position as saw mill foreman or manager by an experienced, sober, and reliable man. Box 709, Canada Lumberman, Toronto, Ont. 4-7

A practical sawmill man wants situation in charge, either building or operating, or would contract season's cut, 25 years experience. Address Millwright, 234 Liverpool Street, Montreal, P.Q. 4-5

Double cut band or circular sawyer open for engagement coming season. Best of references. J. Mercer, Parry Sound, Ont. 4-9

Position wanted by first-class band saw filer, double or single cut. Fifteen years experience. Gilt edge references. Box 708, Canada Lumberman, Toronto, Ont. 4-7

As band saw filer, double or single cut, or in a factory where there are band resaws. All references. Box 715, Canada Lumberman, Toronto, Ont. 5-7

Band Filer's Helper wants position in a good mill; good references. Reply, stating wages, etc., Box 714, Canada Lumberman, Toronto, Ont. 5-7

## Wanted

By well-known lumber traveller, with good connection Western Ontario, stock of lumber to sell. Pine, Hemlock and Hardwoods on commission. Box 724, Canada Lumberman, Toronto, Ont. 5

Position wanted with good lumber firm, Toronto, preferred, where advancement is assured to reliable man experienced in woods operations as scaler (Cullers License), clerk, foreman, and supplies manager. In mill as yard manager, grading and shipping (chiefly birch, spruce and hemlock), office work, retail and car sales. Good credentials and connection. Apply Box 722, Canada Lumberman, Toronto, Ont. 5-6

## Wanted—Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents

WANTED—A first-class general machine hand for planing mill. Apply to Allan S. Nicholson & Co., Burlington, Ont. 5-7

WANTED—First-class lumber salesman. State salary expected, experience and age. Apply Box 678, Canada Lumberman, Toronto, Ont. 2-5

WANTED—An experienced shipper who knows grades of white pine, hemlock and hardwood. Apply Box 710, Canada Lumberman, Toronto, Ont. 4-7

WANTED—Two Band Saw Setters, two Edgermen; two Trimmermen. Must be first-class experienced men. Mill starts in April. Prince Albert Lumber Company, Limited, Prince Albert, Sask. 3-5

WANTED—Shop Superintendent for modern woodworking plant, must be good figurer and experienced in manufacture of sash, doors and general mill work. Apply Merkley Bros., Ltd., Casselman, Ont. 4-5

WANTED—Two dry lumber cullers, experienced in shipping and grading lumber on the pile, in the Ottawa Valley; must be sober. Good wages. Apply Box 719, Canada Lumberman, Toronto, Ont. 5

New Pulp and Paper Mill, using about 60,000 cords of wood per year, require the services of a first-class man to take charge of their lumbering operations. State wages required references, etc., Abitibi Pulp & Paper Co., Ltd., Iroquois Falls, Ont. 3-5

WANTED at once, competent, experienced hardwood lumber shipper for road work. Must be strictly temperate and a pusher. Do not apply unless you know grades accurately. Manufacturers Lumber Company, Ltd., Stratford, Ont. 4-5

WANTED—Foreman to take charge of wood room for Sulphite Mill. Steady position, good wages for right man. Only first-class men need apply. State reference, experience and age, B-28, care Canada Lumberman, Toronto, Ont. 5-6

## Business Chances

### For Sale

Must be sold—\$2000 off—planing, saw and chop mill. Full particulars apply to John McCormich, Lawrence Station, Ont. 3-8

### For Sale

Saw Mill and fifty-three miles timber limits in County of Bonaventure, Quebec Province. For further particulars apply to J. D. Sowerby & Co., Oak Bay Mills, P.Q. 22-71tf

### Sawmill For Sale

If you want a snap and are open for business in the above line with large or small capital, write Box 200, Warren, Ont., for particulars. 4-5

### Wanted

A party with a portable saw mill to saw about half million feet of saw logs, or we might buy a portable saw mill ourselves. For particulars address Geo. Neibergall & Son, Parry Sound, Ont. 4-7

### Timber Limits For Sale

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest, if your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. 4-7

### Wanted — To Buy a Good Timber Tract

Of White and Norway Pine, Hemlock and Spruce. Would consider buying first-class running operation. In replying, give full details of what you have to offer and your lowest price and terms. Address Box 615, Canada Lumberman and Woodworker, Toronto, Ontario. 3-8

### For Sale

Established Lumber Business, with first-class mill, now running full time. Timber limits with 20 to 30 million feet of standing pine timber conveniently located, and all merchandise, etc. Price \$55,000. This is worthy of investigation. Address Box 332, Canada Lumberman, Toronto, Ont. 19-22-tf.

### Mill Site and Timber For Sale

Eleven hundred acres (deeded) well timbered, surrounding Raft Lake. Seven miles from Novar, Ont. Excellent winter road. Also four hundred acres (deeded) well timbered, four miles south of Ravensworth, Ont. Each of the above properties will be sold on easy terms. Address Box 711, Canada Lumberman, Toronto, Ont. 4-7

WANTED—Contractors with saw mill, capacity not less than 35 M. per ten hours. Timber all pine averaging about ten to M. logs delivered at mill ready to start at once. Site situated on main line railway one hundred and fifty miles east of Winnipeg, Canada. Good proposition. Apply W. L. McIntosh, Suite 4, Lilac Apartments, Winnipeg, Canada. 4-5

## AUCTION SALE OF VALUABLE TIMBER LIMITS

The co-partnership of "Klock & Brother," for the purpose of winding up their business, will, subject to a reserved bid, offer for sale by public auction at Fraser Bros.' Auction Rooms, No. 453 St. James street, in the City of Montreal, on the 8th of April, 1913, at the hour of three o'clock in the afternoon, those valuable timber berths on the Manouan Branch of the Lievre River, in the Province of Quebec, bearing the numbers 3, 4, 5, and 6, and comprising 196 square miles, more or less. . . . Balance of price and interest to be reasonably secured on limits and products thereof.

These timber berths are held under license from the Province of Quebec, and will be sold subject to the provisions and conditions of said licenses and the laws and regulations of that province relating to such matters. For further particulars apply to—

Casgrain, Mitchell, McDougall & Creelman, Canada Life Building, Montreal.

Johnston, McKay, Dods & Grant, Solicitors, Toronto, Ont.

Aylen & Duclos, Solicitors, Ottawa, Ont.

R. A. Klock, St. John, N.B. 4-7

### For Sale

An up-to-date planing mill and sash and door factory; 150 horse power; in a large town, Western Ontario, Box 721, Canada Lumberman, Toronto, Ont. 5-8

### Sawmill For Sale

On Georgian Bay, near Little Current, close to north shore; practically new, well built and equipped with shingle machinery; over one mile of water front, loading dock and sheltered booming ground; plenty of timber available locally or can be rafted in from north shore or Georgian Bay. Good opening for retail store in connection. This is a splendid chance for millman with small capital; price right. Good reason for selling. Great Lakes Lumber Co., Ltd., Owen Sound, Ont. 5-T.F.

## TENDERS Timber Lands, Saw Mills, Etc.

Sealed tenders, addressed to the undersigned, East Florenceville, N.B., will be received until 12 noon on Tuesday, April 15th next, for the purchase of Timber Lands, Saw-Mills, Lumbering Equipment, etc., as follows:

1. 30 square miles, more or less, Crown leased lands, heavily timbered with spruce, fir, pulpwood, hardwood and cedar, situated on Monquart, Chikitehawk and Tobique Rivers, in the counties of Carleton and Victoria, in the Province of New Brunswick.

2. 15 square miles, more or less, Crown leased lands, heavily timbered with spruce, fir, pulpwood, etc., situated on Salmon River, in the County of Victoria, in the Province of New Brunswick.

3. Two thousand acres, more or less, freehold lumber land, heavily timbered with spruce, fir, pulpwood and hardwood, located in the County of Carleton, in the Province of New Brunswick, and conveniently situated to a railroad.

4. One stationary saw-mill, located at Stickney, in the County of Carleton, N.B., equipped with a rotary, having steam feed, edger, trimmers, lath machine, planer, one 120 horse power engine, two large Robb-Armstrong boilers, separate engine room, located with convenient platforms and switches on the line of the C. P. R., having this railroad on one side and the main St. John River on the other side of the mill.

5. One hardwood factory 40 ft. by 70 ft., with separate dry house, fully equipped with belt, trimmers, four rod machines, pointing machines, one 100 light dynamo, one 85 horse power steam engine, with belting and shafting complete. The factory can be used to manufacture small hardware squares of any dimension, or meat skewers. The mill and factory are lighted with electricity.

6. 3 dwelling houses at Stickney, including a foreman's and engineer's dwelling.

7. Camps in woods, camping supplies, rafting and driving accessories, and general lumbering outfit.

Offers for the entire property, including all the above, or offers, including any one or more of the different numbered parcels as listed, will be received.

Intending purchasers will receive all necessary information by calling on or writing to the undersigned.

The undersigned does not bind himself to accept the highest or any tender.

JAMES POWRIE,

5-7 Assignee, Peel Lumber Co., Ltd.

## Miscellaneous

### Wanted

Three to five miles of 30 to 40 lb. relays for delivery May next. Box 723, Canada Lumberman, Toronto, Ont. 5-7

## Mail Contract

Sealed tenders addressed to the Postmaster General, will be received at Ottawa until noon, on Friday, the 11th of April, 1913, for the conveyance of His Majesty's Mails on a proposed Contract for four years, six times per week, over Rural Mail Route No. 1 from Woodbridge, Ont., to commence at the pleasure of the Postmaster General.

Printed notices containing further information as to conditions of proposed contract may be seen and blank forms of tender may be obtained at the Post Offices of Woodbridge, Humber, Elder's Mills, and at the office of the Post Office Inspector at Toronto.

G. C. ANDERSON, Supt.

Post Office Department,  
Mail Service Branch,  
Ottawa, Feb. 21, 1913. 5-7

A young beaver in Regents Park Gardens, London, was once placed at work upon a tree twelve feet long and two feet six inches thick, just as the town clocks sounded the hour of noon. The beaver began by barking the tree a foot above the ground. That done, he attacked the wood. He worked hard, alternating his labor with dips in his bathing-pond. He bathed and labored alternately until 4 o'clock in the afternoon, when he ate his supper of bread and carrots and paddled about in his pond until half-past 5 o'clock. Ten minutes later, when only one inch of the tree's diameter remained intact, he bore upon his work, and the tree fell. Before it fell the beaver ran as men run when they have fired a blast. Then, as the tree lay on the ground, he portioned it out mentally and again began to gnaw. He worked at intervals all night; cut the log into three parts, rolled two of the portions into the water, and reserved the other third for his permanent shelter. The work done, he took a bath.

Oak veneer has been growing in popularity for more than a decade and it has spread out very rapidly the past few years in both plain rotary cut and in the quartered veneer. By its use manufacturers present the beauties of the oak strikingly and at the same time, improve the structure of the furniture, provided they use it rightly. Manufacturers of veneer are becoming more conspicuous as contenders in the market for the best oak stumpage. Just a few years back the tight stave barrel people were re-

garded as the most formidable competitors of the saw mill men for the best oak timber and they devoured, at a great rate, the cream of many oak forests—at times leaving lots of good timber going to waste in their wake. There are some of them after oak timber yet, but the stave business, which called for the highest grade of oak, has been dragging so for the past year and a half that there has been little seeking for fresh supplies, except by a few fortunate members of the trade who own timber. When the veneer man goes into the woods, he must take a saw mill along, as a part of his plant; or he may stay in the city and buy logs and flitches. Some buy the quarter flitches; others buy logs for both rotary cutting and quartering; still others by timber and have their logs gotten out; some do it one way some another, and with it all the veneer man is becoming one of the most important factors in the scramble for the good oak timber that remains. He is not so conspicuously after it now as he would be if business were a little livelier but he is beginning to overshadow the oak stave man and, if he keeps growing in prominence, it looks as if the time was coming when he will overshadow everyone else in point of prominence where the cream of the oak forests is to be found.

# Review of Current Trade Conditions

## Ontario

The lumber trade in Ontario continues on a firm and steady basis although there has been a slight falling off in the demand for some of the upper grades. This was probably the result of the cold weather which prevailed during the early weeks of February.

There is no uncertainty about the general belief that business prospects for this year are better than ever before. At the present time trade is very good and already shows a bigger demand than last year. One of the factors in this situation is the improved trade in the United States which always has an effect on trade in Canada. Without doubt the demand will considerably exceed the supply and those who have stocks to deliver will have no difficulty in doing all the business they can handle.

In 1912 the medium grade of soft woods especially were not in very good demand, pine being particular noticeable in this respect. However, owing to the excessive demand for the lower grade especially culls there is every reason to expect that the middle grades will move in sympathy.

Weather conditions in many places are still satisfactory but in some districts there is no appreciable quantity of snow and ice and this will have a bearing on the amount of stock to be produced.

In hardwoods, birch is in good demand in all grades. The demand for hardwood culls of all varieties is, if possible stronger than ever. Basswood at the moment is particularly strong. In the districts where elm is produced there is practically no snow, so that this lumber is likely to take a considerable rise in price. Soft elm is in much demand and there does not seem to be a likelihood that there will be sufficient this season to supply the trade.

Apparently many builders have sufficient stocks in their yards to give them a start in their building operations when the season commences, but this stock will not last them more than a month or so. At any rate consumers as a whole appear to be willing to make contracts even at the high prices which are at present prevailing.

## Eastern Canada

Trade in eastern Canada continues unchanged with a good demand in general on account of the active building trade. There is practically no feature of importance to single out for mention. Wholesalers report that the mild weather has been a boon so far as the building trade as concerned. They are troubled however, in securing stock and expect a shortage of common grades of lumber if the building activity continues. These conditions apply particularly to spruce and hemlock the former of which is in very small supply. Logging operations have not been favored with good weather and many discouraging reports have been received. An exceptionally heavy rainfall will be necessary in order to furnish sufficient water for driving operations.

At New York the offerings of eastern spruce have been about on a par with those of a month ago. Mills apparently are unable to accumulate stocks. The top notch prices continue and yards are buying cautiously, watching anxiously for anything in the form of a price concession. Wholesalers report that they are having a little more success in chartering boats than they had a few months ago. Hemlock business is being booked at good prices in New York, although some reports are to the effect that prices have reached their top. Wholesalers report that some sizes are very difficult to find. Most of the yards have fair supplies. On account of the active building business they have been ordering plentifully.

Prices of eastern spruce at Boston remain firm. The sellers have the upper hand and any mill which can get out stock can secure orders at good prices. Spruce boards are scarce and firm. Hemlock is in good demand as usual. Good sales are reported of random hemlock by a mill which was fortunate enough to get its stocks to market. The price secured was a record. The buyer however thought himself lucky to get the stock at all. All kinds of hardwoods are in good demand at Boston. Maple flooring advanced in price a fortnight ago and it is now higher than it has been for many years.

The weather conditions during the early part of February were more reasonable in the Eastern States and Canada, and the natural result was that very little lumber was moved by the yards. In New York City this was particularly noticeable, according to the report of Chas. Talbot & Company, who also state that "arrivals of cargoes of spruce and hemlock from the east could be counted on one hand. The situation therefore, as to the general attitude of the trade, as well as quotations, remains unchanged. Of very recent date we have received more encouraging reports of conditions in the woods in the

east. Yarding and browing of logs has been less difficult, because of frost and snow falls. It is anticipated that the demand for eastern lumber will now be in evidence before April 1st. Our optimism has in no wise waned and unless some unforeseen contingency should arise, the year will furnish good business in the lumber trade."

## Great Britain

A quiet timber trade is reported from London. Generally speaking, stocks are moderate. Deals and battens are in about the same quantity as they were a year ago, while there is considerable reduction in the quantity of floated timber. The consumption also continues moderate as a result of a quiet building demand. Prices are steady in most lines with a tendency towards strength among a few favorite lines in which there are indications of shortage. Reports of forward business are being made. In most cases the basis of these transactions leaves the question of freight rather uncertain. It is still believed to be unsafe to take any chances upon freight rates. The market at present is firm with very few boats offering, although as a rule, at this time of the year, a fair amount of business is arranged at moderate prices. At Foy Morgan & Company's recent auction sale a lot of 3 x 9 and 11 inch unsorted St. John spruce was sold at £11, and 3 x 7 brought £10 and £9 5s.

At Liverpool, trade conditions are still quiet, not having livened up as yet since the new year. In spite of this, the volume of consumption is greater than a year ago. Stocks of sawn pitch pine are quite large, being 638,000 cubic feet as against 256,000 cubic feet in 1912. Stocks, however, are in firm hands and prices are well maintained. Importations of oak waggon scantling have been very small, while the consumption has been greater than usual.

No alteration is reported in the value of spruce deals at Liverpool. Small parcel arrivals by liners from St. John and Halifax are being sold whenever they arrive. Stocks at Liverpool at the end of January amounted only to 2,590 standards. Recent heavy arrivals of white deals from Riga may check the demand for spruce for a short time, but spruce will hold its own for some months to come. The consumption of Canadian pine shows practically no alteration and the general expectation is that prices for next season's importations will be higher than ever, as Ottawa producers are asking higher prices and freight rates continue high.

At Manchester, trade is rather quiet, in harmony with a similar situation in the building trades. There are signs, however, that good trade in the cotton industries will soon make a better demand for timber. Spruce deals have been rather slow of late. Prices have not been any lower but the demand has been dragging. Riga whites have entirely taken the place of spruce deals for case and box making purposes and arrivals of stocks are heavy. Pitch pine is somewhat slower and holders seem to be inclined to push their sales. At Glasgow, arrivals of spruce are still light and those which have come to hand have been easily sold at top prices, the wider specifications being particularly strong. Stocks are light. Yellow pine is still dragging, transactions being generally of an unimportant nature.

## United States

The changeable weather which has prevailed throughout the United States during the past fortnight has brought about a slackening in the business activity in general and the lumber industry has felt the change to a noticeable extent. Previous to that the volume of business during the winter had been making records but it is expected now that the balance of the season will see a normal winter trade on a fairly active basis. With any encouragement in the form of mild weather from now on, an early spring trade is probable. There is already an excellent demand for railroad timber and car construction material of all kinds. Present indications are that the volume of business during the coming summer will be very large, greater in fact than it was a year ago. So far as statistics can be secured the volume of business transacted during the present year to date has been greater than the corresponding period of 1912. It is also generally acknowledged that mill stocks are lower than usual at this time of the year. Conditions throughout are very favorable for prices continuing strong at their present levels.

Loggers in northern Michigan, Wisconsin and Minnesota have been greatly disappointed during the present winter with the very mild weather which has prevailed. Small operators have found it practically impossible to get out their logs. Conditions have been a little better during the last two or three weeks. The large operators however, in most cases use logging railroads so that they will be able to secure their supply during the summer. Reports from the south

## Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

A. F. HOLDEN, Pres.   F. H. GOFF, Vice-Pres.   E. C. BARRE, Gen. Mgr.   W. A. SAURWEIN, Ass't. Mgr.

state that there have been excessive rains especially in the Louisiana yellow pine territory. In eastern Texas very heavy rains have also prevailed. Logging operations have been reduced in these districts, the output being estimated by some as only about 50 or 60 per cent. of normal. Heavy rains have occurred also on the Pacific Coast and have cleared away the snow so that logging operations have lately become much more extensive. In Maine and New Hampshire the spruce and hemlock manufacturers have been having a bad time on account of lack of snow. They are hoping however, for a fair amount of snow in March. Reports upon the northern pine trade indicate that the conditions at present are quite strong. In Minnesota, Chicago and the Tonawandas wholesale yards have fair sized stocks for spring trade although assortments have been considerably reduced during the winter. Dealers are very active in their efforts to keep their stocks filled up. The great demand for hemlock continues and is only limited by the supply. Northern and eastern mills are reported to have come to the end of their dry stocks. In Northern

Michigan and Wisconsin, the sudden ending of logging operations is expected to enhance the prices of hemlock still further.

The hardwood trade continues on a very satisfactory basis with an active demand in nearly all lines. Seldom have conditions been more satisfactory from the manufacturer's point of view. In the south, the input of logs has been reduced by unfavorable weather and no surplus of dry hardwoods can possibly occur during the balance of the present year. With the approaching spring, prices in the south are stiffening. Manufacturers are holding their stocks firmly in anticipation of higher prices. All kinds of hardwoods have been in good demand throughout the winter. From all wholesalers the report comes that it is much easier to sell lumber than it is to buy it. Plain oak is still the leader, but the demand for quarter sawed is increasing steadily. The scarcity of dry southern hardwoods at the mills is helping the sale of northern hardwoods. Birch, maple and elm are selling well at stiff prices and the demand for basswood has increased together with the price.

## Market Correspondence

**SPECIAL REPORTS  
ON CONDITIONS AT  
HOME AND ABROAD**

### Steady Trade at Montreal

Montreal, February 24th. (Special to the Canada Lumberman):—There has been no special feature in the lumber trade to report during the last two weeks. Wholesale lumbermen state that trade is very good, thanks to the mild winter, which has allowed building to go on almost without interruption. The chief trouble for dealers is the scarcity of stock, and if the building activity continues there will be a great shortage of the common grades, with the possible exception of pine. Spruce is in very small supply, and it is certain that consumers will have to pay enhanced prices, for the manufacturers are asking and getting better figures. It is questionable whether contractors will be able to substitute brick for lumber, as there is almost sure to be a bigger demand for bricks than the yards can supply, and this notwithstanding the new plants that are being established.

The weather has been all against logging operations, and reports received in Montreal from different parts of the province speak discouragingly of the operations, owing to the lack of snow. Unless the rainfall is more plentiful, driving will be greatly interfered with in some sections.

A slight improvement is reported in the ground wood market situation. For some time Canadian manufacturers have been selling at about cost, owing to the poor demand from the United States, but they have now decided to pile up their product rather than sell it at such low prices. They believe that the raw wood will be very scarce during the present year, and that, even should water conditions in the United States be favorable, the mills over the border will have great difficulty in obtaining pulp wood. Under these conditions they will be compelled to come into the Canadian market, and with the stimulus of this demand prices are expected to advance. The Canadian mills will thus be able to sell their accumulated stocks at something like reasonable rates.

Chemical pulp is still an exceptionally strong market, and advices from Europe indicate that there will be a shortage in the spring.

### Ottawa Outlook is Encouraging

Ottawa, February 21st.—(Special to the Canada Lumberman).—With the winter of 1912-13 quickly passing and spring trade approaching, another season's building activity has commenced. Lumbermen here are clearing for action. Contracts already let confirm the prediction made some months ago that this is to be a record year for every branch of the building trade. Interviews with several of the leading lumbermen in the city disclose the information that trade was never better for so early in the year as it is at present. The demand is great, they say, and prices are firm. The supply, with the exception of some signs of low grade lumber, is able to meet the demand. Woodworking firms have been busier this winter than they ever were before.

### Exports on the Increase

During the past few weeks there has been a noticeable increase in the export of all grades to the United States and Great Britain.

The Estate of James Davidson will build two large kilns at Davidson, Que., where the sawmills of the firm are located. Each kiln will measure 180 by 130 feet and both will be used to dry lumber for the box factory used in the city plant, at which there are already three large kilns. The same firm will instal a large Mereen-Johnson slab-re-saw in the box factory.

At the hearing of the protest against the new interswitching order

issued to the railways by the Railway Commission recently, which came up last Monday, Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association appeared on behalf of the lumbermen of Canada, who are naturally interested in the order. The railways claim that the order should not compel switching onto team tracks. Mr. J. E. Walsh, traffic expert of the Canadian Manufacturers' Association argued strongly in opposition to the contention of the railways. The case was not settled and will come up again later.

Mr. R. H. Campbell, director of the Forestry branch of the Department of the Interior is advocating the establishment of a series of forest fire protective associations from Gaspé to the Ottawa River. Mr. James Lawler, secretary of the Canadian Forestry Association and Mr. Clyde Leavitt, chief forester for the Railway Commission are urging with Mr. Campbell the more general use of the telephone through the forests so that, in case of fire, help could be summoned quickly.

The Hotel Cecil and Dominion Theatre, on a site considered one of the most valuable in Ottawa were sold a few days ago by the owners, the Estate of James Davidson, to a local syndicate for \$300,000. A 20-roomed apartment house is to built by the purchasers this spring.

### St. John Trade Marking Time

St. John, N.B., February 22nd; (Special to the Canada Lumberman):—Very little of any importance has taken place in the spruce market at this port during the last two weeks, all the mills are idle, and with the coming of cold and snow, building operations have been more or less impeded, which, of course, curtails the sales of lumber from the yards. Building operations will not start again much before the first of April and the local market will therefore mark time. During the last two weeks, about six inches of snow has fallen. This will be of vast importance to the log operators, as they had practically given up hope of any hauling for this winter, but they are doing good work at present. If the snow continues well into March all logs will be hauled from yards to rivers, but it will take at least six weeks of hauling to do it.

Practically all the stocks in yards at mills have been sold, but as the liners are not taking any large quantities of English deals, it leaves quite a lot of deals piled up at some of the different mills. Of course these will practically all be cleaned up in the next four weeks. Shipping to the American market by vessel will begin about March 1.

The markets for spruce, both English and American, are good, and any person having goods to offer at this time is getting good prices. The base price for stocks of spruce delivered Boston points is \$27.00. This is the highest reached for some time. How long this price will be maintained after stock begins to go on the market is a question. The majority of American houses seem to think that the price can be maintained to about \$25.00 until July 1st or thereabouts, at which time it is always natural to expect a dropping of prices on account of hot weather, which impedes the building operations. Last year prices continued good right through the season, and no slump occurred during the hot weather.

American buyers are offering for short spruce random about the following prices:—2 x 3 and 2 x 4, sized 1 edge, \$16; 2 x 6, \$16; 2 x 8, \$17.50; 2 x 9, 2 x 10, \$18.50; 4 x 6, \$16; 6 x 6, \$16; 6 x 8 and 8 x 8, \$18 to \$19 on sellers' wharves, with refuse lumber at about \$11.50 per thousand on wharves at mills here.

Column Base, Shaving Chute, Steel lipped and ground Tables and Safety Cylinders are a few features. Machines carried in stock by

A. R. Williams Machinery Co. of Toronto, Ont.

**C. O. Porter Machinery Co.**  
Grand Rapids, Mich.

The English buyers are making every effort to buy up the cuts of different mills here, but to date have not been able to make the price quite attractive enough to produce any great amount of selling. For early delivery of deals, say April, May and June, rotary sawn, the buyers are paying about \$16 for specifications of three inch running fifty per cent. 7 and 8 x 3, balance 9 x 3 and up to average 13/14 feet; for 3 x 4 and 3 x 5, \$13.50; 3 x 6, \$14; ends and fourth quality at reductions of \$4.50 to \$2.50 respectively.

For city cut stock they are not offering anything above the prices being paid for rotary cut stock, which is quite unusual, as city cut stock always demands from \$1.00 to \$1.50 per thousand more than rotary sawn.

Laths are being sold at \$2.85 to \$3.00 on wharves, as stocks are almost impossible to obtain.

The box business shows the usual falling off, as practically all the packing houses are waiting for the opening of spring, but no stocks of shooks are being accumulated.

### The Maritime Lumber Trade

The open weather we have had in such profusion this winter will no doubt be the cause of more or less unsatisfactory results in lumbering, says the Maritime Merchant. The point that has seemed to be uppermost in the minds of most people when discussing this threadbare topic has been the bad influence of the frequent and persistent spells of open weather on operations in the woods. With swamps filled with water and the ground entirely soft, it became increasingly difficult to carry on work—absolutely impossible to get any logs out. For the very first requirement of successful lumbering is that the swamps must be frozen and the ground hard and that over all there must be a covering of snow—but not too much snow. These primary factors have been absent; consequently some operators have had to take their men out of the woods, while some, we dare say, had never got so far as to send any in.

Meantime the situation in the export market has vastly improved, though the competition of Baltic lumber is being felt this winter to some extent. There is a possibility that its influence may yet become more marked. Ordinarily Baltic lumber is not a conspicuous factor in the winter season, because the Baltic itself is frozen up; but this year the same climatic influences that exist here, prevail there, with the result that large shipments are being made from Riga. Notwithstanding this the local shipper could still do a better business with the Old Country, because the market is much stronger than it was a few months ago and freights are considerably lower. But unfortunately shippers have trouble locally in getting lumber to ship. Meantime the local conditions do not seem to favor getting out a very big cut this winter, so that material available for shipment will be possibly smaller than usual next summer.

The prospect is that freights will become more favorable, both to the Old Country and the United States. The northern part of New Brunswick is the only part of the Maritime Provinces where they are having weather conditions suitable for lumbering. In southern New Brunswick, conditions are as they are in Nova Scotia, with the result that shipments to the United States are smaller than usual and freights are not so high as a few months ago. The American lumber market has improved greatly. Generally speaking the market situation is much improved as compared with last summer, but unfortunately present conditions do not favor the prosecution of the industry.

### Tonawanda Trade Cheerful

North Tonawanda, February 24th. (Special to the Canada Lumberman):—There is a decided tone of expectancy in the local lumber market that refuses to give way to an underlying current of pessimism. Local dealers are cheerful over the prospect for the next few months but most of them want to know what the other fellow thinks of business conditions generally and in the lumber trade particularly. With President-elect Wilson inaugurated and his cabinet announced there is little doubt that things will begin to move along better and there will be less tendency to hold off. Things may wait a little while longer to see just what the new Democratic tariff bill shows in the way of revised schedules, but it is so certain that lumber will be put on the free list that the local trade is prepared to discount any effects of the lumber schedule. But business generally is not so certain of other revision and until the bill is actually on the statute books the lumber trade will be affected by the tendency to hold off in other lines of business activity. There is no sign of alarm, however. The lumber trade and business generally is prepared to take care of whatever happens after Congress and the President get settled down to business. This is due more than anything else to the reassuring comment of both the President-elect and Congressional leaders that no honest business effort need be afraid of what is going to happen either to the tariff or in the prosecution of combinations of capital.

Mr. Seward H. Milliner, son of George H. Milliner, a veteran

lumberman of the Tonawandas, whose interests have been largely in Canadian territory, has taken the place in the Batt Brothers' Lumber Company vacated by the death of the late Irenus Batt. The other directors are Raymond and Norbert Batt, both of this city.

Local dealers have been advised that nearly every foot of lumber in the Duluth district, ready for spring delivery has been sold. The Edward Hines Lumber Company recently bought six million feet of Norway pine. Ten million feet of white pine, sawed at Duluth, will go to Chicago as soon as navigation opens. The output of low grades in the entire Duluth-Superior district is practically all sold.

Letters of administration have been issued in the estate of the late Levant R. Vandervoort, a leading local lumberman whose death was reported in our last issue. The chief legatee is the widow. Mr. George B. Vandervoort, a brother, who has since died, was left \$5,000. It is believed that the estate will inventory close to a quarter of a million. The business of Smith, Fassett & Company will be continued under the same name as before Mr. Vandervoort's death.

Local dealers are speculating as to the effect on prices of lack of snow in some of the logging districts. The mild weather has made it difficult to get the logs to the mills. The unusual conditions have added greatly to the expense of cutting and there is fear that prices may be boosted to make up the deficiency. Local dealers in Canadian lumber say they have had no reports of lack of snow, from their sources of supply.

Canadian lumber continues hard to get and local dealers who were able to contract for liberal purchases for spring and summer delivery are congratulating themselves. The prospect of the duty on Canadian stock being removed is probably holding considerable of the lumber in Canada and definite knowledge of the tariff schedule will no doubt clarify the situation to a large extent. Prices at the mills are going up if anything and there is little prospect of a drop in the market unless imported stock is sufficient to bring down prices. Local dealers who have been in the west since January 1st looking for stock say that lumber is going to be so scarce that all the Canadian or other lumber that might come in would scarcely cause a ripple.

Lumbermen in the Tonawandas are speculating as to the schedule of rates which the Lumber Carriers' Association adopted at its recent Detroit meeting. Secrecy is being maintained so that independent vessel owners may not have the benefit of the information as to rates in the making of their contracts. Last year the independents were able to crowd out many of the Lumber Carriers' vessels so that the latter were idle a considerable part of the season. It is the general opinion locally that the Lumber Carriers' rates are not the same as last year and that an increase will be noted when the schedule is given out.

### Quebec Stocks are Low

The Timber Trades Journal, London, Eng., in a recent issue, referring to the Canadian market, says:—

"The cuts of Canadian pine deals have been disposed of as follows:—The Hawkesbury Lumber Co. have sold theirs to W. & J. Sharples; J. Burstall & Co. and Robt. Cox & Co. each take half of Booth's deals; Watson & Todd have secured Edwards' deals; whilst the Wayagamack cut, which is the old Baptist cut, of Three Rivers, has been sold to J. Burstall & Co. With regard to spruce, Breakey's cut has been sold to H. R. Goodday & Co., of Quebec, whilst the others have also gone into the usual hands. The low stocks of pine, spruce and timber in Quebec probably set a record, though the exact figures are not yet to hand. These are being rapidly disposed of, and a scarcity is already making itself felt. With regard to fresh supplies, it appears likely that all hardwoods, such as oak, elm and birch, will be in very moderate quantity, the winter having been an extremely bad one for the manufacturers. Of waney pine the supply is likely to be lighter than last year, and there are, we understand, a great many lots of inferior quality, containing an unduly large percentage of second-class wood. It appears unlikely that there will be more than sufficient to meet the moderate demand. We are informed that the fresh supply of pine deals will also be light, and owing to the fact that the Americans are buying heavily of spruce, there is little possibility of the last-named wood going begging—in fact, shippers appear to anticipate higher rather than lower prices. The market for the upper qualities of pine sidings has been slightly interfered with by substitutes, but after a trial these as a rule appear to be found unsatisfactory, and the buyers generally return to pine, high though the price may be.

The Montreal Board of Trade have passed a resolution expressing the opinion that the shortage of steamship tonnage from Montreal and other Canadian ports is largely attributable to the additional cost of marine insurance on the hulls and steamers and the cargoes of steamers trading to and from Canada, as compared with the low rates current from American ports, and that steps should be taken by the Dominion Government to overcome this difficulty.

## Ontario

J. J. Smith and Son, lumber dealers, Hamilton, Ont., recently suffered loss by fire.

R. Truax & Son, Walkerton, Ont., are arranging to install a solid cement, fireproof dry kiln with a capacity of 100,000 feet of lumber.

The fourth mill of the Lake Superior Paper Company has started operations, bringing the total capacity of the mills up to 60,000 tons per annum.

The township of Brant, Ont., has called for tenders for 15,000 feet of cedar lumber. Tenders should be addressed to Mr. M. A. McCallum, clerk of the township of Malcolm, Ont.

A. A. Lees, 47½ King street east, Hamilton, Ont., has under consideration the erection of a lumber mill on the mountain top, at a cost of \$6,500. The site has already been purchased.

The planing mill belonging to J. J. Smith and Sons, Sherman avenue, Hamilton, Ont., has been destroyed by fire. The machinery was also destroyed. The loss being between \$10,000 and \$12,000.

Wm. Croft & Sons, Limited, have been incorporated with a capital stock of \$400,000, to manufacture and deal in logs, lumber, timber, wood, etc., with head office at Toronto. The incorporators are C. D. Magee, J. S. Lovell, and Wm. Bain, all of Toronto.

The London Lumber Company, Limited, has been incorporated with a capital of \$40,000 to carry on business as dealers in timber, lumber and wood, with head office at London, Ont. The provisional directors are F. E. Harley, lumber dealer, and C. R. Hoare, of London.

The Hoyle Lumber Company, Limited, has been incorporated with a capital of \$120,000 to manufacture and deal in lumber and timber and all wood products, with head office at Morrisburg, Ont. The provisional directors are G. L. Brown and W. A. Brown, Chesterville, Ont., and S. J. Martin, Kemptville, Ont.

The Standard Lumber Company, Limited, has been incorporated with a capital of \$100,000 to carry on business as lumber and pulp manufacturers in all its branches, to build dams, piers, docks and timber slides, and erect saw and planing mills, etc., with head office at Sturgeon Falls, Ont. The provisional directors are A. G. Robertson, J. J. Kew and E. R. Maltby, of Toronto.

About two hundred men are at work upon the property of the Abitibi Pulp & Paper Mills Limited. It is expected that the plant will be on a producing basis early next year. The company have three water falls, all close together, with a total available power of 57,195 shaft horse power. A branch from the Temiscaming and Northern Ontario Railway will be running to the mill next June.

The Canadian Creosoting Company have purchased about thirty acres of river front property at East Trenton, Ont., from the Gilmour Door Company, upon which they propose to erect a plant which will cost about \$200,000, and give employment to over one hundred men. The company will have a large output of railroad ties and will also use much lumber for making wooden paving blocks.

The Ontario Paper Company's plant at Thorold, Ont., will commence to operate early in June, and will have a capacity of 110 tons of newsprint per day. The concern is owned by Medill McCormick, a Chicago publisher, and the proprietor of the "Chicago Tribune," and its entire output will go to supply Mr. McCormick's papers. The plant will be fed from Anticosti Island. Shipments to Thorold will be made entirely by water via the St. Lawrence River, Lake Ontario and Welland Canal.

## Eastern Canada

Boisseau and DePeyre, lumber dealers, Quebec, P.Q., are reported to have dissolved.

R. Emard and Company, lumber dealers, Montréal, Que., are reported to have dissolved.

Smith, Marvin & Company, lumber manufacturers, Bedford, P.Q., have secured provincial registration.

Benoit & Sons, sash and door manufacturers, Montreal, Que., are reported to have dissolved. A. Benoit is continuing under the same name.

The St. Maurice Lumber Company, Gaspé, Que., has purchased the Gaspé Lumber and Trading Company. A large sulphite mill will be built.

A small fire occurred recently in the third floor of the lumber mill of William Rutherford & Sons Company, Limited, Atwater avenue, Montreal. About \$3,000 dollars' damage was done.

Finch, Pruyn & Company, Incorporated, Glen's Falls, N.Y., propose building, during the coming season, a lumber and sulphite mill on the south shore of the St. Lawrence between Three Rivers and Quebec.

Albert E. Reid & Company, of Newfoundland, have offered in the London money market £100,000 five and one-half per cent. first mortgage debentures at 95, the proceeds of which will go to develop the Newfoundland pulp and paper industry.

The Belgo-Canadian Pulp and Paper Company, of Shawinigan Falls, Que., has just acquired 500 square miles of timber limits known as the Metabetchouan holdings, and the consideration is said to have been \$500,000. The property was purchased from Messrs. Sharples, Power and Calvin.

The Partington Pulp and Paper Company is reported to have decided to erect a pulp mill at Marysville, N.B., early in 1913. Mr. George McKeen, of St. John, N.B., and others, have purchased for \$60,000 the lumber mill and timber areas of Isaac C. Prescott, in Albert County, New Brunswick.

Plans for the pulp and paper mills to be established at Grand Falls, N.B., by the company of that name, of which Sir William Van Horne, of Montreal, is the leading spirit, have now been completed, and will shortly be decided on by the directors. The plans give alternate plans for bringing waters to

the turbines, one being by means of a tunnel through the solid rock, about 1,000 feet in length, and the other a canal of the same length. There is a difference of about one million dollars in favor of the latter plan.

It is officially announced that the Dominion Steel Company will not rebuild their saw mill at Dalhousie, N.B., for the present, but have given a sawing contract to an independent mill, which will handle the stock of logs. The company's stave mill has been rebuilt and enlarged, and, has been working with little interruption. Although operated on a fairly large scale, and providing the neighboring district with a market for all the bolts that can be brought in, the company have had to place large orders for staves elsewhere. Their consumption for the year will exceed 5,000,000 staves.

William Price, head of the firm of Price Brothers, the well-known pulp and paper manufacturers, speaking in his capacity as president of the Quebec Harbor Commission, declares his belief in the winter navigation of the St. Lawrence up to Quebec. If this is made possible it will mean much for the development of the pulp wood industries along the north and south shores of the river, where everything is now shut in for about six months in the year. He states that he is urging the government to inaugurate a mail service by steamer along the north shore in order to test the feasibility of winter navigation.

Mr. Harry Patton, of Patton & Company, 86 State street, Albany, N.Y., has disposed of most of his timber interests in Newfoundland. He with others organized under the name of New Land Lumber and Pulp Company, Limited, developed a tract of over seven hundred square miles on the Exploits River, building a large mill at Norris Arm, where they have been manufacturing large quantities of pine and spruce lumber since 1902. A few years ago the Albert E. Reed Company, paper manufacturers, of London, England, started the erection of a large ground wood pulp mill at Bishops Falls. They have lately acquired the property belonging to the New Land Lumber and Pulp Company, Limited, Mr. Patton continuing, however, under the name of Henry Patton & Company, Limited, to manufacture at Norris Arm all the pine on this tract.

The Newfoundland Power and Pulp Corporation is a new organization composed of New York and Pennsylvania interests, which will have its headquarters at Elmira, N.Y., and develop pulp operations in New York, Pennsylvania and Newfoundland. The company is capitalized at \$100,000, divided into 1,000 shares at \$100 a share. The principal officers of the corporation will be in Elmira, and they will deal in timber, timber lands and maintain mills for the manufacture of lumber, pulp and wood products in New York, Pennsylvania and Newfoundland. Following are the directors: E. Sherwood, of Odessa; T. M. Archer, of Crooked Creek, Pa.; R. W. Field, of Wellsboro, Pa.; C. W. Sheldon, of Tioga, Pa.; J. A. Latzer, of Wellsboro, Pa.; T. L. Woodward, of Tioga, Pa.; B. A. Gee, of Sabinsville, Pa.; F. B. Smith, of Blossburg, Pa.; J. Hotchkiss, of Lawrenceville, Pa.

#### Western Canada

S. McClain, lumber dealer, Carman, Man., has been succeeded by McClain & Sons.

The Security Lumber Company, Wolseley, Sask., has been succeeded by the Beaver Lumber Company, Limited.

The Gas City Lumber Company, Medicine Hat, Alta., are reported to have sold out to the Riverside Lumber Company, Limited.

The Booth Logging Company, Limited, has been incorporated, with head office at Vancouver, B.C., and a capital stock of \$100,000.

Broderick and Bascom Loggers Supply Company has been registered under the British Columbia companies act, as an extra-provincial company.

The Upper Fraser River Lumber Company, Limited, 526 Board of Trade Building, Montreal, have commenced work upon the erection of a large saw-mill at Edmonton, Alta.

The capacity of the plant of the Powell River Pulp and Paper Company, in British Columbia, is to be increased from one hundred tons of paper per day to two hundred and forty-nine tons, immediately.

The Grain Growers' Grain Company, Winnipeg, Man., is reported to have purchased timber limits near Fort George, B.C., comprising 300,000,000 feet, at a price averaging \$1.50 per thousand feet. It is reported that the intention of the Grain Growers is to hold this as a reserve supply, with the idea of establishing lumber yards at different points in the province for the purpose of supplying farmers and settlers with lumber at reasonable prices.

Construction is to be started in May on the Burrard, Westminster, Boundary Railway & Navigation Company's line between Vancouver and Mission Junction. This will be an electric line, though steam engines will be used until completion is effected. John Hendry, Vancouver, B.C., is interested in the concern. The company has concluded contracts for the transportation of an immense amount of logs from lands in the vicinity of Stave River and Stave Lake, one timber berth being estimated to contain 15,000 carloads. The logs will be brought as far as the Pitt River and there put into the water and towed to mills on the Fraser River.

#### Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing to the Department of Trade and Commerce and stating the number of the enquiry.

1242. Lumber.—A Lancashire firm makes inquiry for the names of Canadian firms able to supply short-end lumber in 500 and 1,000 ton lots, suitable for the box-making trade.

A study of the forest areas between Lake Superior and the Eastern terminals of the C. P. R. is about to be made by the forestry experts of the company. Growth and increment data is to be gathered in the different timbered districts. The C. P. R. are seeking the co-operation of the Provincial Governments and also that of the Dominion Government in this work. Figures and facts of importance in conserving the forest areas will be carefully gathered. The information should be of great value in view of the increasing consumption of lumber.

# The Properties of Hemlock Timber

## Report by U.S. Forest Service Indicates Probable Increase in Demand for This Wood

A bulletin upon the Mechanical Properties of Western Hemlock, prepared by O. P. M. Goss, Engineer in Forest Products, has been published by the Forest Service of the United States. The bulletin deals extensively with the various properties of western hemlock, giving the results of a large number of tests which have been made upon this wood. The conclusions reached as a result of these experiments are as follows:—

(1) The results of tests made by the Forest Service on Douglas fir, western hemlock, and western larch show the following strength ratios for green stringers of all grades:

|                           | Per cent. |
|---------------------------|-----------|
| Douglas fir . . . . .     | 100.0     |
| Western hemlock . . . . . | 88.0      |
| Western larch . . . . .   | 81.7      |

(2) The strength of beams is influenced by the size, condition, and position of knots. Knots in the middle half of beams near the lower edge have the greatest weakening effect. Knots in the middle half near the top have a slight weakening effect, while the knots near the center of the middle half, or anywhere near the ends, have practically no effect on the strength.

(3) The strength of posts or columns containing knots decreases as the knots increase in size.

(4) Sound knots do not weaken wood subjected to compression perpendicular to the grain.

(5) Rot spots are serious defects in western hemlock from the standpoint of both strength and durability.

(6) Wind shakes, cross grain, and spiral grain decrease the strength of stringers in proportion of their extent; if very evident, their effect is serious.

(7) Clear, seasoned stringers of western hemlock may be expected to show 25 per cent. more strength than similar green stringers. It is not advisable to depend on an increase in strength due to seasoning in stringers with defects.

(8) Large specimens tested in compression perpendicular to the grain show but little increase in strength due to seasoning.

(9) The strength of small, clear pieces tested in bending or end compression is increased two to three times by seasoning.

(10) Horizontal shear failures are much more likely to occur in seasoned than in green stringers on account of the formation of checks in the shear-resisting area (neutral plane) during seasoning.

(11) Western hemlock bridge stringers seasoned in the vicinity of Seattle for about one year will reach a condition of practically constant weight (17 per cent. moisture), and in this process lose from 15 to 20 per cent. of their weight, and decrease 3 to 4 per cent. in volume.

(12) Measurements on small, clear specimens show that in passing from a green to a thoroughly dry condition western hemlock shrinks 5 per cent. in a radial direction, 8.4 per cent. in a tangential direction, and 0.08 per cent. in a longitudinal direction, a total volumetric shrinkage of 13.8 per cent.

(13) The rate of growth can not be depended upon to indicate the strength of structural timbers containing weakening defects. In small pieces without defects, the greatest strength was found in sticks having from 12 to 20 rings per inch.

(14) The strength of small, clear specimens increase in direct proportion to an increase in dry weight. This is also true in some degree for large timbers with minor defects, but is not the case in material with defects that influence the strength.

### Structural Uses

The demand for western hemlock both in the form of ordinary lumber and for special uses will no doubt increase when its properties are better known. At present it has a very poor market standing because of the prejudice against the name "hemlock." The lumber is practically free from pitch, has a handsome grain, takes paints and stains well, and works smoothly, both spring and summer wood standing up well to the cutting edge. It is at present manufactured into the common forms of lumber, and is also used for pulp, boxes, barrels, sash and door stock, fixtures, furniture, and other special uses. In the form of lumber western hemlock is often mixed with Douglas fir and is sold and used for the same purposes. It is only a question of time when western hemlock will be sold under its own name and on its own merits.

**Durability.**—Authentic data are lacking with regard to the durability of western hemlock as compared with Douglas fir and other woods. The general impression is that Douglas fir is more durable than western hemlock. A few experiments made to determine the adaptability of western hemlock to treatment with liquid preservatives indicate that, as compared to Douglas fir, it offers about the same

resistance to impregnation across the grain; but that it is easier to penetrate along the grain.

**Bridge and Trestle Timbers.**—Western hemlock is well suited for use in all but the heaviest construction work, as shown by results of the tests discussed in this bulletin; but up to the present it has had a limited use in bridges and trestles. It has been used in some instances for caisson construction.

**Crossties.**—A considerable amount of western hemlock is cut into crossties. Many of the western railroads use Douglas fir, western larch, redwood, and western hemlock almost exclusively for tie material. A large percentage of these ties are laid without preservative treatment.

**Poles and Piling.**—Occasionally western hemlock is cut into telephone or telegraph poles, but its use in this form has been very limited. It has the requisite strength for pole use and grows in such dimensions as to make it very suitable for this class of work. With a good butt treatment with some efficient preserving fluid it should give good service as a pole material.

Though practically all piling in the Pacific Northwest is of Douglas fir, western hemlock is used to a limited extent, however, for this class of work and has apparently given satisfaction.

**Framing.**—In house construction western hemlock is used a great deal as a framing material. For this class of work it serves as well as Douglas fir, and locally commands the same price. Western hemlock dimension stock in cargo shipments commands a lower price, however, than Douglas fir, because of the prejudice which exists against it.

**Flooring.**—Western hemlock, when cut edge grain, makes an excellent flooring material. It finishes smoothly on account of the uniform texture of the wood and it also wears evenly. It is not suitable for use in damp places on account of its tendency to warp under such conditions.

**Inside Finishing.**—As a finish lumber western hemlock has the advantage of containing practically no pitch; it has a beautiful grain, works smoothly, takes stain readily, and, when properly dried, will not shrink or swell materially under normal conditions. It presents a comparatively hard surface and consequently does not mar easily.

**Lath.**—Western hemlock slabs and edgings are manufactured into lath, and as a lath material it is equally as valuable as Douglas fir or other woods. In this form there is no distinction made as to species, all pieces of a suitable form to make lath being thrown in together and used indiscriminately.

**Barrels and Boxes.**—Western hemlock is used to a large extent for barrels and boxes for shipping foodstuffs. For this purpose it serves admirably, since the wood is odorless and tasteless. Its strength and lightness also add to its value for these uses. It has some tendency to split when nails are driven into it, but this fault may be largely overcome by the use of fine nails.

### Exaggerated Dam Story

What is purported to be an interview with the Hon. S. N. Parent, president of the Streams Commission of the Province of Quebec, has been published lately, in which Mr. Parent is reported as saying that the dam which the commission is undertaking to construct on the St. Maurice River, on behalf of the Government, will be three times as large as the Assouan Dam on the Nile, which is now the largest dam in the world. Mr. Parent must have been misquoted, for whereas the proposed dam on the St. Maurice River will cost \$1,250,000, and form a reservoir with a capacity of 150,000,000 cubic feet of water, the Assouan Dam cost \$24,000,000, and results in a reservoir with a capacity of 35 milliards of cubic feet of water. The dam, however, will undoubtedly be one of the largest on the continent, and will have an important effect on pulp and paper and other industries on the St. Maurice River. According to present plans, contracts for the work are to be called in the spring, and the dam will take at least three summers to construct. It will be situated at the town of La Loutre.

### The Science of Timber Valuation

An interesting booklet upon timber land valuation, compiled by James D. Lacey & Company, Chicago, Portland and Seattle, and published by The American Academy of Political and Social Science, has recently been sent to us with the compilers' compliments. The booklet is one which will be useful to all who are interested in timber lands; and capitalists who are seeking profitable investments. It would not be practical to review the booklet in a few lines, but the same object will be secured by stating that the booklet gives a forcible presentation of a truth which is rapidly being accepted by the lumber industry, namely: that success in future lumbering operations will depend more than ever before upon scientifically accurate estimates of the available supply of growing timber, and upon enlightened methods of directing woods operations, both of which may be ensured by securing the services of responsible firms of timber valuers.

Do you **Guess** or do you  
**KNOW**  
 the length of service which you get out of  
 your belting for every dollar which you  
 have invested in this necessity?

# "AMPHIBIA"

**Waterproof Leather Belting**

**Costs Less Per Day of Service**

Therefore, when you get right down to figuring your belting expenses on the proper basis of *service* per dollar invested you will find "AMPHIBIA" the least expensive belting you have ever used.

Yes, and it's as waterproof as mortal man can make leather waterproof, being made especially for sawmills, pulpmills and other plants handling wet or green lumber.

## Whole Business Section of Town Roofed With J-M ASBESTOS ROOFING

In the city of Coshocton, Ohio, practically every good business block and factory erected or re-roofed within the last 15 years is covered with J-M Asbestos Roofing.

The American Art Works—with about 4 acres of roof space—has covered all its buildings with J-M Asbestos Roofing. So has the James B. Clow & Sons Company, with nearly 3 acres of roof, and the H. D. Beach Co., with nearly 2 acres of roof. Likewise, the Pope-Gosser China Co., Coshocton Brick Co., Coshocton Glove & Garment Co., Hunt-Crawford Corrugated Paper Co., Hay Huston Axle Co., Coshocton Ice & Cold Storage Co., Novelty Advertising Co., and others too numerous to mention.

Could we induce such shrewd business men as the heads of these mammoth manufacturing plants to use J-M Asbestos Roofing if it had not given their next-door neighbors entire satisfaction?

The business men of Coshocton, as well as in all parts of the country, have been so unanimous in adopting this ready-to-lay stone (asbestos) roofing, because we have proved to them, as we can also prove to you, that it affords perfect fire protection; that it contains nothing that can rot, melt, crack or deteriorate with age; and that, because of its long life and the fact that it never needs coating or repairs, it costs less per year of service than any other roofing.

J-M Asbestos Roofing is suitable for all types of buildings.

Write our nearest Branch to-day for Catalog No. 303 and our special proposition to dealers.

## Do you know why a Genuine Balata Belt can be made stronger than rubber?

We have a very interesting little book, telling about the origin of Balata, where it is obtained, and how manufactured. This book is free.

MONTREAL, Unity Building

# GOODHUE BELTING

For

## Saw and Planing Mills

In a Goodhue Belt you get only the best leather with most of the stretch taken out of it. A Goodhue Belt will always run evenly and "clings" to the pulley transmitting 100% of your power.

For the wet places in the mill we have a special waterproof leather belt—"Acme". Other Goodhue Belts are "Extra" and "Standard" recommended according to the conditions under which the belt has to run.
